Handbook

Part no 01 90 9 791 000

Effective: March 2000

What can the TIS do?

The TIS is a collection of BMW workshop documents and contains an electronic Databank for Searching Documents and a Program, which can display the desired Documents. On one CD, over 500 information packed documents are stored.

No more searching through paper manuals to find the proper service manuals and this information is regularly updated by BMW in the form of a new CD

The TIS is up to date and allows you to search for the correct information fast and accurately no matter what questions may arise from the workshop.

Using modern computer technology, information is found and presented within seconds, time wasted leafing through sheets is gone. The TIS is so user friendly that everyone can use it even if they have no computer knowledge or experience.

The TIS is displayed on user interface screens and layouts which contain selection lists or instructions.

The Documents Included

In the TIS at the moment, the following documents are included:

- Hotline-Information (from 1/1996)
- Service Information (important older from 1986, all new from mid 1995)
