

E36B Manhole Camera(laser optional)

For pipelines, wet wells, manholes, tanks, vessels

E36B is designed to facilitate rapid inspections of tanks, manholes, tunnels, sewer mainline and other lateral pipelines facilities.

This robust unit allows for one man operation with a scalable telescopic rod.

The pole camera is integrated with high-intensity dimmable LED lights, which can provide better proportioned illumination. These lights last much longer than standard halogen and HID bulbs.

The camera sensor features 36 x optical zooming function, capable to capture pipe details from a distance up to 80m. The camera body tilts automatically up 45° and down 45°.

If desired, a laser ranging can be mounted. The manhole camera is made with our strict quality control system to guarantee its water-resistance and explosion-proof for inspections in sewer, water, and waste mainlines, ducts and pipes.

Advantages at a glance

- Portable, single-operator manhole camera
- Advanced EX-view HAD CCD camera sensor
- Detect distance: up to 80m
- All featured display & control monitor
- U-shape probe guarantees better image stabilization
- Adjustable Super Bright LED illumination
- Automatically tilt: up 45°; down: 45°
- Powerful zoom: 36×optical zoom; 12×digital zoom
- 5.7" TFT monitor
- 700 TVL horizontal resolution
- Telescopic rod with length up to 6.7m(9/12m optional)
- Snapshots and video capture
- Text overlay
- Waterproof (IP68)

Optional Parts

Laser Ranging

Scalable Pole

9/12M

Rechargeable Battery

8500mAH
