NS Series

Bright Touchscreens Offer Real Value and Flexible Application
Provides the functions sought in new displays

Features

- 5.7 to 15 inch sizes are available.
- A hand-held version of the NS5 is now available to perform operations at the production site. The NS-series HMI's have a complete set of functions that can be used at the production site.
- The Smart Active Parts (SAP Library) makes it easy to connect to OMRON PLCs and components, OMRON provides a development environment that requires with no programming and no screen designing.
- When an error occurs in a Unit in the OMRON PLCs, the Troubleshooter SAP Library provides an easy-to-understand explanation of the cause of the error as well as the countermeasures.
- Ladder Monitor come as a Standard Feature. The ladder program can be monitored onsite without a laptop! Ladder monitor lets you monitor PLC program status, search for addresses or instructions, monitor multiple I/O points, and much more.
- Provides the FA integrated tool package "CX-One" for a Screen Design Software Integrated Simulation come as a Standard Feature. The integrated simulation function simulates ladder programs and screen data simultaneously even without the actual hardware.
- Screens support 42 languages and the Support Software supports eight. System messages can be displayed in eight languages.
- Single Port Multi Access (SPMA) come as a Standard Feature. The ladder program and screen data can be transferred from a single port!
- Connectable PLCs and devices appear one after another.
Has become connectable with the PLCs of Mitsubishi Electric Corporation and the Inverters of OMRON Corporation.

NS Series

Network

Provides serial NT Link communications supporting both 1:1 and 1:N connections. The NT Link has more efficient communications than Host Link and its capabilities are especially apparent in applications with multiple HMIs connect to the PLC. The NS-series HMIs can also support communications with multiple PLCs and multiple NS-series HMIs through Controller Link and Ethernet connections, so the network can be configured freely to match the requirements and scale of the application. In addition, using the NS-Runtime makes it possible to monitor machine status and log data from the host.

[Example NS-series Network Configuration]

Configuration of CJ2 series, NJ series and NX series

1 EtherNet/IP Connection (Tag accesses)

If an Ethernet-compatible NS-series HMI is used, the HMI can connect to a Controller with built-in EtherNet/IP and an Option Unit is not needed to connect at the HMI.

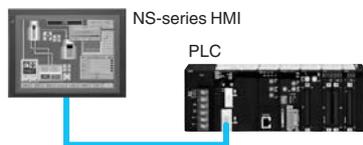

Configuration of CS series, CJ series and CP series

2 Serial connection

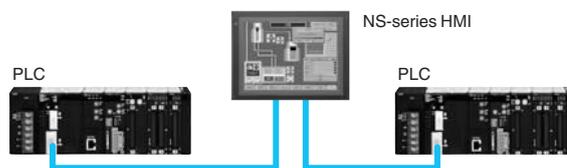

1:1 NT Link or Host Link

●NS:PLC = 1:1

Connecting with the PLC through port A or port B

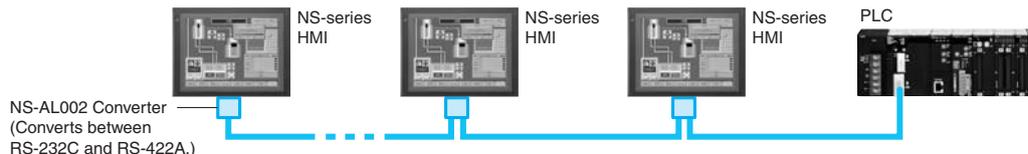

●NS:PLC = 1:2

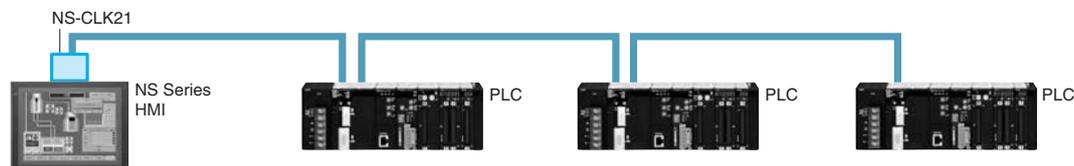

1:N NT Link

●NS:PLC ratio = 8:1 max. Up to 8 NS-series PTs can be connected to each of the PLC's RS-232C/RS-422A ports.

3 Controller Link Connection

The HMI can be connected to an OMRON Controller Link network by mounting a Controller Link Interface Unit.

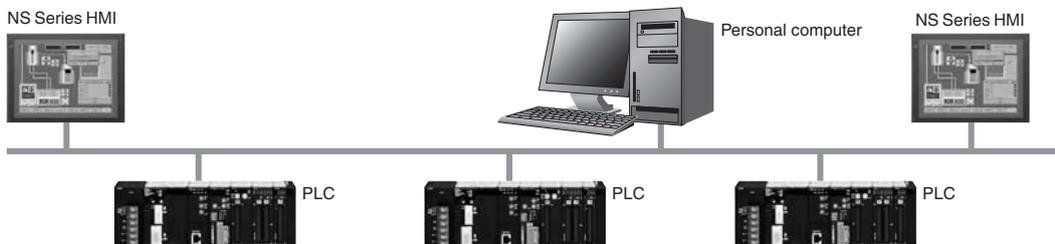

If a ControllerLink connection is used, data links can be set between PLCs, and multiple PLCs can be monitored/set from the NS-series HMI's screen.

- Baud rate
2 Mbps (500 m max.)
1 Mbps (800 m max.)
500 kbps (1 km max.)

●Max. number of nodes: 32 nodes

4 EtherNet/IP or Ethernet Connection

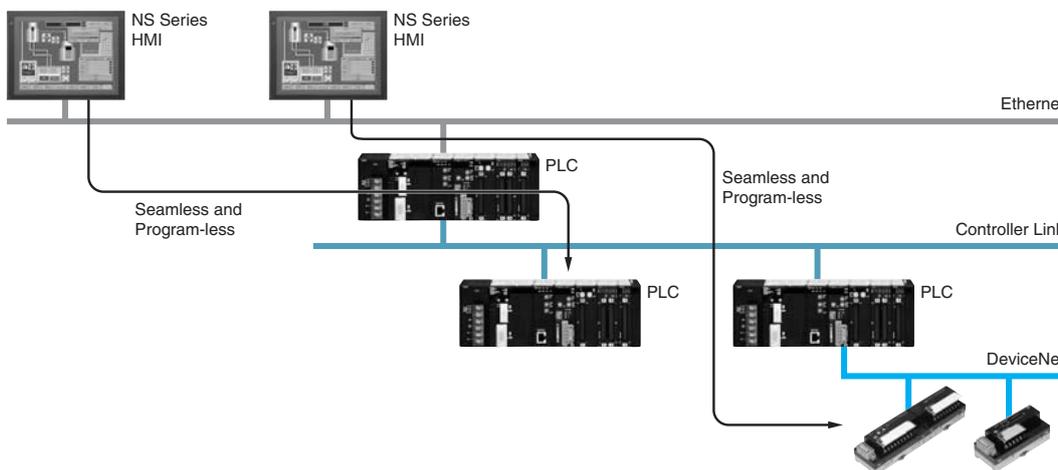

If an Ethernet-compatible NS-series HMI is used, the HMI can connect to a PLC with an Ethernet Unit and an Option Unit is not needed to connect at the HMI.

5 Connections Over Network Levels

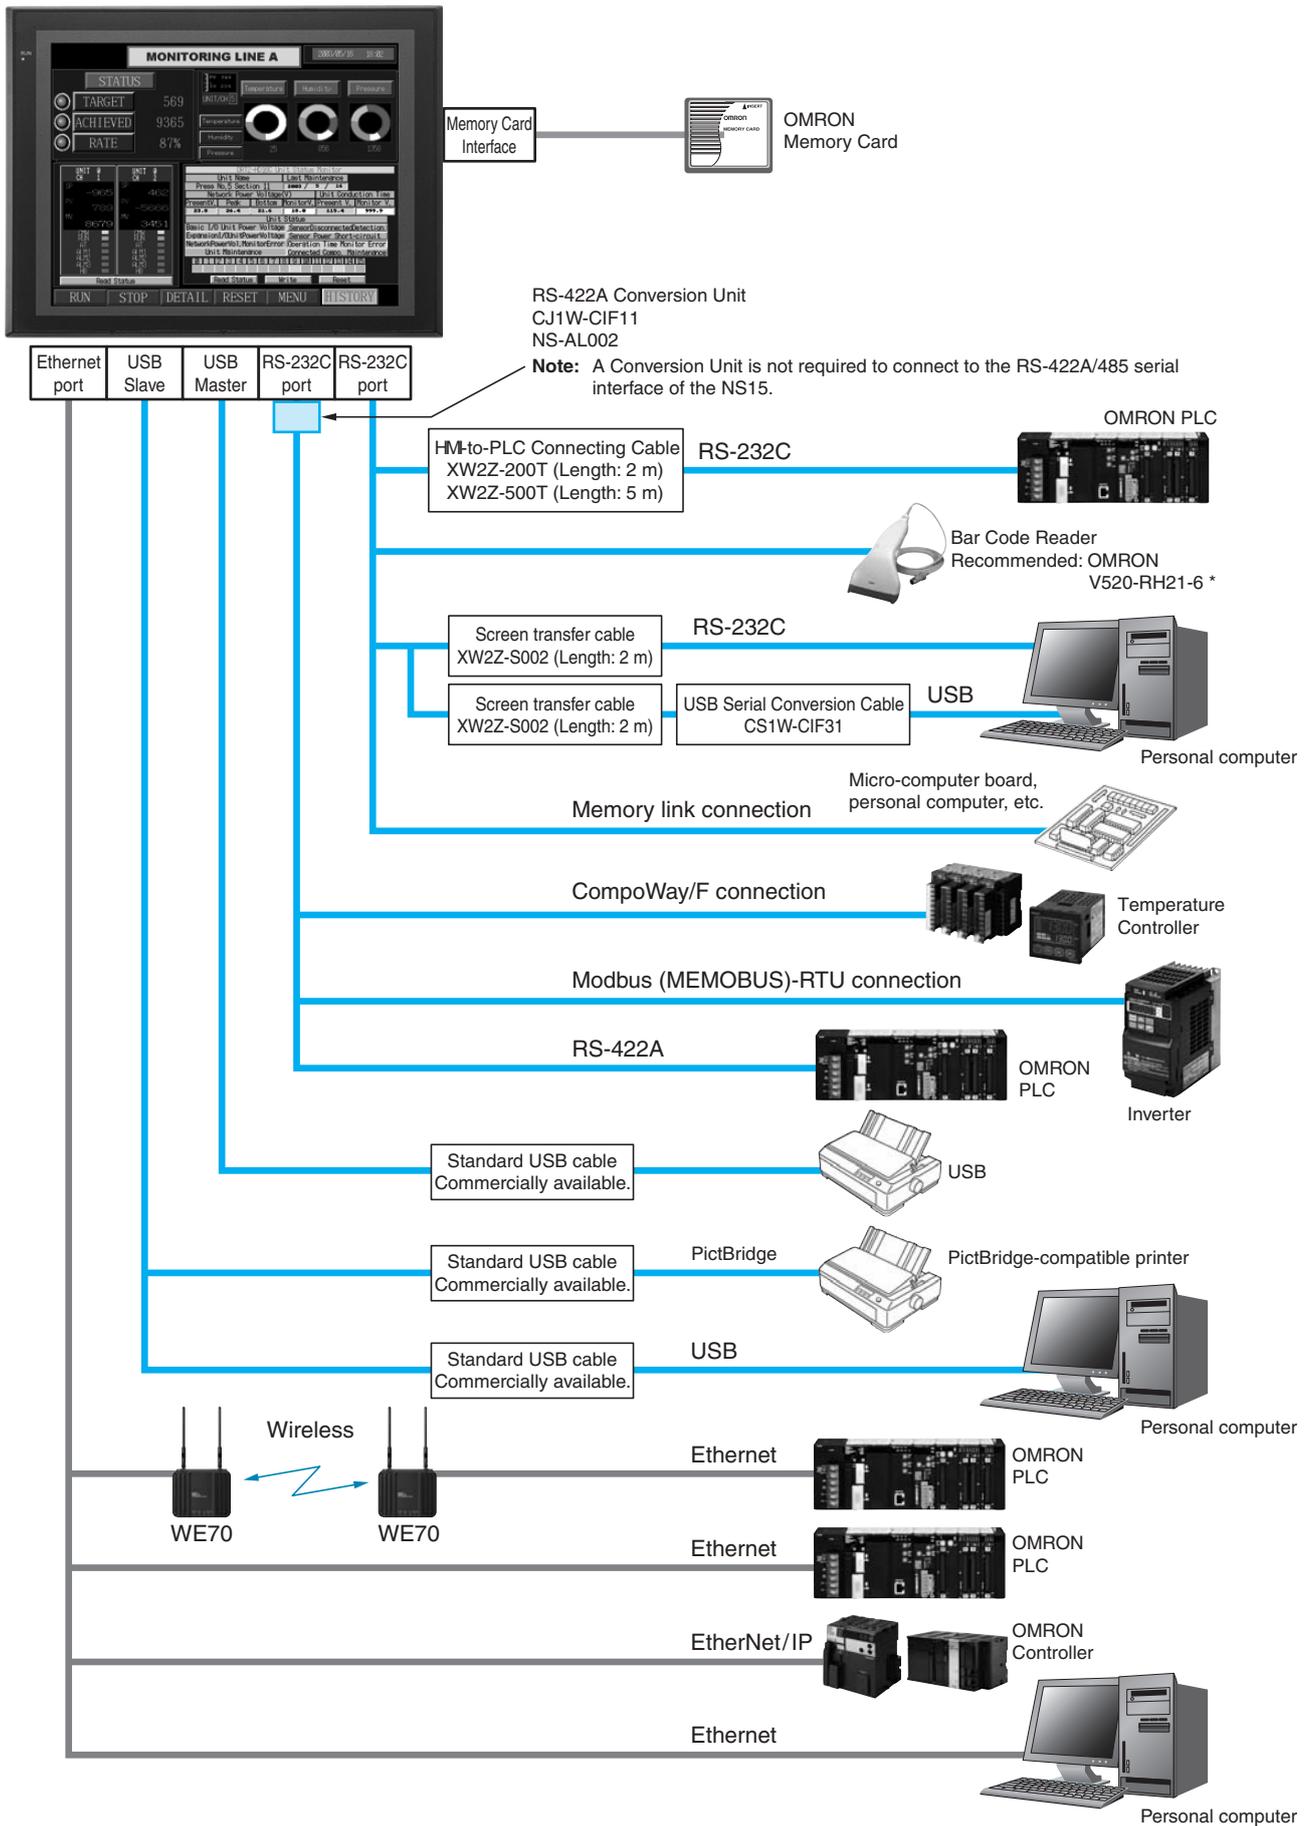

The NS-series HMIs can connect to a variety of devices in the network, through as many as 3 network levels.

For example, if SAP (Smart Active Parts) are being used, an NS-series HMI connected by Ethernet can be used to monitor the information in a PLC connected through Controller Link as well as the information in the DeviceNet Slaves connected to that PLC.

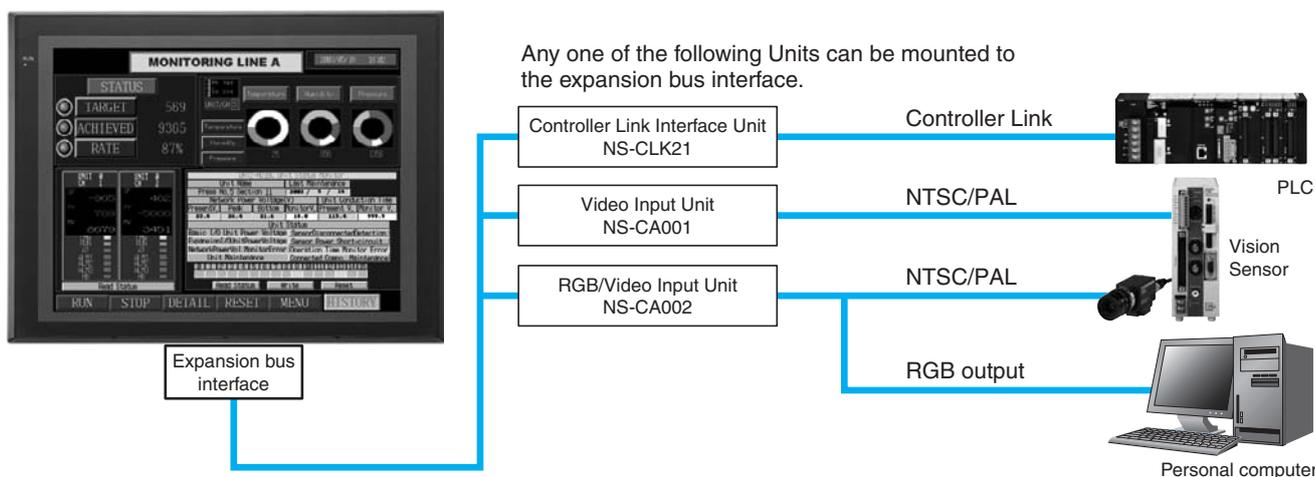

System Configuration

NS5/NS8/NS10/NS12/NS15

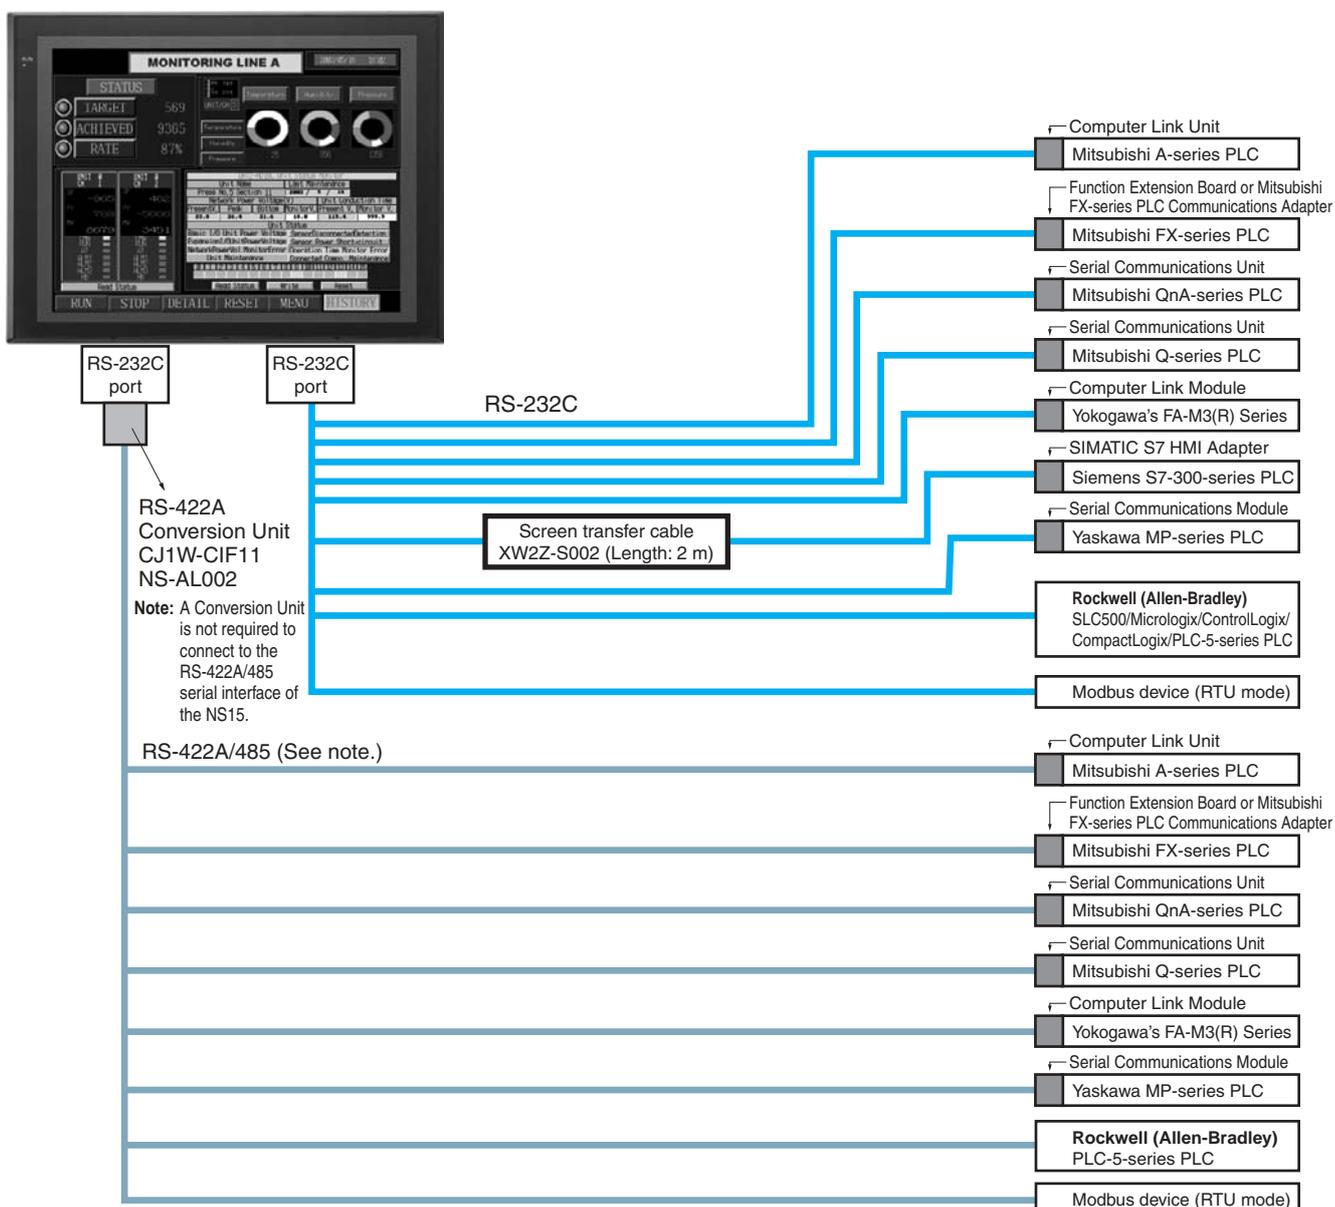

* Bar Code Reader (V520-RH21-6) was discontinued at the end of August 2016.

Expansion Bus Interface

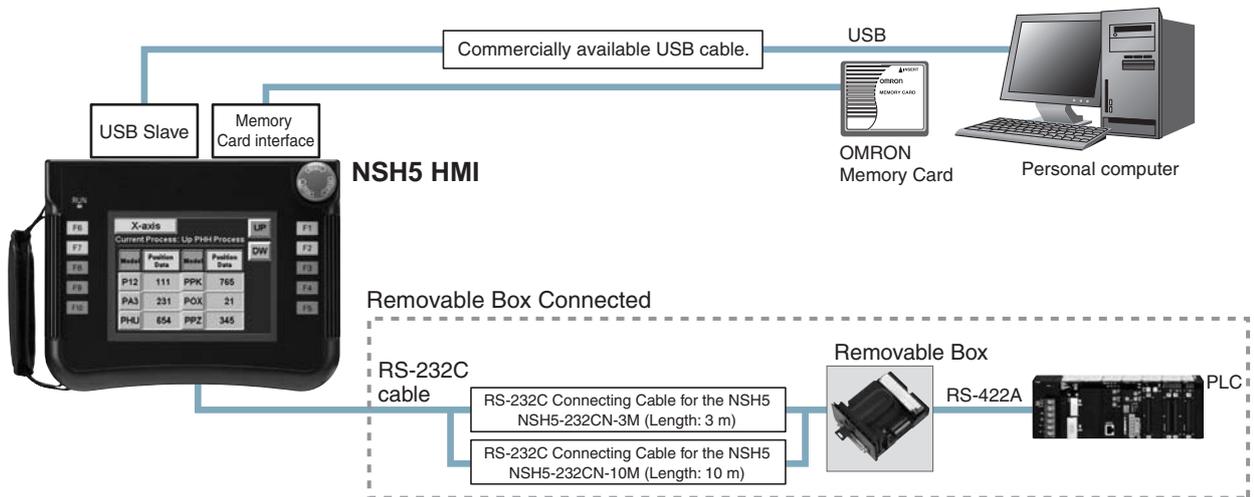

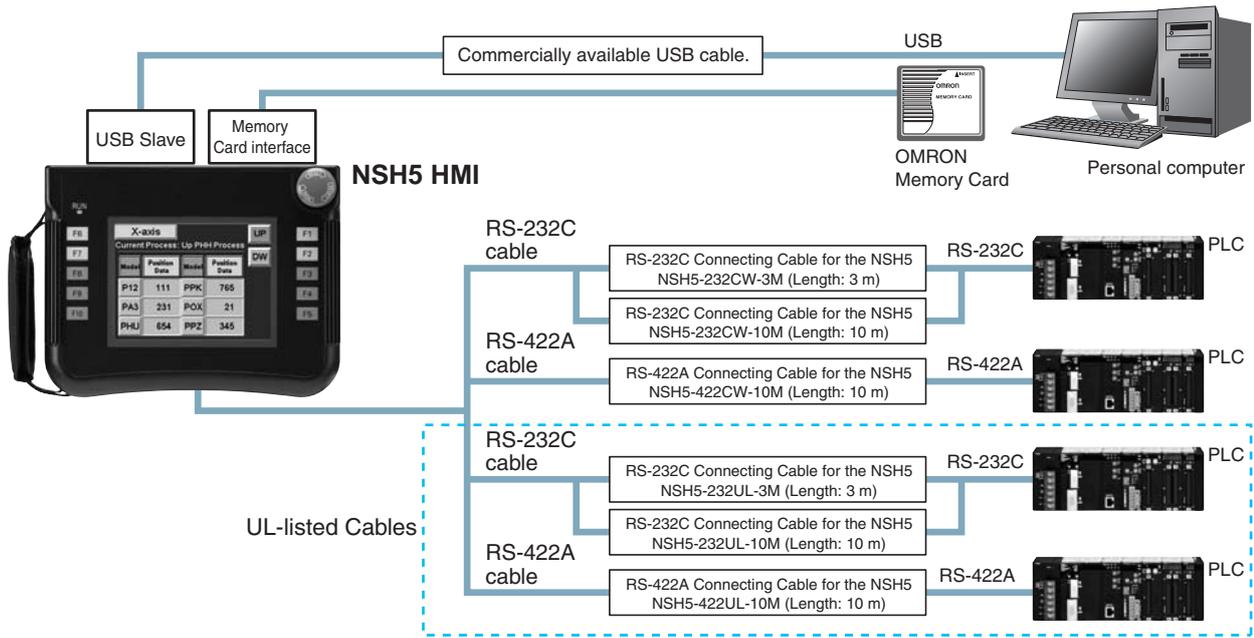

Note: Video Input Units and RGB Video Input Units cannot be used with some models.

Multi-vendor

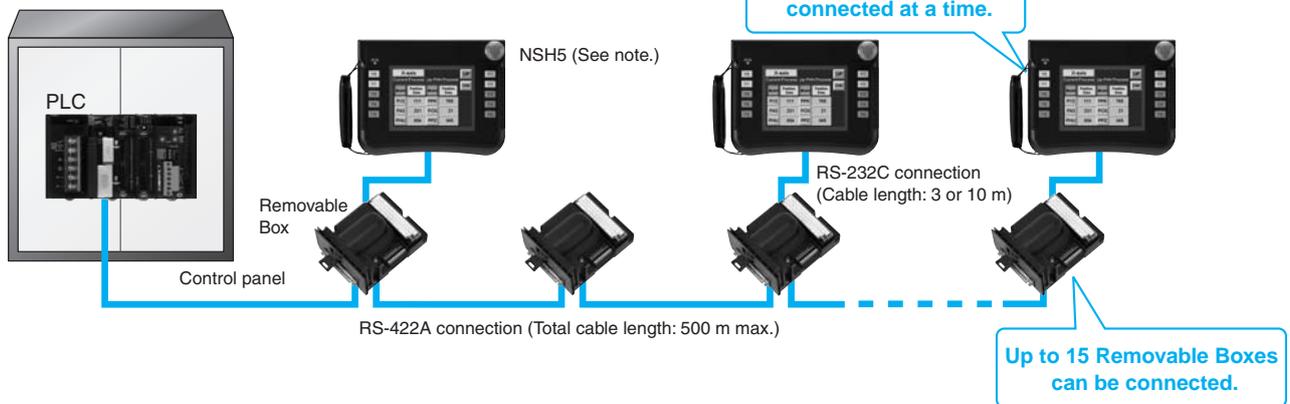

Note: Whether an RS-422A or RS-485 connection is supported depends on the device that you are connecting to. For details, refer to the Connectable Devices page or NS-Series Programmable Terminals HOST CONNECTION MANUAL Multivendor Connection (Cat.V092).

*1. Use a standard USB Type A male to Type B type male Cable to connect the NS series HMI to a personal computer (CX-Designer). We recommend that you use a USB cable with a ferrite core attached to ensure stable communications. (Examples: FH-VUAB from OMRON and U2C-BF series (US2-BF□□BK) from ELECOM as of February 2016)

Use a standard USB cable to connect the NS series HMI to a PictBridge-compatible printer. USB cable type depends on the printer.

*2. To connect the NS series HMI to NJ series Controller, using a commercially available 10/100-BASE-TX twisted-pair cable. For detail, refer to the NS series SETUP MANUAL (Cat. No.V083).

*1. NS5-TQ series (high luminance TFT) luminance is better than that of NS5-SQ series by about 110 cd/m².

*2. Contact your nearest OMRON representative to replace the backlight.

*3. This is the estimated time before brightness is reduced by half at room temperature and humidity. It is not a guaranteed value.
The service life will be dramatically shortened if HMI is used at low temperatures. For example, using the HMI at temperatures of 0°C will reduce the service life to approximately 10,000 hours (reference value).

*4. Lot No. 15Z0 or later of NS5 models.

*5. This function does not indicate that the service life has been reached. It detects when the backlight is not lit due to a disconnection or other errors.

Backlight error detection indicates that all backlights (2) are OFF.

*1. Contact your nearest OMRON representative to replace the backlight.

*2. This is the estimated time before brightness is reduced by half at room temperature and humidity. It is not a guaranteed value. The service life will be dramatically shortened if HMI is used at low temperatures. For example, using the HMI at temperatures of 0 °C will reduce the service life to approximately 10,000 hours (reference value).

*3. Lot No. 28X1 or later of NS8 models, Lot No. 11Y1 or later of NS10 models, Lot No. 14Z1 or later of NS12 models, Lot No. 31114K or later of NS15 models.

*4. This function does not indicate that the service life has been reached. It detects when the backlight is not lit due to a disconnection or other errors. Backlight error detection indicates that all backlights (2) are OFF.

*5. An analog touch panel is used with the NS15. Do not press the touch panel in two or more places simultaneously.

If the touch panel is pressed in two or more places simultaneously, it may activate a switch between the points that are pressed.
