Notes:

This model comprises a total of 12 inputs. Input functionality can be adapted as follows.All 12 inputs may be used as digital inputs. They may be wired in a group via a single jumper as either npn or pnp.

In addition, according to jumper settings and appropriate wiring:

- Inputs 5 and 6 can function as either digital or analog inputs.
 - If the digital inputs function as npn, analog option is not available.
- Input 0 can function as a high-speed counter, as part of a shaft-encoder, or as normal digital inputs.
- Input 1 can function as either counter reset, normal digital input, or as part of a shaft-encoder.
- If input 0 is set as a high-speed counter (without reset), input 1 can function as a normal digital input.
- 3. pnp/npn maximum frequency is at 24VDC.

Analog Inputs

Number of inputs 2, according to wiring as described above in Note 2

Input type Multi-range inputs: 0-10V, 0-20mA, 4-20mA

 Input range
 0-20mA, 4-20mA
 0-10VDC

Conversion time One configured input is updated per scan. See Note 4

Precision 0.9%

Status indication Yes – if an analog input deviates above the permissible range,

its value will be 1024.

Note:

4. For example, if 2 inputs are configured as analog, it takes 2 scans to update all analog values.

Response time 10ms (typical)

Contact protection External precautions required (see Increasing Contact Life Span in the

product's Installation Guide)

Note:

5. Outputs 0, 1, 2 and 3 share a common signal. Outputs 4, 5, 6, and 7 share a common signal.
