

FLOPPY DRIVE INSTALLATION

Introduction

The Floppy Drive Installation kit, for use on PS Series workstations, includes an external floppy drive, a cable, and four screws.

Before You Start

To mount the Floppy Drive, you will need the following items:

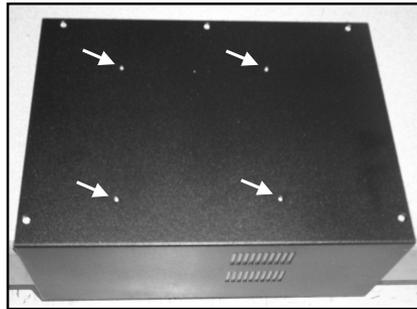

- Floppy Drive Kit FLP-1000 or FLP-2000
- Instructions
- Phillips screwdriver

Mounting the Floppy Drive

Mount Drive on Rear of Workstation

To mount the floppy drive on the rear of the workstation, follow these steps:

1. Turn the workstation off.
2. Find the four predrilled holes at the back of the workstation.

3. Attach the floppy drive to the rear of the workstation using the predrilled holes in the workstation and the four screws provided. Test access with a floppy disk.
4. Plug the floppy drive cable into the workstation port marked **floppy**.

Mount Drive Remotely

To mount the drive remotely, follow these steps:

1. Select a mounting location within reach of the cable provided.
2. Drill and deburr 4 holes in the selected mounting surface.
3. Attach the floppy drive to the mounting surface using the four screws provided.
4. Turn the workstation off.
5. Plug the floppy drive cable into the workstation port marked **floppy**.
