1.6 Signal cable connection

Shielded cables must be used with analog output modules. The ground connection for the shield is made on one of the terminal block shield connections provided for the two outputs.

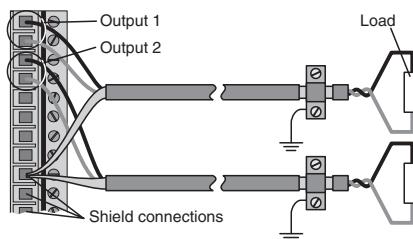

Figure 1: AO775 - Signal cable connection

Analog output module AO775

The four shield connections are of the equal value and each connected via RC elements with ground (↓ i.e. deviation plate and mounting rail).

R: 22 kΩ, C: 10 nF / 60 V
