

# CCpilot VA Starter kit

The **CCpilot VA Starter Kit** includes all hardware and software needed to try out CCpilot VA and rapidly get going with developing your application. It comes in an all-in-one box with a getting started manual. Just unbox it and get going!

## About CCpilot VA

CCpilot VA is a freely programmable, multifunctional 7" display computer for industrial vehicles. It comes with LinX Software Suite, an open software platform which offers a choice of powerful tools for application development. This, together with a WVGA resolution, high brightness display and hardware accelerated 2D, 3D and vector graphics, enables fast design of premium user interfaces. CCpilot VA comes in different versions – PCAP touch screen, soft keys and optically bonded glass are optional.

## Starter kit contents:

ITEM	DESCRIPTION
CCpilot VA	Two versions available, see ordering information below.
Software and documentation	LinX software platform runtime and CoDeSys runtime is pre-installed on the device. Hardware manuals, LinX development environment, getting started instructions are downloaded from our support site: <a href="http://support.maximatecc.com">http://support.maximatecc.com</a>
Training	Free on-line training webinar on LinX Software Suite, helping you to unleash the full potential of CCpilot VA in your application.
Stand/bracket	A practical stand for table top use. Includes mounting brackets and ball joint that can be re-used when doing in-equipment testing.
Wire harness	Wire harness with connectors and terminals for all interfaces – CAN, Ethernet, USB, Video, I/O, Power – making it easy to connect CCpilot VA to your system, test environment and peripherals.
