

Advantages and Application of Titanium Seamless Pipe:

First, the advantages: titanium alloy has low density, high specific strength, good corrosion resistance, low thermal conductivity, non-toxic, non-magnetic, solderable, good biocompatibility, strong decorative surface and so on. Application: widely used in heat exchange equipment, such as tube heat exchanger, coil heat exchanger, snake tube heat exchanger, condenser, evaporator and conveying pipe, etc. Many nuclear power industries use titanium tubes as standard tubes for their units. Titanium tube according to the use requirements and performance of the implementation of two national standards: GB / T3624-2010 GB/T3625-2007 ASTM 337 / 338
