Lean Manufacturing

State of the Art Facility

Located in the heart of Shenzhen, the innovation hub of China. Outfitted with breakthrough technologies, cutting-edge tools, and sophisticated equipment covering the entire spectrum of the manufacturing process including R&D, engineering, molding, and manufacturing. Transpring is a leading factory in the cannabis vaping industry, which spans 2600 square meters and is staffed by 1000 savvy professionals, ensuring excellent creativity and productivity.

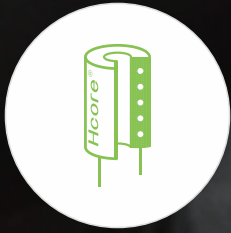

Local Service

We are committed to providing our customers with the most excellent products and services. In order to better meet the needs of the US market, we have set up branch offices in California and Michigan, offering a one-stop shop for vape solutions including filling, capping, and custom branding on our local inventory. All at advanced machines and competitive prices. In addition, our service team will track your order throughout the process. If you have questions about our products or services, they will be available to assist you at any time.

Hcore[®] Ceramic Heating Core

Transpring is the second company in this industry to independently develop ceramic heating cores. The Hcore[®] is the masterpiece of us. Compared with the flat and uneven surface ceramic with limited capacity to hold enough oil, Transpring Hcore[®] Ceramic Core adopts exclusive "Micro-vesicular" technology to offer more heating surface area, bioavailability, and higher vaporizing efficiency for a consistently rich taste.

Industry First Programmable Cartridge - CRMC[®]

The invention of CRMC[®] is another huge breakthrough. CRMC[®] is the very first programmable cartridge aiming to solve the most challenging problems in this industry once and for all: anti-counterfeit authentication enabled smart chip which makes seed-to-sale tracking not only possible but much more efficient and effective; automated concentrate specific temperature control (battery voltage output adjusted automatically to ensure the optimal vaping experience)

TSS (Tailored Smart Solution)

TSS is a customized solution based on the customer's requirements on Transpring cannabis vape devices. You can fully customize your products including power, temperature, control mode, alert mode, and other functions. Choose an optimal power and preheating mode according to your favorite oil, creating the purest and smoothest flavor. We will offer testing device TSS READER for you when sending samples so you no longer need to spend a lot of time and money on testing.

CannaMate™

CHILL

Taste the Cleanest Hit Ever

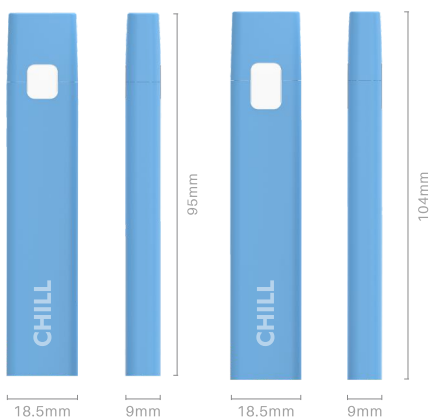

Cotton-free Ceramic Heating Technology

Thanks to its ingenious cotton-free design, there will be no clogging, smell of burnt cotton and the carcinogens released during cotton charring, ensuring a flawless vaporization experience for various oils.

Free of Central Post Design

CHILL's central post-free design prevents direct contact between the oil and the heating element, effectively minimizing the risk of exposure to harmful chemicals. Besides, its unique ceramic heating elements without central posts are ideally for vaporizing live resin and live rosin oil.

Performance & Properties

Volume: 0.5/1.0ml
Resistance: 1.3ohm
Tank Material: PCTG
Battery Capacity: 280mAh
Battery Housing: Aluminium Alloy
