# DESCRIPTION

## OF WATER FOUNTAIN DETAILS

PFM received a large water fountain project from east Europe in 2018. The fountain size is 12m (39.37ft) length by 7.6m (25.57ft) height. We produced fountain with Spain cream marfil marble and Hunan white marble as client's requirement. It spent 60 days to finish and load in 3 containers ship to the destination.

During the project, we provided many feasible plans based on our experiences and submitted better solutions more than our customer's consideration.

We controlled each steps including drawing correction, carving quality and exquisite details, measurement, package mark on each part and installation suggestion. To reliably provide our customer full solution with highest level of professionalism.
