CALACATTA MARBLE FLOORING REPAIRING PROCESS

www.pfmstone.com

DIAMOND TWIN TOWER

Dear Customers,

Today we would like to share true case which has happened to our customer in Phnom Penh, Cambodia. This nice building is 33 floors high, and it's the TOP grade office and condo building locally.

Our company has taken the contract of the most stone floors and wall cladding in this project, but for lobby area, the client bought directly from Italy, the calacatta. However because of wrong installation, they have caused a huge trouble, after two weeks, the yellow stains started to come from inside of bottom. Like the below pictures.

They have used black cement to install the white stone without any protection due to lack of experiences of applying marble.

They have tried many methods locally but failed.

To help our client to get out this situation to meet the grand opening date, we sent one technician from our team and started to save the marble floors.

How Is PFM Done ?

We did the below

Repair Process

Step 1: Grinding Off The Surface

Like the below video :

https://youtu.be/MN_kuHBZMFE

Step 2: Pour Enough The Chemical Liquid On The Surface

Step 3: Cover The Surface With Tissue Paper, And Seal It With Plastic Film, Keep It For 5-8 Hours

The result is very obvious, check the below video:

<https://youtu.be/uGIWxvswCUM>

Cover The Surface With Tissue Paper

Step 4: Clean With Water

Like the below video :

<https://youtu.be/h5QhryLZHbE>

Step 5: Polish The Floor Again

the polishing material we use is as below:

About

PFM company has been specialized in marble since year of 2006. We have accumulated rich experiences in marble projects. We have done projects throughout 36 countries.

We would like to remind all our customers kindly, to buy marble is easy, but apply it correctly, and to maintenance it correctly is also equally important!

We hope this file could do you any help in your coming projects, thank you for your time !

best regards,
PFM technician team
