1.System Structure

Electronic conference system is a complete integrated system composed of WiFi ESL, wireless Router, management system and wifi wireless communication protocol, which is suitable for various conference scenes.

Caution

- a. The ESL management is on Cloud;
- b. The local network interface should support DHCP;
- c. There are no restrictions for tag's access to the Internet;
- d. The wifi tag has enough power for running, Otherwise, charge it with type-c cable.

2.System Operation

2.1 Login System

Use the browser to access the website of the table card system, and use the assigned account number and password to log in to the system.

System website: http://103.139.3.135/mms/mms/tologin

2.2 Device Management

1.Registration tag

Step 1: Set wifi hotpot ("ESL" "123456789") and then open the mobile APP to set the parameters:

- Wifi account \ password in the environment
- Server address \ port
- Set the heartbeat time of the label

111(の)1121 米	32% 🔤 19:05	and the second	₩ \$ 10 158% 💌 14:23
\leftarrow Configure W	LAN hotspot	Setting	J
Hotspot name Use device name	ESL >	Tr CW1	
Encryption type	WPA2-Personal >	Tr	O
PASSWORD		Server IP	
123456789	۲	Port heartBea	tTime(s)
Password must contain at leas	st 8 characters.	80 20	
		Click to star	rt

Step 2: Use a pin-shaped object to trigger the button in the hole next to the USB on the back of the device (make the label enter the configuration mode), Press and hold the back button (for 2-3 seconds) until the screen flashes. After flashing, the app will be automatically connected to obtain the setting data. The success is shown in the figure below.

After the parameters are obtained successfully, the label will restart automatically, and access the server with the new configuration parameters. If the access is successful, the default image will be downloaded from the server.

At this time, the tag will automatically connect to the hotspot named ESL, and once the connection is successful, new parameter information will be written

Step 3: Enter the operation interface to modify the content. Each time the heartbeat time is reached, the label will go to the server, if there is new content, download it to the label to update the screen, if not, continue to sleep

2.add tag to ESL system

Enter the operation interface and click My ESL, you will see the ADD button on the right side.
