1. Abstract

1.1 Architecture

System B/S architecture, divided into: Database, Cache processing, front-end web application;

Database refers to a data storage container for storing system and user information (System utilizes MySQL);

Cache processing is used to compare data changes. (System utilizes Redis) ;

The front-end web application is a client-side application based on web browsers, with a default port of 4000.

1.2 System Architecture

The management system deployed on the server is used to provide system administrators and business personnel with information about the system's operational status, daily maintenance, and data queries.

The system is divided into six major module main menus: Home, Store Management, Data Management, Data Query, Template Management, System Management.

[Store Management]: Store List, Base Station Management, Electronic Shelf Label Management, Digital Signage Management, Area Management, Advertising Screen Management, Video Service Management;

[Data Management]: Product Management, Material Management, Shelf Management;

[Data Query]: Electronic Shelf Label Communication Log, Digital Signage Communication Log, Data Synchronization Log, System Log Query;

[Template Management]

[System Management]: User Management, Permission Settings, Organization

Structure, Parameter Settings, Admin Tools, System Configuration, System Management, Application Management.

2. System Login

2.1 Login Steps

♣ Open a web browser (Google is recommended), enter the eRetail3.1 system address in the input bar. The address consists of the server's IP address and port.

Enter the account and password (default admin account: admin, password: Pass99).

Recommended to add the eRetail3.1 system address to your browser bookmarks or create a shortcut on your desktop for quick access.

← → C ① 127.0	0.0.1:5000/#/login?redirect=%2FtemplateManger%2Ftemplate	• Q & ☆ 🛛 🕖 :
The eRet cross-ser server IP	tail3.1 local server uses 127.0.0.1, and the rver login can only use the eRetail3.1 local , and the port must be open for access.

(5) User: To modify the password of the currently logged-in account and to log out of

the eRetail3.1 system (redirecting to the login page).

3.1.1 System Statistics

View the number of all stores (including the number of products), the number of Access points (including the number of status and offline), the number of electronic shelf labels (including the number of low battery and lost labels) and the number of digital signage(including Offline Quantity) under the eRetail3.1 system . Click the corresponding color square to jump to the corresponding side menu;

3.1.2 Real-time Information

• **P1** Display the number of stores under the eRetail3.1 system, display the store number(not the customer store number), store name.

• **P2** The area displays the number of AP in the corresponding store, the total number on the left, and the offline number or the number in work on the right (this part is the same in the latter two areas).

• **P3** The area displays the number of ESL that the corresponding store is communicating with.

• P4 The area displays the corresponding store [Digital signage - LCD ESL] quantity

and offli	ne and working	g status		Q

Store Number: of in cannot be rep Customer Store not required, and data and cannot Store Name: The department stor Store address: C	eRetail3.1 system store number, 4 digits, the value filled beated. Number: The customer's store number, the length is the filled value is usually determined by the docking t be repeated. e name of the customer's store, such as a New Zealand re supermarket. Customer store address, optional.

Mainly check base station information.

Store Number	Access point	Access point name	IP	MAC	Status	Offline count	Firmware	Last online	Operate
0001	01	(Ô_	192.168.8.106	02:81:CC:27:DA:B3	Offline	17	1.0.115	2023-08-16	1
0001	02	۵	192.168.8.126	02:81:B1:DA:39:98	Offline	7	1.0.115	2023-08-16	1

Store Number: eRetail3.1 system store number (the same meaning will not be explained in the follow-up menu).

Access point: Base station ID, consisting of two digits, is determined by configuring the input information parameters of the base station, and cannot be repeated!

> Access point name: Customize the name of the base station, which can be

modified at any time.

➢ IP: The input information parameters of the configuration base station are determined. The base station has a fixed IP, and the IP cannot be repeated. If it is mapped to the external network, this IP is not the IP used by the actual base station.

> MAC: Base station MAC, each base station has a unique MAC value.

Status: Offline, online, at work. Usually offline means that the base station cannot access the background of the eRetail3.1 system, and working means that the base station is processing the sending task.

Offline count: The number of times the base station failed to access the eRetail3.1 system background within the period (heartbeat).

> Last online time, Last offline time, Last working time, Last heartbeat time

Last heartbeat time: The base station is offline, the time of the last heartbeat on eRetail3.1.

Please select a store	Status /	Q Search
KRIS(0001)	Online	
± Export	At Work	
	Offline	

(1) Top left search bar, three search criteria and a search button.

(2) Operation button

(3) $\stackrel{\text{$\pm$ Export$}}{=}$ Export the Excel table of the base station display information;

(4) Online base stations cannot be deleted, but offline base stations can be deleted;

3.2.3 Electronic Shelf Label Management

Functional operations such as ESL status query, bound Goods status, ESL binding,

unbinding, combined binding, refresh, import, export, etc.

The field column (top) is selected for the current page, and the label information column is selected for the label. After selecting, you can perform operations on the top button menu; (the same meaning in the subsequent menus will not be explained)

ESL ID: The value of the tag barcode, each tag has a unique value, which can be called the tag ID, device ID;

ESL type: The device type can be distinguished by the tag ID, and the first two digits of the tag ID correspond to the tag type;

UPC: Commodities that are bound and displayed by this tag, empty means unbound or unbound. UPC is the Goods data field corresponding to the customer's GoodsCode selected in the template parameter configuration during data docking. Click here to view the detailed information of the Goods;

Status:

Init: Unused tags, imported into eRetail3.1 system for the first time.

Idle: Non-working tag.

Low power: The voltage of frozen tags is lower than 2.2V, and the voltage of regular tags is lower than 2.5V.

At work: This tag is communicating (refreshing, binding, unbinding, flashing lights, etc.).

Fault: The temperature is 0, but the sending is successful (communication is successful).

Lost: If the number of sending times is less than 128 and more than 64 times are marked as lost, the process is in failure.

Blacklist: Sending more than 128 times eventually failed.

Others: Undefined.

Electricity:

	Regula	Frozen tag		
Power≥29	100%	24≤Power < 26 20%	Power≥27 100%	
28≤Power < 30	90%	23≤ <mark>Power</mark> < <mark>25 10%</mark>	26≤Power < 30 80%	
27≤Power < 29	80%	Power < 23 0%	25≤Power < 29 60%	
26≤Power < 28	60%	SIVIANT	24≤Power < 28 40%	
25≤Power < 27	30%		23≤Power < 27 10%	

Signal strength: Communication quality between the base station and the price tag (usually determined by distance and obstacles), the higher the value, the better the communication;

 Temperature: The ambient temperature recorded in the last communication of the tag;

Communication count: The number of successful communications before the \, and the total number of communications after the \;

Communication base station: The AP ID used for the last successful connection between the AP and the tag;

Last sent time \geq

(1) One-key binding: When multiple LCDs display the same Goods information, you need to select these devices first. In the search bar, one of the search criteria device size or device model must be selected to use this function.

(2) Action bar button

The operation method here is the same as that of LCD ESL, where the two sides are divided into A side and B side, and both sides need to be bound and submitted separately.

Modify the device name, customize the device name.

Preview the current display screen of the device.

Remote control: IT operation menu, please do not use this content function at will

3.2.7 Video Service Management

View service IP and port, online and offline status, software version, etc. LCD ESL and

LCD are only available when this service is online.

An ESL LCD task generates two records, displaying the content generation task and the communication task. After the video is generated, the task communication is performed. If the display content is not successfully generated (the waiting time for generation is related to the distribution of video tasks and the number of video tasks in the TFT configuration).

1.Batch communication failed, please check the settings of related videos.

2.If a single communication fails, please check the material, and the ESL LCD status is communicating.

(1) Task Type:

31

3.5 Template Management

3.5.1 Template Management

The product judges the template type through the template configuration-template expression, calls the corresponding template for display, and makes the corresponding template according to the required label model and the number of template types. Templates can be created and edited online, or templates made by eDesigner3.1 template tools can be imported through the import function. Templates are divided into global and store. The store template can only be used in this store, and the global template can be used in all stores.

(1) Description of the template name: REG corresponds to the general sales model of the product, SAL corresponds to the promotional sales model of the product, and MER corresponds to the member sales model of the product. The names of these three categories can be customized, and this name is defaulted. The meaning of the template code fixed by the system, U is unbinding, and OOS is the APP inventory mark template. **Commodity x 1** is usually the template name of LCD ESL or LCD, and **Commodity x 2** means that the price tag displays two commodity information at the same time. Only U and OOS mentioned above cannot customize the name. The name of the label template of the same model cannot be the same, and the name of the label template of different models can be the same.

(2) Template name naming specifications: model + template type or template display product quantity, such as 4.2-inch REG, 2.13-inch frozen REG, 10.1-inch **product** × **2**.

(3) +Add: there are many contents, and the user manual is made separately;

3.5.2 Holiday Management

Set the date to automatically switch special themes (festivals, events) templates for LCD ESL. First of all, make festival and activity templates in template Management.

(1) The meanings corresponding to the name of each authority role.

Character name	Meaning
admin	Administrator authority, the highest authority, all content can be set and changed
manager	Customer business manager login account role
pda	The relevant personnel who use the APP at the store end to log in to the account role
advertiser	Advertiser users, only the homepage displays content
OPEN_API	Interface permissions, used for users used in API docking, mainly used for data transmission, etc.
ESLUser	Label permissions
LCDUser	ESL LCD permission
ADVUser	ADV permission
ESL_ADVUser	Label and ADV permission

	() (
ESL_LCDUser	Label and LCD permission	К
LCD_ADVUser	LCD and ADV permission	
ESL_LCD_ADVUser	LCD、 Label and ADV permission	

3.6.3 Organization Structure

The default Sertag organization, all sub-organizations are managed under this organization, and organizations of the same level as Sertag cannot be added, and sub-organizations can be added through +.

Organization name	Organization ID	Creation Time	Operation
SERTAG	1	©2023-08-04 11:16:51	+ 2

(1) Effect: It is used to log in to the APP account (global account) and the establishment of stores in the background to realize the management of stores under different organizations.

(2) For example: the newly-built stores 0013 and 0014 belong to the Australian region, the 0015 store selects the UK region, the new global account role selects manager, the organization selects the Australian region, and the login account eRetail3.1 system background only displays the information of 0013 and 0014 stores. Stores that do not display 0015 display.

system Configuration			
Scale code start position	Scale code start position	~

(1) Please Select a Store: You can also set a single store when setting the global setting. The TFT configuration part is only used for the global. After selecting a store, click + to add store configuration, and select the corresponding store to set parameters;

(2) System Configuration

Scale code start position and Scale code length: Parameters filled in for APP interception and binding.

Limit Price Settings: It is restricted that the price changed by the store app cannot be greater than the price specified by the headquarters. Invalid for database and customized synchronization methods.

- (3) TFT configuration: Only set globally.
- (4) Set the TFT timer switch time, control all LCD ESL under this store

		$\Lambda \cap$
Device heartbeat	90	API heartbeat: Report the screen data to the cloud background at a fixed time of 15 seconds. If the report cannot be made regularly, the device will display offline.
API heartbeat	15	Device heartbeat: The default is 90 seconds, set the size according to the use scene (number of screens
imited task quantity.	20	in the area), the maximum is 80 screens with one WIFI, the number of screens in the use scene area is far far less than 80 screens. 90 seconds can be shortened to 30 seconds, etc. The number of screens is far
Video task delivery	60	greater than 80 screens, it is recommended to add more WIFI.
Video task quantity	10	Limited task quantity: Process 20 screens at the same time
File cleaning cycle	3	
Video task delive Video task quan the task process File cleaning cyc	ery:Video task pro tity: The number o ing cycle :le: Clean every 3 o	cessing cycle Process 10-screen video tasks of tasks processed in every 60 seconds

(5) System feedback configuration: To feedback parameters such as ESL refresh and base station status to the customer system, the customer needs to provide the URL address of the feedback. If it is a customer-customized project, the customer needs to inform the custom name and feedback parameters.

System feedback configura	ition

3.6.5 Admin Tools

(1) Set information modification, set stores to synchronize independently.

(2) The instance name is the actual column name parameter filled in the system configuration.

Instance Name	ETAG
Backup Tables	 D2M Configure Template Shop Tag GoodsBind ResBind TFTInfo Settings Area
Enable automatic backup	

Select the backup data table, D2M is the commodity data connection information table, Shop is the store information table, and Tag is the ESL information table.

Enable automatic backup: Set the backup period-Scheduled backup.

(3) If the synchronization service is abnormal or not synchronized, it will show that the synchronization service is not running. When the data cannot be updated normally, check whether it is running normally here.

(4) Clear the eRetail3.1 system-related data in Redis. If the base station is not online, the data cannot be imported or exported. Try to clear the cache service.

42

(5) Refresh all labels in the specified store, or refresh the labels under the store

according to the conditions;

TFT screen refresh	ESL refresh
Store	Store
Select area \checkmark	Template name
Template name	୍ଦ Submit
୍ଦ Submit	

(6) LCD ESL hardware program upgrade, click Add, enter the MAC address of the device

to upgrade, the label MAC address is the device ID.

Store number is required Select area Version Tag MAC address Add Upload OTA file		OTA Upgrade		
Select area	_	Store number is required		
Version Tag MAC address Delete Add Upload OTA file		Select area	~	ADE
Tag MAC address Delete Add Upload OTA file		Version		
Add Upload OTA file		Tag MAC address	Delete	
Upload OTA file		Add		
		Upload OTA file		

3.6.6 System Configuration

(1) Parameters set in the system configuration. Enabling the shared directory means that the video is sent through the SendServer service, and after it is enabled, it is downloaded through the TFTAPI shared folder;

* Instance name	ETAG	
Customer code	ETAG	
Client name	Kris	
System default language	English	
* Please enter the current site access address	http://192.168.4.118:5000/	
Enable Share Directory		
	≉ Save	

(2) Message Stack: eRetail3.1 system log files are sent to relevant maintenance
