1. Summary

eRetail3.1 supports docking methods: Data Sync/API, hardware equipment, API is Restful Web API, which provides an interface for customer systems to actively push product data; Data Sync is a background service that actively captures data from customer systems (Database, Web API, Excel).

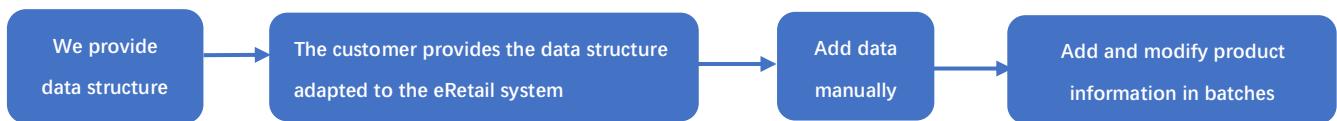

2. Product Data Docking Method

Data docking: active docking, passive docking, and no docking.

- Active docking: eRetail3.1 actively requests data, requiring the client to provide data access rights, connection information, data structure, product sales logic, and active docking: database docking, files, FTP files, customization (API interface).

- Passive docking: To receive data sent by customers, we provide corresponding API interface documents and data structures.

- No docking: Product data is maintained in eRetail3.1, and product data is added and modified through background tables.

3. Active Docking

Parameter configuration: Log in eRetail3.1 - System Management - Admin Tools - Fill in the docking parameters in the System Configuration.

The screenshot shows the Admin Tools section of the eRetail3.1 system. On the left, a sidebar menu includes Home, Store Management, Data Management, Data Query, Template Management, System Management (selected), User Management, Permission Settings, Organization Structure, Parameter Settings, Admin Tools (selected), System Configuration, System Font Management, and Application Management. The main area has three main sections: 'Enter configuration system' (highlighted with a red box), 'TFT screen refresh' (with fields for Store, Select area, and Template name, and a 'Submit' button), and 'ESL refresh' (with fields for Store, Template name, and a 'Submit' button). Below these is a 'Data Backup' section with tabs for Instance Name (selected) and ETAG. It lists 'Backup Tables' (D2M, SysUser, GoodsBind, Settings) and 'Enable automatic backup' (a toggle switch). At the bottom are 'Save' and 'Backup' buttons. To the right are sections for 'Sync service is running' (Reload All), 'Caching service is running' (Reload All), 'OTA Upgrade' (Store number required, Select area, Version, Tag MAC address, and an 'Add' button), and 'Upload OTA file' (Submit button).

3.1 Store Configuration

- **Store Number:** The global configuration is the configuration information of all eRetail3.1 stores; the single store configuration is the configuration information of the specified store.
- **Data Sync:** Active docking must be turned on.
- **Sync Interval:** Synchronization period, unit second.
- **Template type:** ESL template name, needed when making templates.

3.2 Data Sync Configuration

Shop Configuration > Data Sync Configuration > Dynamic Model Configuration > Model Parameter Configuration > Template Configuration

Data Sync Configuration (Global)

Data Source Database File FTP File Customize

Database Type MySQL

Connection String `data source=XXX;database=XXX;user id=XX;password=XX;pooling=false;charset=utf8;Connect Time` Help me fill in the template!

Query String

Query Type SQL Query Stored Procedure

Parameters `shop=000=false`

Database: The customer uses a database containing product data; provides database connection parameters and product data structure information.

- Database type: SQL Server, My SQL, Sybase, Oracle, and Sqlite.
- Connection string: Click to help me fill in the template and change parameters.

| Database | SQL Server |
|----------|---------------|
| Params | Meaning |
| server | DB IP address |
| uid | DB username |
| pwd | DB password |
| database | DB instance |

| Database | Sybase |
|-----------------|---------------|
| Params | Meaning |
| Data Source | DB IP address |
| Initial Catalog | DB instance |
| Userid | DB username |
| Password | DB password |

| Database | Sqlite |
|----------|---------|
| Params | Meaning |

| Database | My SQL |
|-----------------|-------------------------|
| Params | Meaning |
| data source | DB IP address |
| database | DB instance |
| userid | DB username |
| password | DB password |
| pooling | Connection limitations |
| charset | Encoding type |
| Connect Timeout | Maximum expiration time |

| Database | Oracle |
|--------------------|-------------------------|
| Params | Meaning |
| HOST | DB IP address |
| PORT | DB port |
| SERVICE_NAME | DB instance |
| UserId | DB username |
| Password | DB password |
| Min Pool Size | Connection limitations |
| Connection Timeout | Maximum expiration time |

- Try: Test the database connection information filled in. Click the upper right corner of Try to prompt success.
 - Query String: Fill in the corresponding String according to the selected Query Type.
 - Parameters: When Query Type selects a Stored Procedure, fill in the stored procedure parameters.
- (1) SQL Server 2000 requires tools to synchronize data from the 2000 version to the 2012 version in real time (the tools are provided by us), and then use the 2012 version data to connect.

Shop Configuration → Data Sync Configuration → Dynamic Model Configuration → Model Parameter Configuration → Template Configuration

The screenshot shows the 'Data Sync Configuration' page under 'Template Configuration'. The 'Query String' field contains 'pr_ESL_getdata' and the 'Parameters' field contains 'p_tsoutstr=%', 'p_mode=100', 'p_branch=001', and 'p_value=%'. Both fields are highlighted with red boxes.

| Data Sync Configuration | | (Global) | | |
|-------------------------------------|---|---|--------------------------------|---------------------------------|
| Data Source | <input checked="" type="radio"/> Database | <input type="radio"/> File | <input type="radio"/> FTP File | <input type="radio"/> Customize |
| Database Type | SQL Server | | | |
| Connection String | server=127.0.0.1,5000;uid=admin;pwd=Pass99;database=Kris; | | | |
| | <small>Help me fill in the template!</small> <input type="button" value="Try"/> | | | |
| Query String | <input type="text" value="pr_ESL_getdata"/> | | | |
| Query Type | <input type="radio"/> SQL Query | <input checked="" type="radio"/> Stored Procedure | | |
| Parameters | <input type="text" value="p_tsoutstr=%"/> <input type="text" value="p_mode=100"/> <input type="text" value="p_branch=001"/> <input type="text" value="p_value=%"/> | | | |
| <input type="button" value="Next"/> | | | | |

Configure based on stored procedure data in the customer database.

File: The product data file in the specified file path, and eRetail3.1 reads the files in the path in real time.

Data Sync Configuration (Global)

Data Source Database File FTP File Customize

File Path D:\3.0\abutment

File Type xlsx

First Row as Header Yes No

File Encoding UTF-8

Delete Source File Yes No

Backup Directory D:\3.0\backups

Next

File: The product data file in the specified file path, and eRetail3.1 reads the files in the path in real time.

- **File Path:** Sync file path.
- **File Type:** Supports xlsx, xls, csv, txt file formats.
- **First Row as Header:** The first line is the field name, select Yes; or the product data, select No.
- **File Encoding:** The default format is UTF-8.
- **Delete Source Files.**
- **Backup Directory:** The synchronized files will be deleted, and the deleted files will be stored in this path.
- **File fields cannot contain a field named template.**

- FTP Address: IP of FTP software server.
- FTP User: FTP software server login name.
- FTP password: FTP software server login password.
- FTP Path:FTP software server storage data file path.
- Other settings: same as file.
- Differences between files and FTP files:

File Synchronization

FTP File Synchronization

Customize: The customer provides the product data API interface, and we obtain the data through the interface. Fill in the connection parameters with the customized instance name and customized parameters.

Shop Configuration > [Data Sync Configuration](#) > Dynamic Model Configuration > Model Parameter Configuration > Template Configuration

The screenshot shows the "Data Sync Configuration" page under "Dynamic Model Configuration". It has a header "(Global)". Below it, there's a "Data Source" section with radio buttons for "Database", "File", "FTP File", and "Customize" (which is selected). There are also fields for "Customization Instance Name" (containing "Customization Instance Name") and "Customization Parameters" (containing "parmater1,parmater2"). At the bottom is a blue "Next" button.

Customer provides information:

- Various request addresses related to ESL: Store Number, Product Data, Key, etc.
- Various request parameters related to ESL: Store Number, Product Data, Key, etc.
- Various response parameters related to ESL: Store Number, Product Data, Key, etc.
- ESL require fields and field meanings.
- Product sales method judgment logic.

- Product field data conversion logic.

3.3 Dynamic Model Configuration

Customized docking requires no settings.

The screenshot shows a configuration table for product fields. The columns include:

- eRetail fields**: A column of field names: id, store_id, item_id, desc_en, desc_zh, price_sal, price_reg, shelf_id, origin.
- Type**: Data types: Int32, string, string, String, String, decimal, Decimal, String, String.
- String, date, decimal, int**: A column indicating the type of data conversion logic applied to each field.
- Read-only**: Checkboxes for setting fields as read-only.
- More Settings**: Buttons for viewing additional configuration options.
- Is Hidden**: A column with a green toggle switch for hiding fields. A red arrow points to this column from the text "Custom fields".
- Show / Hide**: Buttons for switching field visibility.
- Default Value**: Input fields for setting default values.
- Original Time Format**: Input fields for setting original time formats.
- Original Encoding**: Input fields for setting original encoding formats.
- Converted Encoding**: Input fields for setting converted encoding formats.

A large red arrow points from the "String, date, decimal, int" column to the text "Data is visible but not editable if is selected".

A red arrow also points from the "Is Hidden" column to the text "1. Two decimals reserved for price: #0.00,(12-12.00)".

A red arrow points from the "Original Time Format" input field to the text "2. Format price: (9,111.00). N,(98573.00-98,573.00)".

A red arrow points from the "Original Encoding" input field to the text "3. Format date: dd/MM/yyyy HH:mm:ss".

Custom fields

Data is visible but not editable if is selected

1. Two decimals reserved for price: #0.00,(12-12.00)
2. Format price: (9,111.00). N,(98573.00-98,573.00)
3. Format date: dd/MM/yyyy HH:mm:ss

- Is Hidden: Green means display, red means hide. After hiding, the product query on the APP can't display this field and field information.
- Default Value: Filling in the format data will replace the original data.
- Original Time Format: For example, time 02122023 can be filled in MMddyyyy
- Original Encoding\Converted Encoding: Some product data encoding formats can't be recognized by the eRetail3.1, and direct acquisition will result in garbled codes. Fill in the customer's product data encoding format with the original code,

and fill in the encoding format supported by the eRetail3.1 with the converted code.

Model Parameter Configuration (0001)

3.4 Model Parameter Configuration

- Store Number: Use Column, Use File Name or Use Folder Name.
- Store Number: You must be choose Use Column if you use to select Store Number.
- Goods Code: The value of this field must be unique under the same store.
- Goods Name: Select the connected product name field.
- UPC: The field used to unlock the product when ESL is bound to the product. Usually the default Goods code is UPC.
- Trim Characters:

| | | | |
|---|---|---|---|
| Trim Characters | Select the field to trim ▾ | <input type="button" value="Start Characte"/> <input type="button" value="End Characte"/> | Remove fixed characters at the beginning or end of the selected field |
| Beginning Char0 | Beginning Char 12 | Beginning Char 12, End Char 4 | |
| Custom data Goods UPC: 00789123 Goods UPC: 00789443 | Custom data Goods UPC: 123478954 Goods UPC: 123478664 | Custom data Goods UPC: 123478954 Goods UPC: 123478664 | |
| Converted data Goods UPC: 789123 Goods UPC: 789443 | Converted data Goods UPC: 3478954 Goods UPC: 3478664 | Converted data Goods UPC: 347895 Goods UPC: 347866 | |

Note: Goods Code is not supported for trim!

➤ Format Expressions: Transform customer data.

1. $4\#0.5=10:E:KG|10:E:kg|10:E:kG|10:E:公斤$
Sal price will be divided by two when Unit meets KG/kg/Kg/kG/公斤

2. $5\#0.5=10:E:KG|10:E:kg|10:E:kG|10:E:公斤$
Reg price will be divided by two when Unit meets KG/kg/Kg/kG/公斤

3. $10~500g=10:E:KG|10:E:kg|10:E:kG|10:E:公斤$
Unit will be fixed as "500g" when Unit meets KG/kg/Kg/kG/公斤

4. Some rounded fields use @ instead of #, to make sure the calculated result keep in Integer.

For example:

When the inventory number is greater than 500, multiply the number of storage by #Inventory Value@2, and the calculation result of @ is an integer.

3.5 Template Configuration

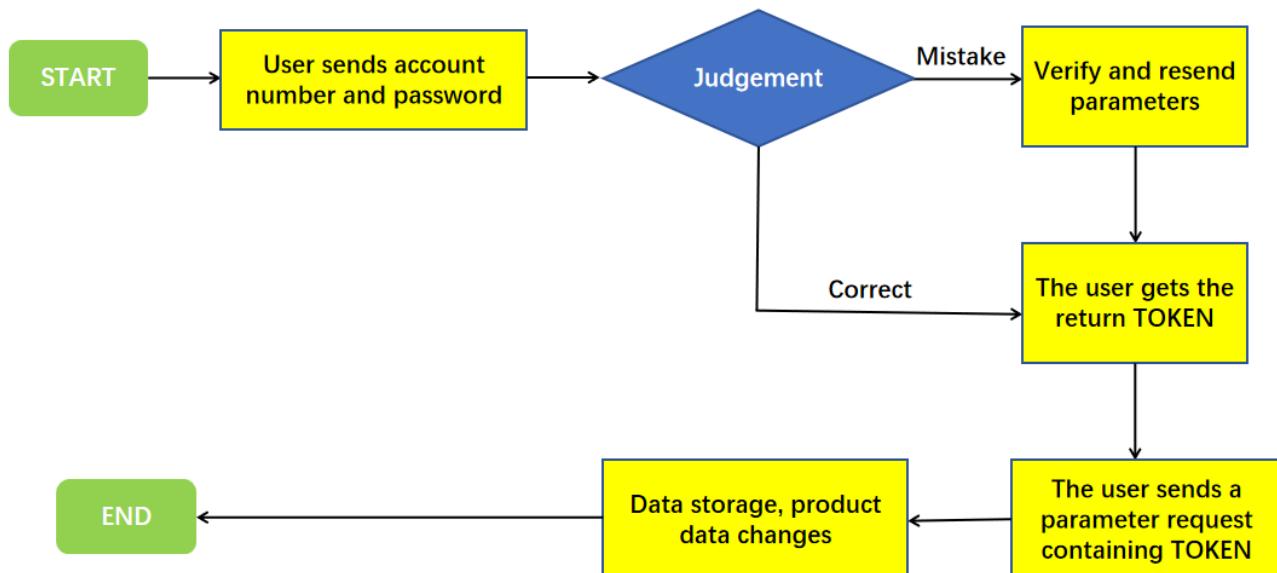

| Column Index | Default Value | Expression explanation: Template ID=condition expression |
|---|---------------|---|
| 0.Store Code 4.Sal Price 8.Start Date | REG | 1. Condition operators: &-and, -or; 2. Logical operators: E-equal to, NE-not equal to, I-contains, NI-does not contain, G-greater than, GE-greater than or equal to, L-less than, LE-less than or equal to; 3. Parentheses are used for logical nesting: () 4. Expression delimiter is a colon ":" 5. Special agreement: Current time 'GDT{1}', the number within the curly braces represents the number of days to add or subtract. When the value is eRetail.1, it indicates comparison with the specified field in the current data. Greater than, less than, greater than or equal to, less than or equal to can only be used for numeric and date comparisons. 6. Example: SAL=1:G:0&2:LE:GDT&3:GE:GDT{-1}, indicates that the template is SAL when field 1 is greater than 0, field 2 is less than or equal to the current time, and field 3 is greater than or equal to the current time minus one day. |
| 1.Goods Code 5.Reg Price 9.End Date | | |
| 2.Description 6.Shelf Code | | |
| 3.商品描述 7.Origin | | |

- Expression explanation: Template ID=condition expression.
- Default value: Usually empty and default REG type.

- Condition operators: &-and, | or;
- Logical operators: E-equal to, NE-not equal to, I-contains, NI-does not contain, G-greater than, GE-greater than or equal to, L-less than, LE-less than or equal to;
- Parentheses are used for logical nesting: ()
- Expression delimiter is a colon ':'
- Special agreement: Current time 'GDT{1}', the number within the curly braces represents the number of days to add or subtract. When the value is eRetail.1, it indicates comparison with the specified field in the current data. Greater than, less than, greater than or equal to, less than or equal to can only be used for numeric and date comparisons.
- Example: SAL=1:G:0&2:LE:GDT&3:GE:GDT{-1}, indicates that the template is SAL when field 1 is greater than 0, field 2 is less than or equal to the current time, and field 3 is greater than or equal to the current time minus one day.
- Note: The above list can be used as a reference.

4. Passive Docking

Data Sync option is turned off.

4.1 Calling Method

Handshake interface: This interface is used for authentication. All subsequent interface accesses depend on the data obtained by this interface.

- ◆ HTTP POST

URL: http:// 192.168.1.92:5000/api/login

Content-Type: application/json

- ◆ Request Parameters:

| Parameter Name | Type | Describe |
|----------------|--------|---------------------------|
| userName | String | Username (provided by us) |
| password | String | Password (provided by us) |

- ◆ Return Format:

| Parameter Name | Type | Describe |
|----------------|-----------|-------------------------------|
| code | Int | 0: success, other: error |
| message | String | success or error message |
| body | Json Node | message body |
| token | String | Token for subsequent sessions |

Notice: After obtaining the Token, this content needs to be added to the header of subsequent HTTP requests. Like: "Authorization: Bearer {token}"

- ◆ Example:

Request

```
{
  "userName": "port",
  "password": "Port99"
}
```

Response

```
{
  "code": 0,
  "message": "success",
  "body": {
    "token": "eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9..."
  }
}
```

```

    }
}

```

Product data interface: This interface is used to add and update multiple product data.

◆ HTTP POST

URL: <http://192.168.1.92:5000/api/goods/saveList>

Content-Type: application/json

◆ Request parameters:

| Parameter Name | Type | Describe |
|----------------|------------------|--|
| shopCode | String | Store number, create the corresponding store. |
| template | String | Template name, create the corresponding template. |
| items | Array String[26] | Product data attributes, fixed at 26 (expandable) |

◆ Return format:

| Parameter Name | Type | Describe |
|----------------|-----------|--------------------------|
| code | Int | 0: success, other: error |
| message | String | success or error message |
| body | Json Node | message body |

Note: After obtaining the Token, you need to add this content to the header of subsequent HTTP requests. like:"Authorization: Bearer {token}"

◆ Example:

Request

```

[
{
  "shopCode": "0001", //Customer store number
  "template": "REG", // ESL type: REG-General Sales, SAL-Promotion, NOR-Out of Stock....
  "items": [
    "A050", //Store number
    "123456", //Product code
    "Product 1", //Product name
    "1", //Product abbreviation
    "123456789012" //UPC1
  ]
}

```

```
"123456789013",// UPC2
"123456789014",// UPC3
"8.98",// REG price
"8.95",//SAL price
"8.96",//Member price
"8.96",//Original price
"Shanghai",//Origin

"Extension 3",
"Extension 4",
"Extension 5",
"Extension 6",
"Extension 7",
"Extended 8",
"Extension 9",
"Extension 10"
]
}
]
```

Response

```
{
```

```

    "code": 0,
    "message":"success",
    "body":"121f5151fdffffds21cdf"
}

```

Note: The field properties in this example are fixed. In fact, product data field content and templates can be set freely.

4.2 System Integration Interface

Integrate eRetail3.1 into the customer system, and the customer system operates, binds, and unbinds... eRetail3.1. ESL continues to work in eRetail3.1.

ESL data push refresh: Customers push product data and refresh to the specified ESL. The system background will not save user data.

- ◆ HTTP POST

URL: <http://192.168.1.92:5000/api/esl/tag/push>

Content-Type: application/json

- ◆ Request parameters:

| Parameter Name | Type | Describe |
|----------------|--------|--|
| shopCode | string | Store number |
| tagID | string | ESL ID |
| ap | string | Send from designated base station(Default empty) |
| item | Object | Data entity |
| GoodsCode | string | Product unique code |
| GoodsName | string | Product name |
| Template | string | Template name |
| Items | Array | Data details array (Fields are used to bind to template display) |

- ◆ Return format:

| Parameter Name | Type | Describe |
|----------------|--------|--------------------------|
| code | Int | 0: success, other: error |
| message | String | success or error message |
| body | String | Default is empty |

- ◆ Example:

Request

```
{  
    "shopCode": "0002",  
    "tagID": "4F000001320A",  
    "ap": "",  
    "item": {  
        "GoodsCode": "123456",  
        "GoodsName": "Obatley Castle Dry Red",  
        "Template": "SAL",  
        "Items": [  
            "0002", //Store number  
            "123456", //Product code:Unique product code  
            "Obatley Castle Dry Red", //product name  
            "Castle Dry Red", //Product abbreviation  
            "123456789012", //UPC1  
            "123456789013", // UPC2  
            "123456789014", // UPC3  
            "118.98", //REG price  
            "110.95", //Sale price  
            "118.96", //Member price  
            "118.96", //Original price  
            "Shanghai", //Origin  
            "300ml", //Specification  
            "qualified", //Grade  
            "bottle", //Unit  
            "2021/12/20", //Promotion start date  
            "2021/12/25", //Promotion end date
