IDEAS TO REALITY BUILDER

ABOUT US

Promising Flooring Material Ltd. is one of the most successful, and rapidly expanding construction organizations in the east Asian region. Established in 2008, we offer the industry's most comprehensive range of construction materials. We are a one of a kind, turn-key, interior and contracting solution provider.

Our aim is to continue to grow, by taking on projects that more than demonstrate what we are capable of. Surpassing expectations, and continuing to enhance the lives of our people.

Our success is built on fostering strong, long-term relationships with clients and suppliers. These relationships are based on trust, respect, and transparent ethical working practices. Our clients' faith in us inspires us to complete projects on time, and on budget.

To achieve our goals, we continue to innovate by embracing leading-edge technology, and constantly monitoring and enhancing the way we work.

Chief Executive Officer
Susan Chen

A handwritten signature in black ink, reading "陈婉珊" (Susan Chen), is positioned above a horizontal line. The signature is fluid and cursive, with the characters clearly legible.

PFM White Marble Quarry

PFM has set up a joint venture with Tajikistan company, developed a white marble quarry together in 2017. For the source and cost control of raw materials, we will have more advantage to supply the stable quantity and quality white marble to each project.

Stone Laminated Board Introduction

Marble material has always been favored by the construction industry because of its beautiful natural colors and veins. But as adornment building material, marble material still exists a few weakness, such as easy to be bent, poor intensity, expensive.

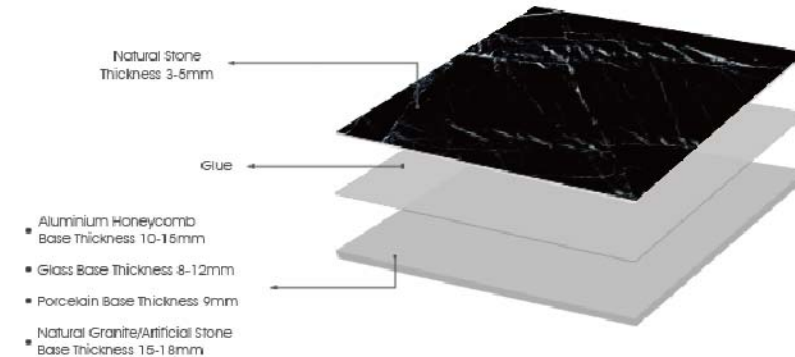

Therefore, marble laminated board came into market, which is a kind of technology that can save the resources of the earth and possess natural stone at the same time. Granite and limestone can use the same technology based on specific requirements

Advantage of marble laminated board:

1. The weight is lighter than the original marble board with the same specification, easy to install and transport;
2. The strength is twice than the original marble;
3. Continuous grinding is not easy to be broken, with high rate of finished products and pressure resistance.
After grinding and polishing, the gloss is higher than the original marble;
4. Maintaining the decorative performance of the original marble, reducing resource loss, and reducing production and construction costs.

3-5mm thick stone veneer(marble, granite or limestone) can be adhered to ceramic, granite, glass, aluminum Honeycomb sheet (with various thickness).

Marble Fountain Collection

PFM received a large water fountain project from east Europe in 2018. The fountain size is 12m (39.37ft) length by 7.6m (25.57ft) height. We produced it with Spain cream marfil marble and Hunan white marble. It spent 60 days to finish and loaded in 3 containers shipping to the destination.

During the project, we provided many feasible plans based on our experiences and submitted better solutions more than our customer's consideration.

We controlled each steps including drawing correction, carving quality and many details, such as measurement check, package mark on each part and installation suggestion. With all our passion submitted full solution with highest level of professionalism to our customer.
