

# **Material Qaulity Statement**

---

Promising Flooring Material Limited  
PFM QC DEPT.

# 1. Material selection

There is a big difference in material for natural stone from A grade to B grade.

## **A grade material characters:**

1. uniformed color, in one room, all the floor and walls are same theme of colors and vains.
2. No hidden cracks.
3. polishment grade is more than 80%.

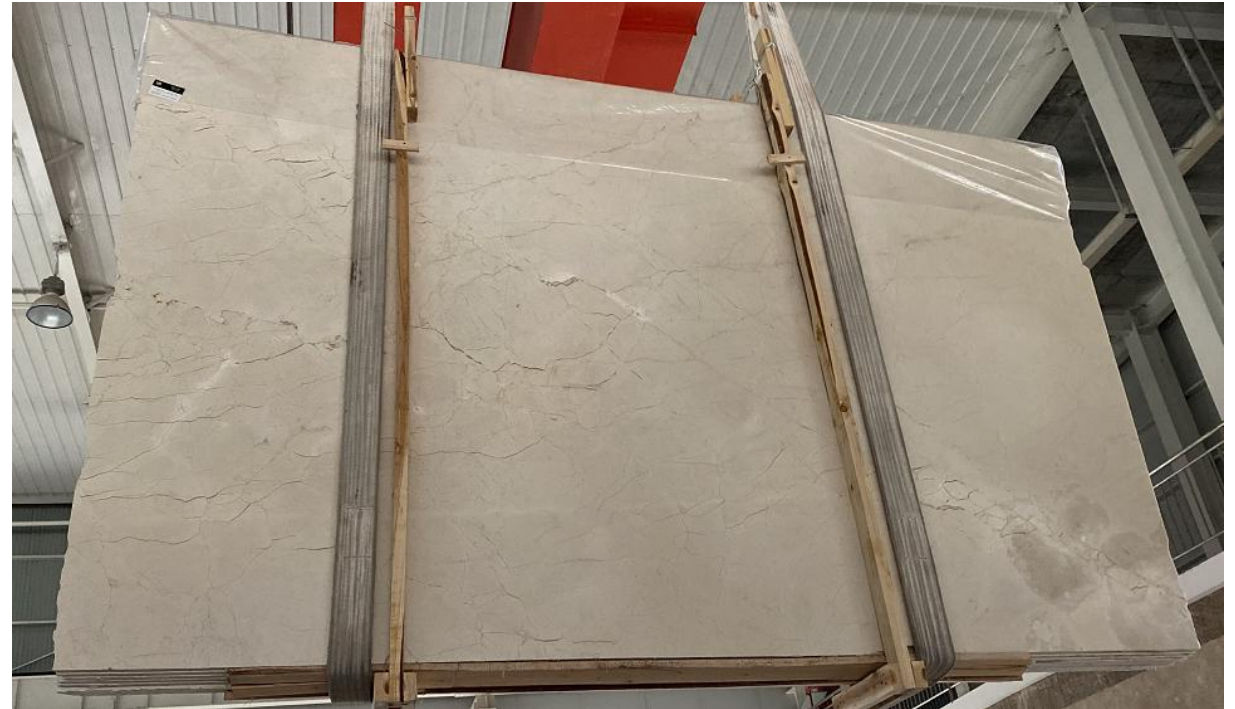

## **B grade material characters:**

1. defects in colors that looks like dirt.
  2. hidden cracks, that will cause damage during production and future problems.
  3. poor polishment, looks dull.

cream marfil B grade

## 2. Pre-assembling Process

Pre-assembling is an important step of our project control and management.  
it can eliminate the below problems:

1. make sure all pieces are cutted according to CAD file. Allow us to control the over all measurement.
2. our QC team will inspect piece by piece in details, finding defect ones and replace it before shipping.
3. our QC team will put a sticker to “map” each piece, easy for site assembling.

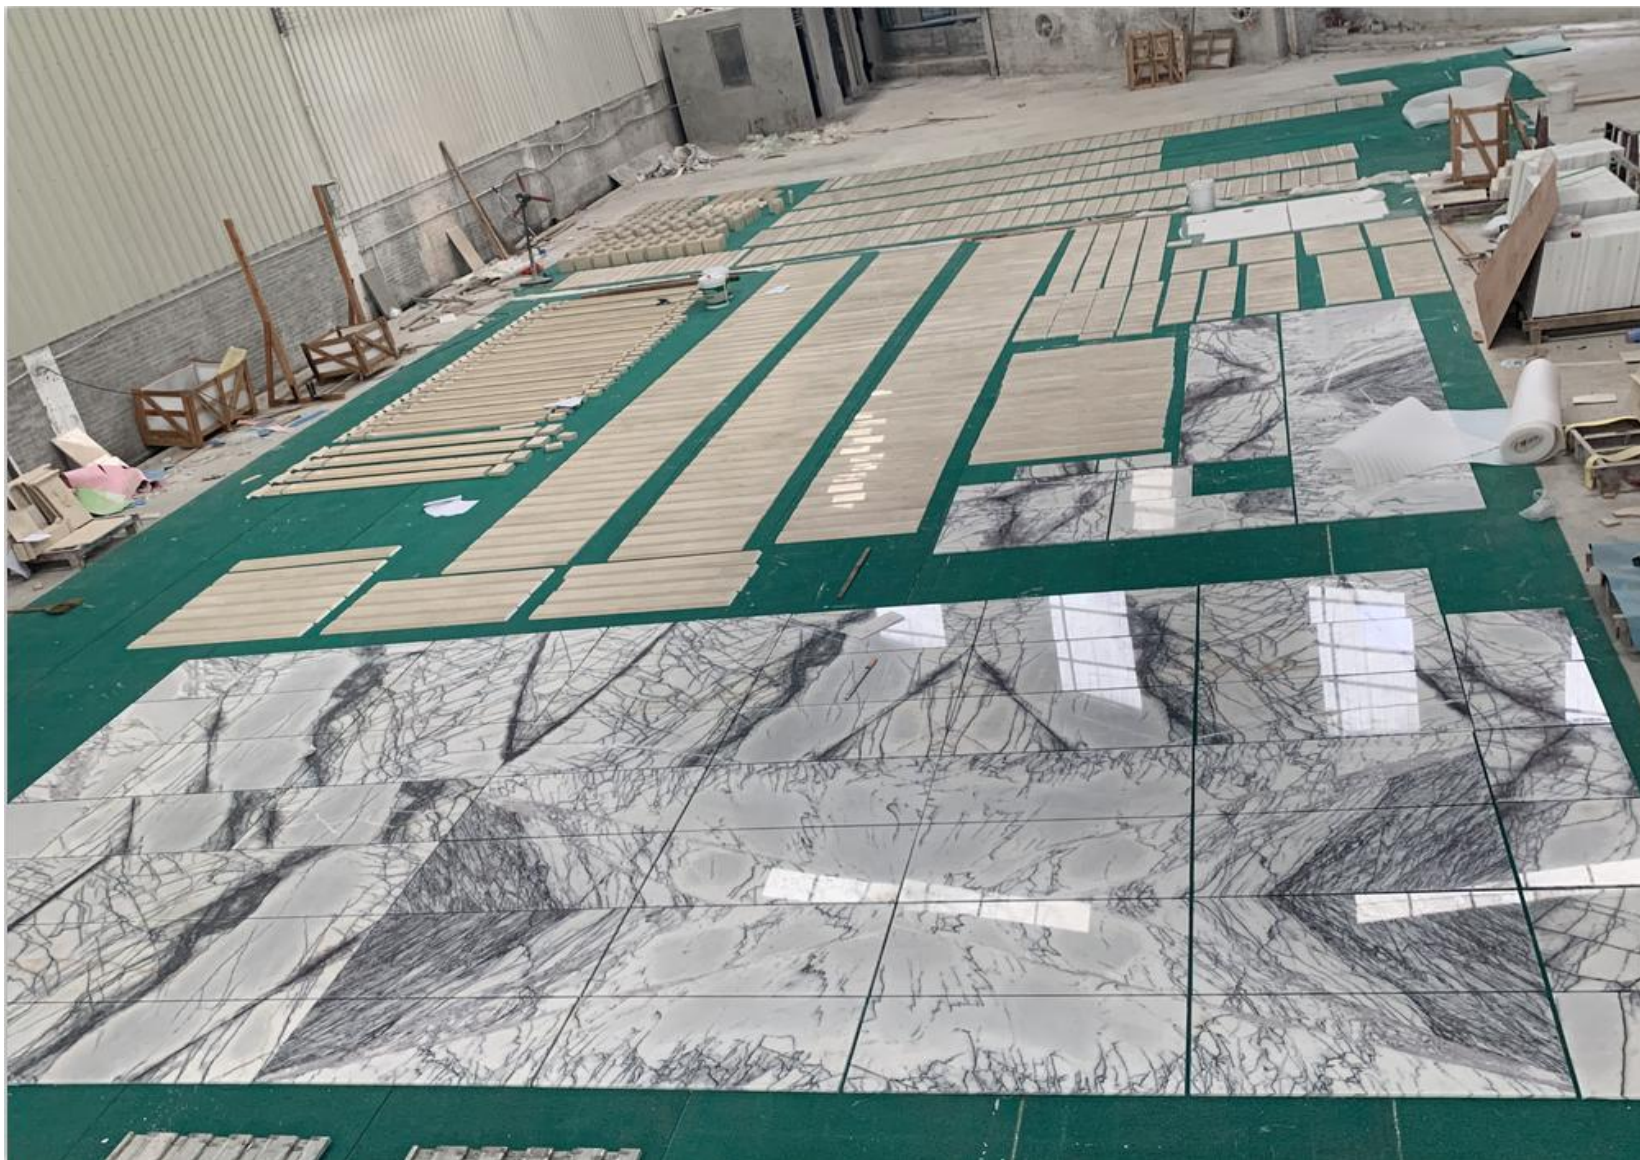

## 2. Pre-assembling Process

### 3. Wooden crate packages

A good quality package is very important for the importing and exporting business:

1. Ensure a safe transportation for a long time sea shipping
2. leave a 8cm base distance to allow the lift folk to make the loading and discharge easily.
