

Magnetic Digital Price Display

It adopts 7-segment display technology, the digits can be adjusted with a Flex Rod, no need to climbing up to a high place. It's designed for displaying the gasoline prices in service stations.

Introduction

- 01 The specification and type of digits can be produced to the sizes of the price signboard.
- 02 Two types of displaying:
Previous to light: take the interior light of the signboard as light source.
Light reflective: made out of light reflective material, and doesn't need any light source.
- 03 One Flex Rod for each price signboard.
