

**T_{aper}
B_{ore} W/WH weld-on hubs**

This type of taper bore weld-on hubs adopt the Europe standards.

Taper Bore Weld-on Hubs are made of steel; drilled, tapped and taper bored to receive standard taper bushes. The extended flange provides a convenient means of welding hubs into fan rotors, steel pulleys, plate sprockets, impellers, agitators and many other devices which must be firmly fastened.

These are entirely suitable for severe operating conditions. Tightening the screws will contract the bores of the bush thereby locking it to the shaft with the equivalent of a press fit. This type of construction eliminates mounting difficulties. It also prevents loosening and wearing that may occur during operation.
