

Cold formed welded structural hollow sections of non-alloy and fine grain steels —

Part 1: Technical delivery conditions

The European Standard EN 10219-1:2006 has the status of a
British Standard

ICS 77.140.75

National foreword

This British Standard is the official English language version of EN 10219-1:2006. It supersedes BS EN 10219-1:1997 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee ISE/12, Structural steels, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this committee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international or European publications referred to in this document may be found in the *BSI Catalogue* under the section entitled “International Standards Correspondence Index”, or by using the “Search” facility of the *BSI Electronic Catalogue* or of British Standards Online.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, the EN title page, pages 2 to 35 and a back cover.

The BSI copyright notice displayed in this document indicates when the document was last issued.

Amendments issued since publication

English Version

Cold formed welded structural hollow sections of non-alloy and fine grain steels - Part 1: Technical delivery conditions

Profils creux pour la construction soudés, formés à froid en aciers non alliés et à grains fins - Partie 1 : Conditions techniques de livraison

Kaltgefertigte geschweißte Hohlprofile für den Stahlbau aus unlegierten Baustählen und aus Feinkornbaustählen - Teil 1: Technische Lieferbedingungen

This European Standard was approved by CEN on 16 March 2006.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This European Standard (EN 10219-1:2006) has been prepared by Technical Committee ECISS/TC 10 "Structural steels - Grades and qualities", the secretariat of which is held by NEN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by October 2006, and conflicting national standards shall be withdrawn at the latest by October 2006.

This European Standard supersedes EN 10219-1:1997.

This European Standard has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s).

For relationship with EU Directive(s), see informative Annex ZA, which is an integral part of this European Standard.

This standard consists of the following parts under the general title 'Cold formed welded structural hollow sections of non-alloy and fine grain steels':

- Part 1: Technical delivery conditions
- Part 2: Tolerances, dimensions and sectional properties

It forms part of a series of standards on hollow sections together with EN 10210-1 and 2, which are also under revision.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

1 Scope

This part of this European Standard specifies the technical delivery conditions for cold formed welded structural hollow sections of circular, square or rectangular forms and applies to structural hollow sections formed cold without subsequent heat treatment.

Requirements for tolerances, dimensions and sectional properties are contained in EN 10219-2.

NOTE A range of steel grades is specified in this European Standard and the user should select the grade appropriate to the intended use and service conditions. The grades and mechanical properties of the finished hollow sections are compatible with those in EN 10025-2 and EN 10025-3.

2 Normative references

The following referenced documents are indispensable for the application of this European Standard. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms, definitions and symbols

3.1 Terms and definitions

For the purpose of this European Standard, the following terms and definitions apply in addition to or where different from those in EN 10020:2000, EN 10021:1993, EN 10052:1993 and EN 10266:2003.

3.1.1 cold forming

process where the main forming is done at ambient temperature

3.1.2 normalizing rolling

rolling process in which the final deformation is carried out in a certain temperature range leading to a material condition equivalent to that obtained after normalizing so that the specified values of the mechanical properties are retained even after subsequent normalizing

3.1.3 thermomechanical rolling

rolling process in which the final deformation is carried out in a certain temperature range leading to a material condition with certain properties which cannot be achieved or repeated by heat treatment alone

NOTE 1 Subsequent heating above 580 °C may lower the strength values.

NOTE 2 Thermomechanical rolling, leading to the delivery condition M, can include processes with an accelerated cooling rate, with or without tempering including self-tempering, but excluding direct quenching and quenching and tempering.

3.2 Symbols

For the purposes of this European Standard, the symbols defined in EN 10266:2003 apply.

4 Classification and designation

4.1 Classification

4.1.1 Within the strength grades of the non-alloy steels given in Annex A, four qualities JR, J0, J2 and K2 are specified. These differ in respect of specified impact requirements, limits on values of various elements, with particular reference to sulfur and phosphorus, and the inspection and testing requirements.

In accordance with the classification system in EN 10020, all steel grades in Annex A are non-alloy quality steels.

4.1.2 Within the strength grades of the fine grain steels given in Annex B, four qualities N, NL, M and ML are specified. These differ in respect of the carbon, sulfur and phosphorus content and low temperature impact properties.

In accordance with the classification system in EN 10020, steel grades S275NH, S275NLH, S355NH and S355NLH are non-alloy quality steels, S460NH, S460NLH, S275MH to S460MH and S275MLH to S460MLH are alloy special steels.

4.2 Designation

4.2.1 For the products covered by this European Standard the steel names are allocated in accordance with EN 10027-1; the steel numbers are allocated in accordance with EN 10027-2.

4.2.2 For non-alloy steel hollow sections the steel designation consists of:

- the number of this European Standard (EN 10219-1);
- the capital letter S for structural steel;
- the indication of the minimum specified yield strength for thicknesses ≤ 16 mm expressed in MPa¹;
- the capital letters JR for the qualities with specified impact properties at room temperature, the characters J0 for the qualities with specified impact properties at 0 °C and the characters J2 or K2 for the qualities with specified impact properties at -20 °C;
- the capital letter H to indicate hollow sections.

EXAMPLE Structural steel (S) with a specified minimum yield strength for thickness not greater than 16 mm of 275 MPa, with a minimum impact energy value of 27 J at 0 °C (J0), hollow section (H):

EN 10219-S275J0H

4.2.3 For fine grain steel structural hollow sections the steel designation consists of:

- the number of this European Standard (EN 10219-1);
- the capital letter S for structural steel;
- the indication of the minimum specified yield strength for thicknesses ≤ 16 mm expressed in MPa;
- the capital letter N to indicate normalized or normalized rolled feedstock material or the capital letter M to indicate thermomechanically rolled feedstock material (see 6.3);
- the capital letter L for the qualities with specified impact properties at -50 °C;
- the capital letter H to indicate hollow sections.

1) 1 MPa = 1 N/mm²

EXAMPLE Structural steel (S) with a specified minimum yield strength for thickness not greater than 16 mm of 355 MPa, normalized fine grain steel feedstock (N), with a minimum impact energy value of 27 J at -50 °C (L), hollow section (H):

EN 10219-S355NLH

5 Information to be obtained by the manufacturer

5.1 Mandatory information

The following information shall be obtained by the manufacturer at the time of enquiry and order:

- a) the quantity (mass or total length);
- b) the type of length, length range or length (see EN 10219-2);
- c) details of the product form:

CFCHS = cold formed circular hollow section;

CFRHS = cold formed square or rectangular hollow section;

- d) the steel designation (see 4.2);
- e) the dimensions (see EN 10219-2).

5.2 Options

A number of options are specified in this part of this European Standard. These are listed below with appropriate clause references. In the event that the purchaser does not indicate a wish to implement any of these options at the time of enquiry and order, the hollow sections shall be supplied in accordance with the basic specification.

- 1.1 Product analysis (see 6.6.1).
- 1.2 Cr, Cu, Mo, Ni, Ti and V cast analysis contents to be reported (see 6.6.2).
- 1.3 Verification of impact properties for qualities J0 and JR (see 6.7.4).
- 1.4 Suitability for hot dip galvanizing (see 6.8.2).
- 1.5 Weld repairs to the body of non-alloy structural steel hollow sections not permitted (see 6.9.4).
- 1.6 Specific inspection and testing for non-alloy quality grades JR and J0 (see 7.1.1).
- 1.7 Inspection document other than the standard document (see 7.2.2).

5.3 Example of an order

10 t of 8 m to 10 m random length cold finished square hollow sections in accordance with EN 10219, made from non-alloy quality structural steel S355NH, with specified outside dimensions 100 mm × 100 mm and wall thickness of 8 mm, supplied with product analysis (Option 1.1) and suitable for hot dip galvanising (Option 1.4).

10 t, 8-10m Random lengths – CFRHS – EN 10219 – S355NH – 100 x 100 x 8 – Options 1.1, 1.4

6 Requirements

6.1 General

Structural hollow sections of non-alloy steels shall conform to the requirements of Annex A. Structural hollow sections of fine grain steels shall conform to the requirements of Annex B.

EN 10219-1:2006 (E)

In addition, the general technical delivery requirements specified in EN 10021 shall apply.

6.2 Steel manufacturing process

6.2.1 The steel manufacturing process shall be at the discretion of the steel producer.

6.2.2 For the non-alloy steels given in Annex A, the method of deoxidation shall be as specified in Table A.1.

6.2.3 For the fine grain steels given in Annex B the method of deoxidation shall be as specified in Table B.1 or Table B.2.

6.2.4 The fine grain steels given in Annex B shall have a ferritic grain size equal to or finer than 6 when measured in accordance with EN ISO 643 (see 6.7.3).

6.3 Condition of feedstock material

According to the designation given in the order the following delivery conditions apply for the feedstock material used for the manufacture of cold formed hollow sections:

- as rolled or normalized/normalized rolled (N) for steels of qualities JR, J0, J2 and K2 according to Annex A;
- normalized/normalized rolled (N) for steels of qualities N and NL according to Annex B;
- thermomechanically rolled (M) for steels of quality M and ML according to Annex B.

6.4 Structural hollow section manufacturing process

6.4.1 Structural hollow sections shall be manufactured by electric welding or submerged arc welding without subsequent heat treatment (see 6.5). Hollow sections manufactured by a continuous process shall not include the welds used to join the lengths of strip prior to forming the hollow section, except that for helically welded submerged arc-welded (SAW) hollow sections, such welds shall be permitted when tested in accordance with 9.4.3.

6.4.2 Electric welded hollow sections are normally supplied without trimming the internal weld bead.

6.4.3 All NDT activities shall be carried out by qualified and competent level 1, 2 and/or 3 personnel authorised to operate by the employer.

The qualification shall be in accordance with EN 10256 or, at least, an equivalent to it.

It is recommended that the level 3 personnel be certified in accordance with EN 473 or, at least, an equivalent to it.

The operating authorisation issued by the employer shall be in accordance with a written procedure.

NDT operations shall be authorised by a level 3 NDT individual approved by the employer.

NOTE The definition of levels 1, 2 and 3 can be found in the appropriate standards, e.g. EN 473 and EN 10256.

6.5 Delivery condition

The hollow sections shall be delivered cold formed without subsequent heat treatment except that the weld seam may be in the as welded or heat treated condition.

NOTE For SAW hollow sections above 508 mm outside diameter it may be necessary to perform a warm shaping operation, which does not affect the mechanical properties, in order to meet the out-of-roundness tolerance requirements.

6.6 Chemical composition

6.6.1 The cast analysis reported by the steel producer shall apply and shall conform to the requirements given in Table A.1, Table B.1 or Table B.2.

The maximum carbon equivalent value (CEV) for all grades, based on the cast analyses, given in Table A.2 or Table B.3, shall apply. When determining the CEV the following formula shall be used.

$$CEV = C + \frac{Mn}{6} + \frac{Cr + Mo + V}{5} + \frac{Ni + Cu}{15}$$

Option 1.1 for products supplied with specific inspection and testing, a product analysis shall be reported.

Deviations of the product analysis from the specified limits of the cast analysis shall be in accordance with Table 1.

Table 1 — Permissible deviations of the product analysis from the specified limits of the cast analysis given in Tables A.1, B.1 and B.2

Element	Permissible maximum content in the cast analysis		Permissible deviation of the product analysis from specified limits for the cast analysis
	% by mass		
C ^a	≤ 0,20		+ 0,02
	> 0,20		+ 0,03
Si	≤ 0,60		+ 0,05
Mn	non-alloy	≤ 1,60	+ 0,10
	fine grain	≤ 1,70	- 0,05 + 0,10
P	non-alloy	≤ 0,040	+ 0,010
	fine grain	≤ 0,035	+ 0,005
S	non-alloy	≤ 0,040	+ 0,010
	fine grain	≤ 0,030	+ 0,005
Nb	≤ 0,050		+ 0,010
V	≤ 0,20		+ 0,02
Ti	≤ 0,05		+ 0,01
Cr	≤ 0,30		+ 0,05
Ni	≤ 0,80		+ 0,05
Mo	≤ 0,20		+ 0,03
Cu	≤ 0,35		+ 0,04
	0,35 < Cu ≤ 0,70		+ 0,07
N	≤ 0,025		+ 0,002
Al _{Total}	≥ 0,020		- 0,005
^a For S235JRH in thicknesses ≤ 16 mm, the permissible deviation = 0,4 % C, and for thicknesses >16 mm and ≤ 40 mm the permissible deviation = 0,05 % C.			

6.6.2 For non-alloy steel products supplied with specific inspection and testing the following option may be specified (see 7.1):

Option 1.2 the recording on the inspection certificate of the Cr, Cu, Mo, Ni, Ti and V content (cast analysis).

6.7 Mechanical properties

6.7.1 Under the inspection and testing conditions as specified in Clause 7 and in the delivery condition specified in 6.5, the mechanical properties shall conform to the relevant requirements of Tables A.3, B.4 or B.5.

NOTE Stress relief annealing at more than 580 °C or for over one hour may lead to deterioration of the mechanical properties.

6.7.2 For impact tests, standard V-notch test pieces in accordance with EN 10045-1 shall be used. If the nominal product thickness is not sufficient for the preparation of standard test pieces, the test shall be carried out using test pieces of width less than 10 mm, but not less than 5 mm. The minimum average values given in Tables A.3, B.4 and B.5 shall be reduced in direct proportion of the actual width of the test piece compared to that of the standard test piece.

Impact tests are not required for specified thicknesses < 6 mm.

EN 10219-1:2006 (E)

6.7.3 For fine grain steel hollow sections in thicknesses which do not permit impact test pieces of width ≥ 5 mm to be taken, the ferritic grain size (see 6.2.4) shall be verified by the method as described in EN ISO 643.

When aluminium is used as the grain refining element, the grain size requirement shall be deemed to be fulfilled if the cast analysis shows the aluminium content to be not less than 0,020 % total aluminium or alternatively 0,015 % soluble aluminium. In these cases, verification of the grain size is not required.

6.7.4 Subject to the limitations of 6.7.2

- a) the impact properties of structural hollow sections of steel qualities J2, K2, M, N, ML and NL shall be verified;
- b) the impact properties of structural hollow sections of steel qualities JR and J0 are not verified unless otherwise specified by the purchaser at the time of enquiry and order.

Option 1.3 for products in qualities JR and J0 supplied with specific inspection and testing (see Option 1.6), the verification of the impact properties is specified.

6.8 Technological properties

6.8.1 Weldability

The steels specified in this European Standard are weldable. General requirements for welding the products in accordance with this European Standard are given in EN 1011-1 and EN 1011-2.

NOTE 1 When welding these products, as product thickness, strength level and CEV increase, the occurrence of cold cracking in the welded zone forms the main risk. Cold cracking is caused by a combination of the following factors:

- high levels of diffusible hydrogen in the weld metal;
- a brittle structure in the heat affected zone;
- significant tensile stress concentrations in the welded joint.

NOTE 2 By using guidelines, specified for example in EN 1011-1, EN 1011-2 or any other relevant standard, the recommended welding conditions and the various welding ranges for the steel grades can be determined. These will vary depending on the product thickness, the applied welding energy, the design requirements, the electrode efficiency, the welding process and the weld metal properties.

6.8.2 Suitability for hot dip galvanizing

Option 1.4 the products shall be suitable for hot dip galvanizing.

6.9 Surface condition

6.9.1 The hollow sections shall have a smooth surface corresponding to the manufacturing method used; bumps, cavities or shallow longitudinal grooves resulting from the manufacturing process are permissible, provided the remaining thickness is within tolerance.

Surface defects may be removed by the manufacturer by grinding, provided that the thickness of the hollow section after the repair is not less than the minimum permissible thickness in accordance with EN 10219-2.

6.9.2 The ends of the hollow section shall be cut nominally square to the axis of the product.

6.9.3 For both non-alloy and fine grain hollow sections, repair of the weld shall be permitted.

6.9.4 For non-alloy hollow sections, repair of the body by welding shall be permitted unless otherwise specified. The conditions under which, and the extent to which, welding repair to the body may be carried out shall be agreed between the manufacturer and the purchaser.

Option 1.5 repair of the body by welding shall not be carried out.

For fine grain hollow sections, repair of the body by welding shall not be permitted unless otherwise agreed.

6.9.5 Welding repair shall be carried out by operators qualified in accordance with EN 287-1. Welding repair procedures shall be in accordance with EN ISO 15607, EN ISO 15609-1 and EN ISO 15614-1.

6.9.6 The repaired hollow section shall conform to all the requirements of this European Standard.

6.10 Non-destructive testing of welds

The seam weld of all hollow sections supplied with specific inspection and testing shall be subjected to a non-destructive test in accordance with 9.4.

6.11 Tolerances and mass

6.11.1 Tolerances

Tolerances shall be as specified in EN 10219-2.

6.11.2 Mass

Mass shall be determined using a density of 7,85 kg/dm³.

NOTE Dimensions, sectional properties and mass per unit length for a limited range of sizes of cold formed structural hollow sections are given in EN 10219-2. The purchaser should preferably select hollow section dimensions from this limited range of sizes.

7 Inspection

7.1 Types of inspection

7.1.1 Non-alloy steel hollow sections of qualities JR and J0 (see Annex A) shall be supplied with non-specific inspection in accordance with EN 10021 unless Option 1.6 is specified.

Option 1.6 qualities JR and J0 shall be supplied with specific inspection.

7.1.2 Non-alloy steel hollow sections of qualities J2 and K2 (see Annex A) and fine grain steel hollow sections of qualities M, N, ML and NL (see Annex B) shall be supplied with specific inspection in accordance with EN 10021.

7.2 Types of inspection document

7.2.1 For products supplied with non-specific inspection a test report (2.2) in accordance with EN 10204 shall be provided.

The test report shall contain the following codes and relevant information in accordance with EN 10168:

A — Commercial transactions and parties involved.

B — Description of products to which the test report applies.

C — Information on tests as follows:

C10-C13 — Tensile test;

C71-C92 — Cast analysis.

Z — Validation.

7.2.2 For products supplied with specific inspection an inspection certificate 3.1 in accordance with EN 10204 shall be provided unless Option 1.7 is specified.

EN 10219-1:2006 (E)

Option 1.7 an inspection certificate 3.2 in accordance with EN 10204 shall be supplied. Where this document is specified, the purchaser shall notify the manufacturer of the address of the organization or person nominated by him to carry out the inspection and validate the inspection document. It shall also be agreed which party shall issue the certificate.

The inspection certificate shall contain the following codes and related information in accordance with EN 10168:

- A — Commercial transactions and parties involved.
- B — Description of products to which the inspection certificate applies.
- C — Information on tests as follows:
 - C02-C03 — Direction of test pieces and test temperature;
 - C10-C13 — Tensile test — Test piece shape and test results;
 - C40-C43 — Impact test — Test piece type and test results, if applicable;
 - C71-C92 — Cast analysis and, if applicable, product analysis.
- Z — Validation.

7.3 Summary of inspection

The requirements for inspection are given in Table 2 for hollow sections of non-alloy steels and in Table 3 for hollow sections of fine grain steels.

Table 2 — Inspection programme for hollow sections of non-alloy steels

Inspection requirements				Inspection programme	
Type of test			Subclause reference(s)	Non-specific inspection	Specific inspection
Mandatory tests	1	Cast analysis	6.6 9.1	One result per delivery item	One per cast
	2	Tensile test	6.7 9.2	One result per delivery item	One per test unit ^{a b}
	3	Impact test for qualities J2 and K2 only	6.7 9.2	Not applicable	One set per test unit ^{a b}
	4	Surface condition and dimensions	6.9 6.11 9.3	See 9.3	See 9.3
	5	NDT of the weld	6.10 9.4	Not applicable	All products, full length

8 Sampling

8.1 Frequency of tests

8.1.1 For products supplied with non-specific inspection, see Table 2.

8.1.2 For products supplied with specific inspection, the verification of the mechanical properties and product analysis, if applicable, shall be carried out by test unit. A test unit is defined as a quantity of hollow sections from one or more cast(s) of the same grade and dimensions manufactured by the same process (i.e. electric welding or submerged arc welding), and, if applicable, in the same heat treatment condition, submitted for acceptance at the same time.

The following samples shall be taken from one sample product of each test unit:

- 1 sample for tensile testing;
- 1 sample sufficient for 2 sets of 3 impact test pieces;
- 1 sample for product analysis, when required, see 8.2.1.

8.1.3 The mass of a test unit shall not exceed the maximum tonnage of sections specified in Table 4.

Table 4 — Test units

Type of hollow section		Test unit
Circular	Square or rectangular	
Outside diameter <i>D</i> mm	External perimeter mm	Mass maximum t
≤ 114,3	≤ 400	40
> 114,3 ≤ 323,9	> 400 ≤ 800	50
> 323,9	> 800	75

8.2 Preparation of samples and test pieces

8.2.1 Selection and preparation of samples for chemical analysis

Samples for product analysis, when required, shall be taken from the sample product or alternatively from test pieces used for mechanical testing or from the full thickness of the hollow section at the same location as for the mechanical test samples. The preparation of samples shall be in accordance with EN ISO 14284.

8.2.2 Preparation of test pieces for mechanical tests

8.2.2.1 General

The requirements of EN ISO 377 shall apply in conjunction with the test piece location specified in 8.2.3.

8.2.2.2 Tensile test pieces

The requirements of EN 10002-1, as appropriate, shall apply.

Test pieces may be non-proportional, but in cases of dispute proportional test pieces having a gauge length $L_0 = 5,65\sqrt{S_0}$ shall be used (see 9.2.2). For thicknesses less than 3 mm, a gauge length of $L_0 = 80$ mm shall be used provided a test piece width of 20 mm can be achieved, otherwise a gauge length of 50 mm shall be used with a test piece width of 12,5 mm.

8.2.2.3 Impact test pieces

Impact V-notch test pieces shall be prepared and machined in accordance with EN 10045-1. In addition, the following requirements shall apply:

- a) for specified thicknesses > 12 mm, standard test pieces shall be machined in such a way that one side is not further away than 2 mm from a rolled surface;
- b) for specified thicknesses ≤ 12 mm, when test pieces with reduced sections are used, the width shall be ≥ 5 mm.

NOTE Test piece size is dependent on the actual thickness of the sample and, for circular hollow sections, allowance also needs to be made for the curvature of the section.

8.2.3 Location and orientation of samples for mechanical tests

8.2.3.1 Tensile test pieces

The test pieces for tensile testing shall conform to the following:

- a) the test piece may be the full section of the product;
- b) for circular sections, not tested in full section, the test pieces shall be taken either longitudinally or transversely, at the discretion of the manufacturer, at a point remote from the weld (see Annex C);
- c) for square or rectangular sections, not tested in full section, the test pieces shall be taken either longitudinally or transversely, at the discretion of the manufacturer, midway between the corners, from one of the sides not containing the weld (see Annex C).

8.2.3.2 Impact test pieces

Test pieces for impact testing shall conform to the following:

- a) for circular sections the test pieces shall be taken either longitudinally or transversely, at the discretion of the manufacturer, at a point remote from the weld (see Annex C);
- b) for square or rectangular sections the test pieces shall be taken either longitudinally or transversely, at the discretion of the manufacturer, midway between the corners, from one of the sides not containing the weld (see Annex C).

9 Test methods

9.1 Chemical analysis

The elements to be determined and reported shall be those given in Table A.1, and Option 1.2 if specified, or those in Table B.1 or Table B.2, as applicable.

The choice of a suitable physical or chemical analytical method for the analysis shall be at the discretion of the manufacturer.

In case of dispute, the method used shall be agreed taking into account CR 10261.

9.2 Mechanical tests

9.2.1 Test temperature

Tensile tests shall be carried out in the temperature range 10 °C to 35 °C. Impact tests shall be carried out at the temperatures specified in Table A.3 for non-alloy steels and Tables B.4 or B.5 for fine grain steels.

9.2.2 Tensile tests

The tensile test shall be carried out in accordance with EN 10002-1.

For the specified yield strengths in Tables A.3, B.4 and B.5, the upper yield strength (R_{eH}) shall be determined.

If a yield phenomenon is not present, the 0,2 % proof strength non-proportional extension ($R_{p0,2}$) or the 0,5 % proof strength total extension ($R_{t0,5}$) shall be determined. In cases of dispute, the 0,2 % proof strength ($R_{p0,2}$) shall apply.

If a non-proportional test piece is used, the percentage elongation value obtained after fracture (A) shall be converted to the value for a gauge length $L_0 = 5,65 \sqrt{S_0}$ using the conversion tables given in EN ISO 2566-1.

For thicknesses less than 3 mm the percentage elongation may be reported for a gauge length of 80 mm or 50 mm (see 8.2.2.2).

9.2.3 Impact tests

The impact test shall be carried out in accordance with EN 10045-1. In addition, the following requirements shall apply:

- a) The average value of a set of three test pieces shall be equal to or greater than the specified value. One individual value may be below the specified value, provided that it is not less than 70 % of that value;
- b) If the conditions under a) are not satisfied then an additional set of three test pieces may be taken, at the discretion of the manufacturer, from the same sample and tested. To consider the test unit as conforming after testing the second set, the following conditions shall all be satisfied simultaneously:
 - 1) The average value of the six tests shall be equal to or greater than the minimum specified value;
 - 2) Not more than two of the six individual values may be lower than the minimum specified value;
 - 3) Not more than one of the six individual values may be lower than 70 % of the minimum specified value.
- c) If these conditions are not satisfied, the sample product is rejected and retests shall be carried out on the remainder of the test unit (see 9.5).

9.3 Visual inspection and dimensional check

9.3.1 Visual inspection

The hollow sections shall be visually inspected for compliance with the requirements of 6.9.

9.3.2 Dimensional check

The dimensions of the hollow sections shall be checked for compliance with the requirements of EN 10219-2.

9.4 Non-destructive testing

9.4.1 General

When the welds of structural hollow sections are to be subjected to non-destructive testing, the method shall be in accordance with 9.4.2 or 9.4.3. At the manufacturer's discretion, the non-destructive testing may be carried out

either on the circular shape prior to final forming or on the circular, square or rectangular hollow sections after final forming.

9.4.2 Electric welded sections

The weld seam of electric welded hollow sections shall be tested in accordance with one of the following European Standards. The standard to be applied is at the discretion of the manufacturer.

- a) EN 10246-3 to acceptance level E4, with the exception that the rotating tube/pancake coil technique shall not be permitted;
- b) EN 10246-5 to acceptance level F5;
- c) EN 10246-8 to acceptance level U5.

9.4.3 Submerged arc welded sections

The weld seam of submerged arc welded hollow sections shall be tested either in accordance with EN 10246-9 to acceptance level U4 or by radiography in accordance with EN 10246-10 with an image quality class R2.

Butt welds, used to join lengths of strip/plate together in the spiral submerged arc weld process, shall be permitted, provided that the butt weld is tested to the same type of procedure and meets the same acceptance level as the main weld seam.

9.5 Retests, sorting and reprocessing

For retests, sorting and reprocessing, EN 10021 shall apply.

10 Marking

10.1 Except as provided for in 10.2 for hollow sections which are bundled, each hollow section shall be marked by suitable and durable methods such as painting, stamping, adhesive labels or attached tags with the following:

- the steel designation e.g. EN 10219-S275J0H;
- the manufacturer's name or trademark;
- in the case of specific inspection:
 - an identification number, e.g. order number, which permits the correlation of the product or delivery unit to the related document;
 - the mark of the external inspection representative (where applicable).

10.2 Where the products are supplied bundled, the marking required in 10.1 shall be on a label, which shall be securely attached to the bundle.

11 Evaluation of conformity

Where evaluation of conformity is required for regulatory purposes Annex D shall apply.

Annex A (normative)

Structural hollow sections of non-alloy quality steels — Chemical composition and mechanical properties

Table A.1 — Chemical composition — Cast analysis for product thickness ≤ 40 mm

Steel grade		Type of de-oxidation ^a	% by mass, maximum					
Steel name	Steel number		C	Si	Mn	P	S	N ^b
S235JRH	1.0039	FF	0,17	—	1,40	0,040	0,040	0,009
S275J0H	1.0149	FF	0,20	—	1,50	0,035	0,035	0,009
S275J2H	1.0138	FF	0,20	—	1,50	0,030	0,030	—
S355J0H	1.0547	FF	0,22	0,55	1,60	0,035	0,035	0,009
S355J2H	1.0576	FF	0,22	0,55	1,60	0,030	0,030	—
S355K2H	1.0512	FF	0,22	0,55	1,60	0,030	0,030	—

a The deoxidation method is designated as follows:
FF: Fully killed steel containing nitrogen binding elements in amounts sufficient to bind available nitrogen (e.g. min. 0,020 % total Al or 0,015 % soluble Al).

b The maximum value for nitrogen does not apply if the chemical composition shows a minimum total Al content of 0,020 % with a minimum Al/N ratio of 2:1, or if sufficient other N-binding elements are present. The N-binding elements shall be recorded in the Inspection Document.

Table A.2 — Maximum carbon equivalent value (CEV) based on cast analysis ^a

Steel grade		Maximum CEV for nominal thicknesses ≤ 40 mm
Steel name	Steel number	
S235JRH	1.0039	%
S275J0H	1.0149	0,35
S275J2H	1.0138	0,40
S355J0H	1.0547	0,40
S355J2H	1.0576	0,45
S355K2H	1.0512	0,45

^a See 6.6.2, Option 1.2.

Table A.3 — Mechanical properties of non-alloy steel hollow sections in thicknesses ≤ 40 mm

Steel grade		Minimum yield strength R_{eH} MPa		Tensile strength R_m MPa		Minimum elongation A^d %	Minimum impact energy KV^e J		
Steel name	Steel number								
		Specified thickness mm		Specified thickness mm		Specified thickness mm	at test temperature of		
		≤ 16	$> 16 \leq 40$	< 3	$\geq 3 \leq 40$	≤ 40	-20 °C	0 °C	20 °C
S235JRH ^a	1.0039	235	225	360-510	360-510	24 ^b	-	-	27
S275J0H ^a	1.0149	275	265	430-580	410-560	20 ^c	-	27	-
S275J2H	1.0138						27	-	-
S355J0H ^a	1.0547	355	345	510-680	470-630	20 ^c	-	27	-
S355J2H	1.0576						27	-	-
S355K2H	1.0512						40 ^f	-	-

^a The impact properties are verified only when Option 1.3 is specified.

^b For thicknesses > 3 mm and section sizes $D/T < 15$ (round) and $(B+H)/2T < 12,5$ (square and rectangular) the minimum elongation is reduced by 2. For thicknesses ≤ 3 mm the minimum value for elongation is 17 %.

^c For section sizes $D/T < 15$ (circular) and $(B+H)/2T < 12,5$ (square and rectangular) the minimum elongation is reduced by 2.

^d For thicknesses < 3 mm see 9.2.2.

^e For impact properties for reduced section test pieces see 6.7.2.

^f This value corresponds to 27J at -30 °C (see EN 1993-1-1).

Annex C (normative)

Location of samples and test pieces

Figures C.1 and C.2 give information on the location of samples and test pieces for hollow sections (see 8.2.2).

Key

- 1 At any point on circumference but remote from the weld

Figure C.1 — Circular sections

Key

- 1 Alternative positions (on any side except a side containing the weld)

Figure C.2 — Square and rectangular sections

Annex D

(normative)

Evaluation of conformity

D.1 General

The conformity of steel hollow sections to the requirements of this standard and with the stated values (including classes) shall be demonstrated by:

- initial type testing
- factory production control by the manufacturer, including product assessment.

For the purposes of testing, steel hollow sections may be grouped into families, where it is considered that the selected property/properties is/are common to all steel hollow sections within that family.

D.2 Type testing

D.2.1 Initial type testing

D.2.1.1 General

An initial type test is the complete set of tests or other procedures, determining the performance characteristics of samples representative of the product types.

To show conformity with this standard, initial type testing shall be performed on first use of this standard for steel hollow sections being put onto the market.

In addition initial type testing shall be performed:

- at the beginning of the production of a new or modified steel hollow sections design;
- if a change occurs in the feedstock;
- at the beginning of a new or modified method of production;

where this would change significantly one or more of the performance characteristics.

In cases where this would mean assessment of steel hollow sections for which type testing in accordance with this standard had already been performed, the testing frequency may be reduced:

- if it has been established that the performance characteristics have not been affected compared to the steel hollow sections already tested;
- if historical data is available (see D.2.1.3).

D.2.1.2 Characteristics

The assessment of the following performance characteristics is required:

EN 10219-1:2006 (E)

- tolerances on dimensions and shape;
- elongation;
- tensile strength;
- yield strength;
- impact strength;
- weldability (chemical composition).

The following performance characteristics are not subject to initial type testing for the following reasons:

- release of dangerous substances – this may be addressed indirectly by controlling the content of the substance(s) concerned;
- bendability, cold/warm formability – the material is inherently ductile and therefore a specific test for these characteristics is not required;
- fatigue, fracture toughness/brittle strength – these characteristics are controlled by the method of use which is covered by EN 1993-1-1.

D.2.1.3 Use of historical data

Tests previously performed on the same steel hollow sections in accordance with the provisions of this standard (same performance characteristic(s), test method, sampling procedure, system of attestation of conformity, etc.) may be taken into account.

D.2.2 Sampling, testing and conformity criteria

D.2.2.1 Sampling

Initial type testing shall be performed on random samples of steel hollow sections representative of the types of steel hollow sections manufactured.

D.2.2.2 Testing and conformity criteria

The number of steel hollow sections to be tested (or assessed) shall be in accordance with Table D.1.

Table D.1 — Sampling and conformity criteria for type testing of steel hollow sections

Performance characteristic	Requirement clause	Assessment method	Number of tests/samples	Conformity criteria
tolerances on dimensions and shape	EN 10219-2 :2006, Clause 6	EN 10219-2 :2006, Clause 7	one per test unit (see 8.1.3 for definition of test unit)	6.11
elongation	6.7.1, Tables A.3, B.4 and B.5	9.2.2		6.7
tensile strength	6.7.1, Tables A.3, B.4 and B.5	9.2.2		6.7
yield strength	6.7.1, Tables A.3, B.4 and B.5	9.2.2		6.7
impact strength	6.7.2, Tables A.3, B.4 and B.5	9.2.3		6.7
weldability (chemical composition)	6.6, Tables A.1, B.1, B.2 and 6.8.1	9.1		6.6

The results of all type tests shall be recorded and records retained by the manufacturer for at least 5 years.

D.3 Factory production control (FPC)

D.3.1 General

The manufacturer shall establish, document and maintain an FPC system to ensure that the products placed on the market conform to the declared performance characteristics. The FPC system shall consist of written procedures (works' manual), regular inspections and tests and/or assessments and the use of the results to control equipment, feedstock and other incoming material supply, the production process and the product. Records shall remain legible, readily identifiable and retrievable.

An FPC system conforming with the requirements of EN ISO 9001, and made specific to the product and the requirements of this standard, shall be considered to satisfy the above requirements.

The results of inspections, tests or assessments requiring action shall be recorded, as shall any action taken. The action to be taken when control values or criteria are not met shall be recorded and retained for the period specified in the manufacturer's FPC procedures.

D.3.2 FPC requirements for all manufacturers

D.3.2.1 General

The manufacturer shall establish procedures to ensure that the production tolerances allow for the performance characteristics of the steel hollow sections to be in conformity with the declared values derived from initial type testing.

The performance characteristics and the means of verification are:

- elongation, tensile strength and yield strength; tensile test in accordance with EN 10002-1;
- impact strength; impact test in accordance with EN 10045-1;
- weldability; chemical analysis in accordance with the methods listed in CR 10261.

The minimum frequency of testing shall be in accordance with Table D.1.

The manufacturer shall record the results of the tests specified above. These records shall, as a minimum, include the following information:

- identification of the steel hollow sections tested;
- date of sampling and testing;
- tests performed;
- test results.

D.3.3 Manufacturer-specific FPC system requirements

D.3.3.1 Personnel

The responsibility, authority and the relationship between personnel that manages, performs or verifies work affecting product conformity, shall be defined. This applies in particular to personnel that needs to initiate actions preventing product non-conformities from occurring, actions in case of non-conformities and to identify and register product conformity problems. Personnel performing work affecting product conformity shall be competent on the basis of appropriate education, training, skills and experience for which records shall be maintained.

D.3.3.2 Equipment

All weighing, measuring and testing equipment necessary to achieve, or produce evidence of, conformity shall be calibrated or verified and regularly inspected according to documented procedures, frequencies and criteria. Control of monitoring and measuring devices shall comply with the appropriate clause of EN ISO 9001.

All equipment used in the manufacturing process shall be regularly inspected and maintained to ensure use, wear or failure does not cause inconsistency in the manufacturing process.

Inspections and maintenance shall be carried out and recorded in accordance with the manufacturer's written procedures and the records retained for the period defined in the manufacturer's FPC procedures.

D.3.3.3 Design process

The factory production control system shall document the various stages in the design of the steel hollow sections, and identify the checking procedure and those individuals responsible for all stages of design.

During the design process itself, a record shall be kept of all checks, their results, and any corrective actions taken. This record shall be sufficiently detailed and accurate to demonstrate that all stages of the design phase, and all checks, have been carried out satisfactorily. Compliance with EN ISO 9001:2000, 7.3 shall be deemed to satisfy the requirements of this clause.

D.3.3.4 Feedstock and incoming materials

The specifications of all incoming feedstock and materials shall be documented, as shall the inspection scheme for ensuring their conformity. The verification of conformity of the feedstock and incoming materials with their specification shall be in accordance with EN ISO 9001:2000, 7.4.3.

D.3.3.5 In-process control

The manufacturer shall plan and carry out production under controlled conditions. Compliance with EN ISO 9001:2000, 7.5.1 and 7.5.2 shall be deemed to satisfy the requirements of this clause.

D.3.3.6 Traceability and marking

Steel hollow sections shall be identifiable and traceable with regard to their production origin, see Clause 10. The manufacturer shall have written procedures ensuring that processes related to affixing traceability codes and/or markings, see Clause 10, are inspected regularly. Compliance with EN ISO 9001:2000, 7.5.3 shall be deemed to satisfy the requirements of this clause.

D.3.3.7 Non-conforming products

The manufacturer shall have written procedures which specify how non-conforming products shall be dealt with. Any such events shall be recorded as they occur and these records shall be kept for the period defined in the manufacturer's written procedures. Compliance with EN ISO 9001:2000, 8.3 shall be deemed to satisfy the requirements of this clause.

D.3.3.8 Corrective action

The manufacturer shall have documented procedures that instigate action to eliminate the cause of non-conformities in order to prevent recurrence. Compliance with EN ISO 9001:2000, 8.5.2 shall be deemed to satisfy the requirements of this clause.

D.3.3.9 Handling and storage

The manufacturer shall have written procedures stating methods of product handling and shall provide suitable storage areas to prevent damage or deterioration of the product.

Annex ZA (informative)

Clauses of this European Standard addressing the provisions of the EU Construction Products Directive

ZA.1 Scope and relevant characteristics

This European Standard has been prepared under a mandate M120 (Structural Metallic Products and ancillaries) given to CEN by the European Commission and the European Free Trade Association.

The clauses of this European Standard shown in this annex meet the requirements of the mandate given under the EU Construction Products Directive (89/106/EEC).

Compliance with these clauses confers a presumption of fitness of the construction products covered by this annex for the intended uses indicated herein; reference shall be made to the information accompanying the CE marking.

WARNING: Other requirements and other EU Directives, not affecting the fitness for intended use may be applicable to a construction product falling within the scope of this standard.

NOTE 1 In addition to any specific clauses relating to dangerous substances contained in this standard, there may be other requirements applicable to the products falling within its scope (e.g. transposed European legislation and national laws, regulations and administrative provisions). In order to meet the provisions of the EU Construction Products Directive, these requirements need also to be complied with, when and where they apply.

NOTE 2 *An informative database of European and national provisions on dangerous substances is available at the Construction web site on EUROPA (accessed through <http://europa.eu.int/comm/enterprise/construction/internal/dangsub/dangmain.htm>).*

This annex establishes the conditions for the CE marking of the structural hollow sections intended for the uses indicated in Table ZA.1 and shows the relevant clauses applicable.

The scope of this annex is defined by Table ZA.1.

Table ZA.1 — Relevant clauses for product and intended use

Product: Steel hollow sections			
Intended use: To be used in metal structures or in composite metal and concrete structures			
Essential characteristic	Requirement clauses in this European Standard	Levels and/or classes	Notes
Tolerances on dimensions and shape.	EN 10219-2:2006, Clause 6	—	Pass/fail limits are specified in EN 10219-2:2006, Table 2
Elongation	6.7.1, Tables A.3, B.4 and B.5	—	% Values to be achieved are contained in Annexes A and B.
Tensile strength and yield strength	6.7.1, Tables A.3, B.4 and B.5	—	MPa Values to be achieved are contained in Annexes A and B.
Impact strength	6.7.2, Tables A.3, B.4 and B.5	—	J Values to be achieved are contained in Annexes A and B.
Weldability	6.6, Tables A.1, B.1, B.2 and 6.8.1	—	CEV value specified. Tables are in Annexes A and B, formula for calculation is specified.
Durability ^a	6.8.2	—	By option to specify that the product is suitable for galvanizing.
^a Durability (against corrosion) is dependent on the method of protection and/or thickness of coating.			

The requirement on a certain characteristic is not applicable in those Member States (MSs) where there are no regulatory requirements on that characteristic for the intended use of the product. In this case, manufacturers placing their products on the market of these MSs are not obliged to determine nor declare the performance of their products with regard to this characteristic and the option “No performance determined” (NPD) in the information accompanying the CE marking (see Clause ZA.3) may be used. The NPD option may not be used, however, where the characteristic is subject to a threshold level.

ZA.2 Procedure for the attestation of conformity of steel hollow sections

ZA.2.1 System of attestation of conformity

The system of attestation of conformity of steel hollow sections indicated in Table ZA.1, in accordance with the Decision of the Commission (1998/214/EC) of 18 March 1998 as given in the Annex III of the mandate for Structural metallic products and ancillaries is shown in Table ZA.2 for the intended uses and relevant levels or classes.

Table ZA.2 — System of attestation of conformity

Product	Intended use	Level(s) or class(es)	Attestation of conformity system(s)
Steel hollow section	To be used in metal structures or in composite metal and concrete structures.	-	2+
System 2+: See Directive 89/106/EEC (CPD), Annex III.2. (ii), First possibility, including certification of the factory production by an approved body on the basis of its continuous surveillance, assessment and approval.			

The attestation of conformity of the steel hollow section in Table ZA.1 shall be according to the evaluation of conformity procedures indicated in Table ZA.3 resulting from application of the clauses of this European Standard indicated therein.

Table ZA.3 — Assignment of conformity tasks for steel hollow sections under system 2+

Tasks		Content of task	Evaluation of conformity clauses to apply
Tasks under the responsibility of the manufacturer	Factory production control	All parameters related to all characteristics of Table ZA.1	Clause 11 D.3
	Initial type testing	All relevant characteristics of Table ZA.1	Clause 11 D.2
Tasks under the responsibility of the notified body	Certification of factory production control system on the basis of:	Initial inspection of factory and factory production control system	Clause 11 D.3
		Continuous surveillance, assessment and approval of factory production control system	

ZA.2.2 EC Certificate and declaration of conformity

The manufacturer or his agent established in the European Economic Area (EEA), shall prepare and retain a declaration of conformity, which authorises the affixing of the CE marking. This declaration shall include:

- name and address of the manufacturer, or his authorised representative established in the EEA, and the place of production;
- description of the product type (type, identification, use...), and a copy of the information accompanying the CE marking;
- provisions to which the product conforms (e.g. Annex ZA of this European Standard);
- particular conditions applicable to the use of the product (if necessary);
- the number of the accompanying factory production control system certificate;
- name of, and position held by, the person empowered to sign the declaration on behalf of the manufacturer or his authorised representative.

The declaration shall be accompanied by a factory production control system certificate, drawn up by a notified body, which shall contain in addition to the information above, the following:

- name and address of the notified body;
- the number of the factory production control system certificate;
- conditions and period of validity of the certificate, where applicable;
- name of, and position held by, the person empowered to sign the certificate.

This declaration and certificate shall be presented in the official language or language(s) acceptable to the Member State in which the product is to be used.

ZA.3 CE Marking and labelling

The CE marking shall be in accordance with Directive 93/68/EEC²⁾ and be placed on the accompanying commercial documents or inspection document. The CE marking consists of the letters “CE” in the specified form and shall be accompanied by the following information.

- Identification number of the notified body;
- name or identifying mark of the producer;
- the last two digits of the year of marking;
- the number of the EC certificate of conformity and the name or number of the notified body with regard to the factory production control system;
- product designation (see 4.2);
- “No performance determined” for characteristics where this is relevant.

² Council Directive 93/68/EEC of July 1993 amending 12 Directives, including Directive 89/106/EEC harmonising the provisions for the CE marking.

EN 10219-1:2006 (E)

The “No performance determined” (NPD) option may not be used where the characteristic is subject to a threshold level. Otherwise, the NPD option may be used when and where the characteristic, for a given intended use, is not subject to regulatory requirements in the Member State of destination.

Figure ZA.1 gives an example of the information to be given on the product, label, packaging and/or commercial documents.

 01234	<p><i>CE conformity marking, consisting of the “CE”-symbol given in Directive 93/68/EEC.</i></p> <p><i>Identification number of the certification body</i></p>
<p>AnyCo Ltd, PO Box 21, B-1050</p> <p>06</p> <p>01234-CPD-00234</p>	<p><i>Name or identifying mark and registered address of the producer</i></p> <p><i>Last two digits of the year in which the marking was affixed</i></p> <p><i>FPC Certificate number</i></p>
<p>EN 10219-1:2005</p> <p>Cold formed steel hollow sections for building and civil engineering</p> <p>Product designation S355J2H</p> <p>Dangerous substance X : Less than 0,2 ppm</p> <p>Durability: NPD</p> <p>(by coating)</p>	<p><i>No. of European Standard</i></p> <p><i>Description of product and information on regulated characteristics</i></p>

Figure ZA.1 – Example CE marking information

In addition to any specific information relating to dangerous substances shown above, the product should also be accompanied, when and where required and in the appropriate form, by documentation listing any other legislation on dangerous substances for which compliance is claimed, together with any information required by that legislation.

NOTE European legislation without national derogations need not be mentioned.

The European Standard EN 10219-2:2006 has the status of a
British Standard

ICS 77.140.75

National foreword

This British Standard is the official English language version of EN 10219-2:2006. It supersedes BS EN 10219-2:1997 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee ISE/12, Structural steel, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this committee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international or European publications referred to in this document may be found in the *BSI Catalogue* under the section entitled “International Standards Correspondence Index”, or by using the “Search” facility of the *BSI Electronic Catalogue* or of British Standards Online.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, the EN title page, pages 2 to 36, an inside back cover and a back cover.

The BSI copyright notice displayed in this document indicates when the document was last issued.

Amendments issued since publication

Kaltgefertigte geschweißte Hohlprofile für den Stahlbau aus unlegierten Baustählen und aus Feinkornbaustählen - Teil 2: Grenzabmaße, Maße und statische Werte

This European Standard was approved by CEN on 16 March 2006.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This European Standard (EN 10219-2:2006) has been prepared by Technical Committee ECISS/TC 10 “Structural steels - Grades and qualities”, the secretariat of which is held by NEN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by October 2006, and conflicting national standards shall be withdrawn at the latest by October 2006.

This European Standard supersedes EN 10219—2:1997.

This standard consists of the following parts under the general title 'Cold formed welded structural hollow sections of non-alloy and fine grain steels':

- Part 1: Technical delivery conditions
- Part 2: Tolerances, dimensions and sectional properties

It forms part of a series of standards on hollow sections together with EN 10210-1 and 2, which are also under revision.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

1 Scope

This part of EN 10219 specifies tolerances for cold formed welded circular, square and rectangular structural hollow sections, manufactured in wall thicknesses up to 40 mm, in the following size ranges:

Circular: Outside diameters up to 2 500 mm

Square: Outside dimensions up to 500 mm x 500 mm

Rectangular: Outside dimensions up to 500 mm x 300 mm

The formulae for calculating sectional properties of sections manufactured to the dimensional tolerances of this standard, to be used for the purposes of structural design, are given in Annex B.

Dimensions and sectional properties for a limited range of sizes are given in Annex C.

Technical delivery conditions are specified in EN 10219-1.

NOTE The designation of the sections' major axis (yy) and its minor axis (zz) align with the axis designation used for structural design in the structural Eurocodes.

2 Normative references

The following referenced documents are indispensable for the application of this European Standard. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 10219-1:2006, *Cold formed welded structural hollow sections of non-alloy and fine grain steels — Part 1: Technical delivery conditions*

3 Terms and definitions

For the purposes of this European Standard, the terms and definitions given in EN 10219-1:2006 apply.

4 Symbols

For the purposes of this European Standard, the symbols defined in Table 1 apply.

Table 1 — Symbols and definitions

Symbol	Unit	Definition
A	cm ²	Cross-sectional area
A_s	m ² /m	Superficial area per metre length
B	mm	Specified side dimension of a square hollow section. Specified dimension of the shorter side of a rectangular hollow section
C_1/C_2	mm	Length of corner region of a square or rectangular hollow section
C_t	cm ³	Torsional modulus constant
D	mm	Specified outside diameter of a circular hollow section
D_{max}/D_{min}	mm	The maximum and minimum outside diameter of a circular hollow section measured in the same plane
e	mm	Deviation from straightness
H	mm	Specified dimension of the longer side of a rectangular hollow section
I	cm ⁴	Second moment of area
I_t	cm ⁴	Torsional inertia constant (polar moment of inertia in the case of circular hollow sections only)
i	cm	Radius of gyration
L	mm	Length
M	kg/m	Mass per unit length
O	%	Out-of-roundness
R	mm	External corner radius of a square or rectangular hollow section
T	mm	Specified thickness
V	mm	Total measured twist
V_1	mm	Twist measured at one end of a section
W_{el}	cm ³	Elastic section modulus
W_{pl}	cm ³	Plastic section modulus
x_1	mm	Concavity of a side of a square or rectangular hollow section
x_2	mm	Convexity of a side of a square or rectangular hollow section
yy	—	Axis of cross-section, major axis of a rectangular hollow section
zz	—	Axis of cross-section, minor axis of a rectangular hollow section
θ	°	Angle between adjacent sides of a square or rectangular hollow section

5 Information to be obtained by the manufacturer

The following mandatory information from this part of EN 10219 shall be obtained by the manufacturer at the time of enquiry and order.

- a) The type of length, length range or length (see Table 4).
- b) The dimensions (see Clause 8).

NOTE This information is included in the list of information to be obtained by the manufacturer contained in EN 10219-1.

6 Tolerances

6.1 Tolerances shall not exceed the values given in Table 2 for shape and mass, Table 3 for external corner profiles, Table 4 for manufacturer's delivered length and Table 5 for the height of the internal and external weld bead of submerged arc welded hollow sections.

6.2 The internal corners of square and rectangular hollow sections shall be rounded.

NOTE The internal corner profile is not specified.

6.3 Additional tolerances for out-of-roundness, accidental eccentricity and dimples may be applied to tubes of diameter ≥ 900 mm and $D/T \geq 50$ when they are to be used as bearing piles or primary elements in combined walls in accordance with ENV 1993-5. In order for these additional tolerances to be applied the fabrication tolerance quality class, A, B, or C should be agreed. See Annex A.

Table 2 — Tolerances on shape and mass

Characteristic	Circular hollow sections	Square and rectangular hollow sections	
		Side length mm	Tolerance
Outside dimensions (D , B and H)	$\pm 1\%$ with a minimum of $\pm 0,5$ mm and a maximum of ± 10 mm		
		$H, B < 100$	$\pm 1\%$ with a minimum of $\pm 0,5$ mm
		$100 \leq H, B \leq 200$	$\pm 0,8\%$
		$H, B > 200$	$\pm 0,6\%$
Thickness (T)	For $D \leq 406,4$ mm: $T \leq 5$ mm $\pm 10\%$ $T > 5$ mm $\pm 0,5$ mm For $D > 406,4$ mm: $\pm 10\%$ with a maximum of ± 2 mm	$T \leq 5$ mm $\pm 10\%$ $T > 5$ mm $\pm 0,5$ mm	
Out-of-roundness (O)	2 % for hollow sections having a diameter to thickness ratio not exceeding 100 ^a	—	
Concavity/convexity (x_1, x_2) ^b	—	Max. 0,8 % with a minimum of 0,5 mm	
Squareness of side (θ)	—	$90^\circ \pm 1^\circ$	
External corner profile (C_1, C_2 or R)	—	See Table 3	
Twist (V)	—	2 mm plus 0,5 mm/m length	
Straightness (e)	0,20 % of total length and 3 mm over any 1 m length	0,15 % of total length and 3 mm over any 1 m length	
Mass per unit length (M)	$\pm 6\%$ on individual delivered lengths		
<p>^a Where the diameter to thickness ratio exceeds 100 the tolerance on out-of-roundness shall be agreed.</p> <p>^b The tolerance on convexity and concavity is independent of the tolerance on outside dimensions.</p>			

Table 3 — Tolerances on external corner profiles

Dimensions in millimetres

Thickness T	External corner profile C_1, C_2 or R^a
$T \leq 6$	1,6 T to 2,4 T
$6 < T \leq 10$	2,0 T to 3,0 T
$10 < T$	2,4 T to 3,6 T
^a The sides need not be tangential to the corner arcs.	

Table 4 — Tolerances on manufacturer's delivered length

Dimensions in millimetres

Type of length ^a	Range of length or length L	Tolerance
Random length	4 000 < L ≤ 16 000 with a range of 2 000 per order item	10 % of sections supplied may be below the minimum for the ordered range but not shorter than 75 % of the minimum range length
Approximate length	≥ 4 000	$^{+50}_0$ mm
Exact length ^b	<6 000	$^{+5}_0$ mm
	6 000 ≤ L ≤ 10 000	$^{+15}_0$ mm
	>10 000	$^{+5}_0$ mm +1 mm/m
^a The manufacturer shall establish at the time of enquiry and order the type of length required and the length range or length.		
^b Common lengths available are 6 m and 12 m.		

Table 5 — Tolerance on height of internal and external weld bead for submerged arc welded hollow sections

Dimensions in millimetres

Thickness, T	Maximum weld bead height
$\leq 14,2$	3,5
$> 14,2$	4,8

7 Measurement of size and shape

7.1 General

All external dimensions, including out-of-roundness, shall be measured at a distance from the end of the hollow section of not less than D for circular sections, B for square sections or H for rectangular sections, with a minimum of 100 mm.

7.2 Outside dimensions

For circular hollow sections the diameter (D) shall be measured either directly, e.g. using a calliper gauge, or by circumference tape at the discretion of the manufacturer.

The limiting cross-sectional positions for measuring B and H for square and rectangular hollow sections are shown in Figure 1.

7.3 Thickness

The thickness (T) shall be measured at a position not less than $2T$ from the weld.

The limiting cross-sectional positions for measuring the thickness of square and rectangular hollow sections are shown in Figure 1.

NOTE Thickness is normally measured within a distance of half the outside diameter or half the dimension of the longer side from the end of the section.

Dimensions in millimetres

^a This dimension is a maximum when measuring B or H and a minimum when measuring T .

Figure 1 — Limiting cross-sectional positions for measuring the dimensions B , H and T for square or rectangular hollow sections

7.4 Out-of-roundness

The out-of-roundness (O) of a circular hollow section shall be calculated from the following equation, but see Annex A for piling tube.

$$O(\%) = \frac{D_{\max} - D_{\min}}{D} \times 100$$

7.5 Concavity and convexity

The concavity (x_1) or the convexity (x_2) of the sides of a square or rectangular hollow section shall be measured as shown in Figure 2.

The percentage concavity or convexity shall be calculated as follows:

$$\frac{x_1}{B} \times 100\%; \frac{x_2}{B} \times 100\%; \frac{x_1}{H} \times 100\%; \frac{x_2}{H} \times 100\%$$

where B and H are the dimensions of the sides containing the concavity x_1 or the convexity x_2 .

Figure 2 — Measurement of concavity/convexity of square or rectangular hollow sections

7.6 Squareness of sides

The deviation from squareness of the sides of a square or rectangular hollow section shall be measured as the difference between 90° and θ as shown in Figure 3.

Figure 3 — Squareness of sides of square or rectangular hollow sections

7.7 External corner profile

7.7.1 The external corner profile of a square or rectangular hollow section shall be measured according to 7.7.2 or 7.7.3 at the discretion of the manufacturer.

7.7.2 The corner arc shall be measured with a radius gauge.

7.7.3 The distance between the intersection of the flat side and the corner arc and the intersection of the projections of the flat sides to the corner (C_1 and C_2 in Figure 4) shall be measured.

Figure 4 — Outside corner profile of square or rectangular hollow sections

7.8 Twist

7.8.1 The twist (V) in a square or rectangular hollow section shall be determined in accordance with 7.8.2 or 7.8.3 at the discretion of the manufacturer.

7.8.2 The hollow section shall be placed on a horizontal surface with one side at one end pressed flat against the surface. At the opposite end of the hollow section the difference in height of the two lower corners from the horizontal surface (see Figure 5) shall be determined.

Figure 5 — Twist of square or rectangular hollow sections

7.8.3 The twist shall be measured with a spirit level and micrometer gauge (screw). The reference length of the spirit level shall be the distance between the intersection of the flat sides and the corner arcs (see Figure 6). The twist V is the difference between the values V_1 (see Figure 6) measured at each end of the hollow section.

Key

- 1 Spirit level
- 2 H for rectangular sections, B for square sections

Figure 6 — Measurement of twist

7.9 Straightness

The deviation from straightness (e) of the total length of a hollow section shall be measured at the point of maximum departure of the hollow section from a straight line connecting its two ends, as shown in Figure 7 where L is the manufacturer's delivered length. The percentage deviation from straightness shall be calculated as follows:

$$\frac{e}{L} \times 100\%$$

In addition the local deviation (e) from straightness of a hollow section, measured at any point along its length from a straight line length L of 1 m, shall be not more than 3 mm.

Figure 7 — Measurement of deviation from straightness

8 Dimensions and sectional properties

The nominal sectional properties of hollow sections within the scope of this part of EN 10219 and manufactured to the dimensional tolerances of this standard, required for the purposes of structural design, shall be calculated in accordance with Annex B.

The sectional properties for a limited range of standard sizes of cold formed hollow sections are given in Table C.1 for circular sections, Table C.2 for square sections and Table C.3 for rectangular sections. These sectional properties were calculated from the formulae given in Annex B.

NOTE Not all sizes and thicknesses shown in Tables C.1, C.2 and C.3 are available from all manufacturers and the user is recommended to check availability. Other sizes and thicknesses within the scope of this standard may be available.

Annex A (informative)

Additional tolerances for piling tube

A.1 General

This annex contains guidance on additional tolerances that can be applied to tubes when they are to be used as bearing piles or primary elements in combined walls in accordance with ENV 1993-5. These requirements are generally relevant to tubes of diameter ≥ 900 mm and $D/T \geq 100$.

For verification of tubular piles subject to shell buckling, ENV 1993-5: Piling refers to ENV 1993-1-6. Shell buckling is partly governed by geometrical imperfections of the shell due to out-of-roundness, accidental eccentricity and dimples. ENV 1993-1-6 specifies limits for each of these geometrical imperfections, based on the concept of fabrication quality classes. Details of how to assess out-of-roundness, accidental eccentricity and dimples, and the recommended maximum permitted values for each fabrication quality class, are given in A.2, A.3 and A.4.

NOTE 1 See ENV 1993-1-6 for further details of fabrication tolerance quality classes, their design implications and for definitions and use of symbols.

NOTE 2 The values of certain parameters, given in Tables A.1, A.2 and A.3 may be subject to change by national application of ENV 1993-1-6. Nationally determined parameters will be given in the relevant National Annex of ENV 1993-1-6.

A.2 Out of roundness tolerance

Out-of-roundness of a tubular pile is assessed in terms of the parameter U_r , the difference between the maximum and minimum values of the measured internal diameter, relative to the nominal inside diameter, see Figure A.1, given by:

$$U_r = \frac{d_{\max} - d_{\min}}{d_{\text{nom}}}$$

Where:

- d_{\max} is the maximum measured internal diameter;
- d_{\min} is the minimum measured internal diameter;
- d_{nom} is the nominal inside diameter ($d = D - 2T$, see B.2).

An appropriate number of diameters should be measured in order to identify the maximum and minimum values.

Figure A.1 — Assessment of d_{\min} and d_{\max} and relationship to d

The out-of-roundness parameter U_r should satisfy the condition:

$$U_r \leq U_{r, \max}$$

where:

$U_{r, \max}$ is the maximum permitted value for the out-of-roundness parameter.

Recommended values for each fabrication tolerance quality class are given in Table A.1.

Table A.1 — Maximum permitted values for out-of-roundness parameter $U_{r, \max}$

Dimensions in mm

Fabrication tolerance quality class	Description	Diameter range		
		$d \leq 500$	$500 < d < 1250$	$1250 \leq d$
		Value of $U_r \max^a$		
Class A	Excellent	0,14	$0,007 + 0,0093 (1,25 - d)$	0,007
Class B	High	0,02	$0,010 + 0,0133 (1,25 - d)$	0,01
Class C	Normal	0,03	$0,015 + 0,020 (1,25 - d)$	0,015

^a The values of this parameter may be subject to change by national application of ENV 1993-1-6. If in doubt, reference should be made to the relevant National Annex of ENV 1993-1-6.

A.3 Accidental eccentricity tolerance

Accidental eccentricity, the unintentional eccentricity due to misalignment of the tube walls at horizontal joints, is assessed in terms of the parameter U_e given by:

$$U_e = \frac{e_a}{T}$$

where:

- e_a is the accidental eccentricity between the mid points of the tube walls at the joint, compared to their normal thickness;
- T is the tube wall thickness.

NOTE For joints involving tubes of different thicknesses, it is recommended to refer to ENV 1993-1-6.

Figure A.2 — Measurement of tube wall eccentricity (e_a)

The accidental eccentricity e_a should satisfy the condition:

$$e_a \leq e_{a, \max}$$

where:

$e_{a, \max}$ is the maximum permitted accidental eccentricity.

Recommended values for each fabrication tolerance quality class are given in Table A.2.

The accidental eccentricity parameter U_e should satisfy the condition:

$$U_e \leq U_{e, \max}$$

where:

$U_{e, \max}$ is the maximum permitted value for the accidental eccentricity parameter.

Recommended values for each fabrication tolerance quality class are given in Table A.2.

Table A.2 — Maximum permitted values for accidental eccentricity parameter $U_{e, \max}$ and for accidental eccentricity $e_{a, \max}$

Dimensions in mm

Fabrication tolerance quality class	Description	$U_{e, \max}^a$	$e_{a, \max}^a$
Class A	Excellent	0,14	2
Class B	High	0,2	3
Class C	Normal	0,3	4
^a The values of these parameters may be subject to change by national application of ENV 1993-1-6. If in doubt, reference should be made to the relevant National Annex of ENV 1993-1-6.			

A.4 Dimple tolerance

The depth of initial dimples in the tube wall w_0 is measured, in both the meridional and circumferential directions, using a measurement gauge, see Figure A.3, of length l_g where:

- a) meridionally and circumferentially $l_g = 4\sqrt{rT}$
- b) across welds $l_g = 25 T$ but $l_g \leq 500$ mm

The gauge used for meridional measurements should be straight but that used for measurements in the circumferential direction should have a radius of curvature r where:

$$r = \frac{(D-T)}{2}$$

NOTE For joints involving tubes of different thicknesses, it is recommended to refer to ENV 1993-1-6.

Figure A.3 — Measurement of depth w_o of initial dimples

The level of initial dimples in the wall of the tubular pile is assessed in terms of the dimple tolerance parameter U_d given by:

$$U_d = \frac{w_o}{l_g}$$

The dimple tolerance parameter U_d should satisfy the condition:

$$U_d \leq U_{d, \max}$$

where:

$U_{d, \max}$ is the maximum permitted value for the dimple tolerance parameter.

Recommended values for each fabrication tolerance class are given in Table A.3.

Table A.3 — Maximum permitted values for dimple tolerance parameter $U_{d, \max}$
Dimensions in mm

Fabrication tolerance quality class	Description	$U_{d, \max}$
Class A	Excellent	0,006
Class B	High	0,01
Class C	Normal	0,016

^a The values of this parameter may be subject to change by national application of ENV 1993-1-6. If in doubt, reference should be made to the National Annex of ENV 1993-1-6.

Annex B (normative)

Formulae for the calculation of sectional properties

B.1 General

Tables C.1, C.2 and C.3 of this standard give nominal sectional properties for a limited range of sizes of cold formed hollow sections. The nominal sectional properties of hollow sections supplied to the requirements of this standard shall be calculated using the formulae given below.

NOTE The designation of the sections' major axis (yy) and its minor axis (zz) align with the axis designation used for structural design in the structural Eurocodes. This is a change from previous axis designations.

B.2 Circular hollow sections

The sectional properties for circular hollow sections in Table C.1 are calculated using the formulae given below.

Specified outside diameter	(D)	(mm)
Specified thickness	(T)	(mm)
Inside diameter	$(d = D - 2T)$	(mm)

These parameters, which characterize the shape of circular hollow sections, may vary within the tolerances allowed by this standard and the sectional properties still remain valid.

Superficial area per metre length	$A_s = \frac{\pi D}{10^3}$	(m ² /m)
Cross-sectional area	$A = \frac{\pi(D^2 - d^2)}{4 \times 10^2}$	(cm ²)
Mass per unit length	$M = 0,785 \times A$	(kg/m)
Second moment of area	$I = \frac{\pi(D^4 - d^4)}{64 \times 10^4}$	(cm ⁴)
Radius of gyration	$i = \sqrt{\frac{I}{A}}$	(cm)

Elastic section modulus	$W_{el} = \frac{2I \times 10}{D}$	(cm ³)
Plastic section modulus	$W_{pl} = \frac{D^3 - d^3}{6 \times 10^3}$	(cm ³)
Torsional inertia constant (polar moment of inertia)	$I_t = 2I$	(cm ⁴)
Torsional modulus constant	$C_t = 2W_{el}$	(cm ³)

B.3 Rectangular, or square, hollow sections

The sectional properties for square hollow sections in Table C.2 and for rectangular hollow sections in Table C.3 are calculated using the formulae given below.

Specified side dimension of a square hollow section or shorter side of a rectangular hollow section (B) (mm)

Specified dimension of the longer side of a rectangular hollow section (H) (mm)

Specified thickness (T) (mm)

External corner radius (r_o) for calculation is:

for thicknesses ≤ 6 mm 2,0 T (mm)

for thicknesses > 6 mm ≤ 10 mm 2,5 T (mm)

for thicknesses > 10 mm 3,0 T (mm)

Internal corner radius (r_i) for calculation is:

for thicknesses ≤ 6 mm 1,0 T (mm)

for thicknesses > 6 mm and ≤ 10 mm 1,5 T (mm)

for thicknesses > 10 mm 2,0 T (mm)

These parameters, which characterize the geometric shape of rectangular, or square, hollow sections, may vary within the tolerances allowed by this standard and the sectional properties still remain valid.

Superficial area per metre length $A_s = \frac{2}{10^3} (H + B - 4r_o + \pi r_o)$ (m²/m)

Cross-sectional area

$$A = \frac{2T(B + H - 2T) - (4 - \pi)(r_o^2 - r_i^2)}{10^2} \quad (\text{cm}^2)$$

Mass per unit length

$$M = 0,785A \quad (\text{kg/m})$$

Second moment of area

Major axis

$$I_{yy} = \frac{1}{10^4} \left[\frac{BH^3}{12} - \frac{(B-2T)(H-2T)^3}{12} - 4(I_g + A_g h_g^2) + 4(I_{\xi\xi} + A_\xi h_\xi^2) \right] \quad (\text{cm}^4)$$

Minor axis

$$I_{zz} = \frac{1}{10^4} \left[\frac{HB^3}{12} - \frac{(H-2T)(B-2T)^3}{12} - 4(I_g + A_g h_g^2) + 4(I_{\xi\xi} + A_\xi h_\xi^2) \right] \quad (\text{cm}^4)$$

Radius of gyration

Major axis

$$i_{yy} = \sqrt{\frac{I_{yy}}{A}} \quad (\text{cm})$$

Minor axis

$$i_{zz} = \sqrt{\frac{I_{zz}}{A}} \quad (\text{cm})$$

Elastic section modulus

Major axis

$$W_{el yy} = \frac{2I_{yy}}{H} \times 10 \quad (\text{cm}^3)$$

Minor axis

$$W_{el zz} = \frac{2I_{zz}}{B} \times 10 \quad (\text{cm}^3)$$

Plastic section modulus

Major axis

$$W_{pl yy} = \frac{1}{10^3} \left[\frac{BH^2}{4} - \frac{(B-2T)(H-2T)^2}{4} - 4(A_g h_g) + 4(A_\xi h_\xi) \right] \quad (\text{cm}^3)$$

Minor axis

$$W_{pl zz} = \frac{1}{10^3} \left[\frac{HB^2}{4} - \frac{(H-2T)(B-2T)^2}{4} - 4(A_g h_g) + 4(A_\xi h_\xi) \right] \quad (\text{cm}^3)$$

Torsional inertia constant $I_t = \frac{1}{10^4} \left[T^3 \frac{h}{3} + 2KA_h \right]$ (cm⁴)

Torsional modulus constant $C_t = 10 \left[\frac{I_t}{T + K/T} \right]$ (cm³)

Where $A_g = \left(1 - \frac{\pi}{4} \right) r_o^2$ (mm²)

$$A_\xi = \left(1 - \frac{\pi}{4} \right) r_i^2 \quad (\text{mm}^2)$$

Major axis $h_g = \frac{H}{2} - \left(\frac{10 - 3\pi}{12 - 3\pi} \right) r_o$ (mm)

(For minor axis substitute B for H .)

Major axis $h_\xi = \frac{H - 2T}{2} - \left(\frac{10 - 3\pi}{12 - 3\pi} \right) r_i$ (mm)

(For minor axis substitute B for H .)

$$I_g = \left(\frac{1}{3} - \frac{\pi}{16} - \frac{1}{3(12 - 3\pi)} \right) r_o^4 \quad (\text{mm}^4)$$

$$I_{\xi\xi} = \left(\frac{1}{3} - \frac{\pi}{16} - \frac{1}{3(12 - 3\pi)} \right) r_i^4 \quad (\text{mm}^4)$$

$$h = 2[(B - T) + (H - T)] - 2R_c(4 - \pi) \quad (\text{mm})$$

$$A_h = (B - T)(H - T) - R_c^2(4 - \pi) \quad (\text{mm})$$

$$K = \frac{2A_h T}{h} \quad (\text{mm}^2)$$

$$R_c = \frac{r_o + r_i}{2} \quad (\text{mm})$$

Annex C (normative)

Sectional properties for a limited range of standard sizes

Table C.1 — Nominal dimensions and sectional properties of a limited range of circular hollow sections (see Figure C.1)
