Safety light curtain

Safety light curtain/Safety laser scanner/safety mat/safety edge/safety relay/Photoelectric switch

Model-CLT-CMT High-precision measurement and detection light curtain

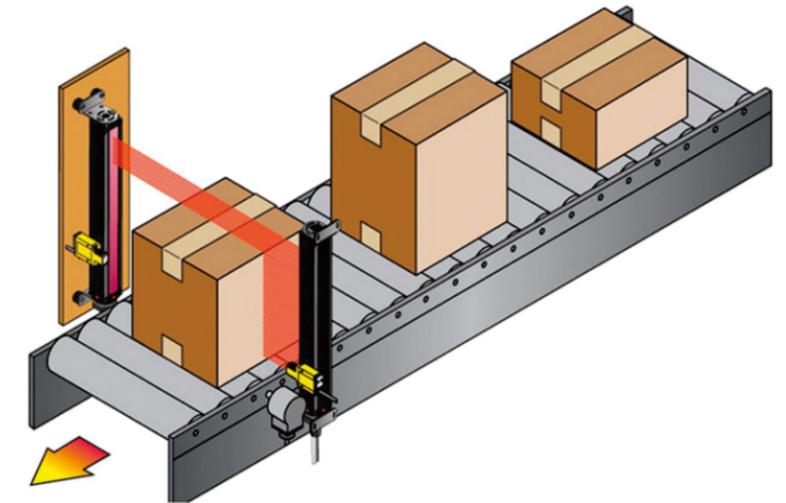

- Ultra-fast response speed (up to 5ms)
- 2.5mm high precision measurement and detection
- RS485/232/analog multiple output
- Can effectively shield 99% of interference signals

It is widely used in complex online detection and measurement such as size measurement, volume measurement, precision correction, hole detection, center positioning, and part counting.

◆ CLT Photoelectric protection device

- ★ High precision CLT series measuring light curtain is suitable for high precision detection and measurement. It includes on-line detection, size measurement, contour detection, accuracy correction, hole detection, shape detection, edge and center positioning, tension control, part counting, on-line product size detection and similar detection and measurement.
- ★ Each system consists of a high-resolution transmitter and receiver, and two cables.
- ★ Perfect self-check function: When the safety screen protector fails, ensure that the wrong signal is not sent to the controlled electrical appliances.
- ★ Strong anti-interference ability: The system has good anti-interference ability to electromagnetic signal, stroboscopic light, welding arc and surrounding light source;
- ★ Easy installation and debugging, simple wiring, beautiful appearance;
- ★ Surface mounting technology is adopted, which has superior seismic performance.
- ★ It conforms to IEC61496-1/2 standard safety grade and TUV CE certification.
- ★ The corresponding time is short ($\leq 15\text{ms}$), and the safety and reliability performance is high.
- ★ The dimension design is 36mm*36mm.
The safety sensor can be connected to the cable (M12) through the air socket.
- ★ All electronic components adopt world-renowned brand accessories.

◆ Product configuration

The controller, the light emitter, the light receiver and the transmission line are composed.

7-core data line

Aviation interface

Distance 1.25, 2.5, 5mm shape circle

Distance 10mm shape circle

Distance 10mm shape circle

◆ 产品技术参数 Technical parameters of products

Light curtain form	Counter shooting					
Beam pitch	1.25mm	2.5mm	5mm	10mm	20mm	40mm
Check the accuracy	2mm	3.75mm	6.5mm	15mm	25mm	45mm
Beam number	64\96...480	32\48...480	16\24...480	8\10...480	4\6...480	4\6...480
Height of protection	Beam pitch X (Beam number-1)					
Detection distance	30 ~ 3000mm 、 30~6000mm 、 30~10000mm					
Response time	≤15ms					
Anti light interference	10000Lux(Incidence angle ≥5°)					
Outline size	36x36xLmm(L is the length of light emitter/receiver)					
Protection level	IP65					
Supply voltage	DC12/24V					
Output	RS485/RS232 I:4-20mA U:1-10V					
Output state	ON (Receiving Display Green Light) Digital Tube Display 00 when all optical axes are illuminated					
Indicator light	Projector: Power indicator (red); Receiver: Output indicator (green) shading (red)					
Light source	Modulated Infrared LED					
Connection mode	Waterproof circular air socket with special connecting cable, 7/5 core of projector and 7/5 core of receiver					
Shell material	Aluminum alloy, end cover: ABS reinforced nylon					
Environmental light resistance	Incandescent light illumination of the receiving surface 3000Lx; sunlight illumination of the receiving surface 10000Lx					
Ambient temperature	When working: - 10 ~ + 40 C (but not freezing), when preserved: - 25 ~ + 55 C					
Ambient humidity	Work: 35-85% RH, save: 35-95% RH					

Introduction to the Application of Measuring and Detecting Light Curtain

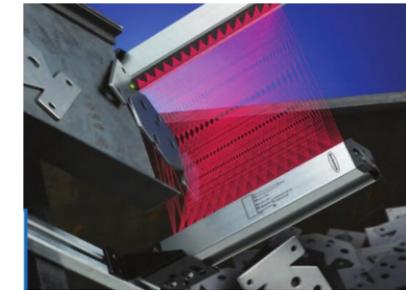

Size measurement of cardboard boxes:

It can measure the length, width and height of the object, and send the data to the background program to calculate the volume synthesis operation of the object.

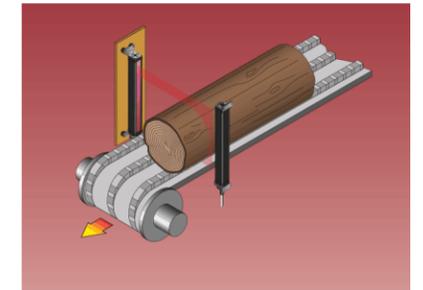

Counting of Falling Flat Small Objects:

Unique facula synchronous multi-beam infrared LED for high-precision detection generates accurate cross-spot of light, and has the detection function of extremely small objects.

Tyre classification:

Two sets of light curtains are used to measure the inner and outer diameters of the tires, and the tires are conveyed to the corresponding conveyor belt. If either of the dimensions of the tires does not conform to the specifications, they will be packed without air.

Wood cutting:

Measure the length of the board and check whether it is deformed or not. Boards that exceed specifications will be removed. At the same time, the length of the board can be measured to determine whether the board is bent or not, because the deformation of the kite will cause the length of the board to change.

Tyre classification:

Two sets of light curtains are used to measure the inner and outer diameters of the tires, and the tires are conveyed to the corresponding conveyor belt. If either of the dimensions of the tires does not conform to the specifications, they will be packed without air.

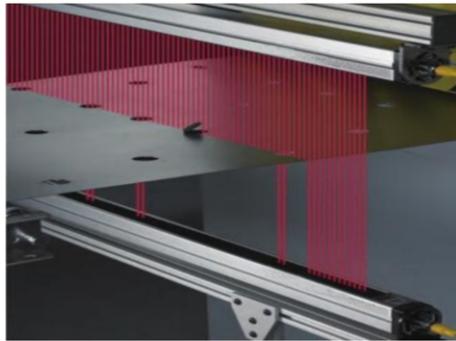

Counting of Small Objects:

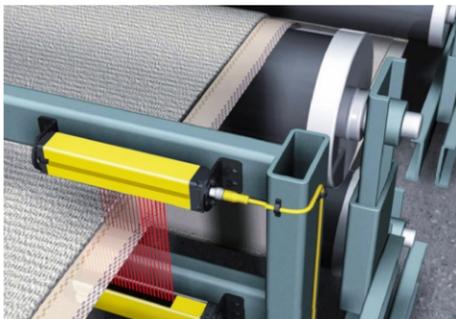

In the production process, the small screw is conveyed from the feeding barrel and falls into the plastic bag. The light screen counts the dropping small screws and monitors the number of packages per bag. The transmitter of the receiver consists of a 5 millisecond pulse stretcher (turn-off delay) to improve the counting accuracy.

Punching test:
Detection of the absence of punches on metal sheets or the location of coil cutting or the presence of holes in sheets.

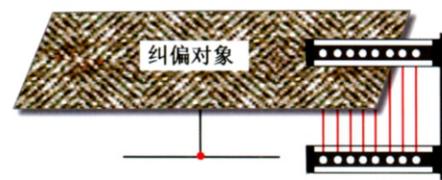

Cloth blanket detection:
When the blanket passes through the measuring light curtain, the light curtain detects the edge of the blanket green and the edge of the fabric cluster and sends out signals to the control system for position correction.

Indicator lamp with hint for assembly and production of parts:
Guide assembly workers to pick up parts correctly to prevent missing parts and parts assembly sequence errors.

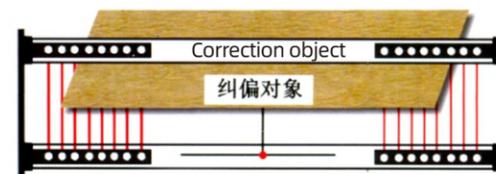

Correction of deviation in carton packaging industry

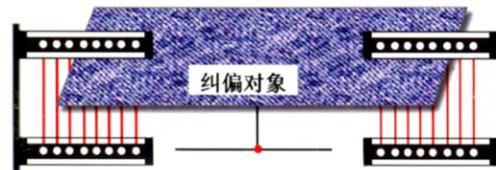

Single set of opposite-side rectifying curtain

Single set of opposite-side rectifying light curtain (including protective tube)

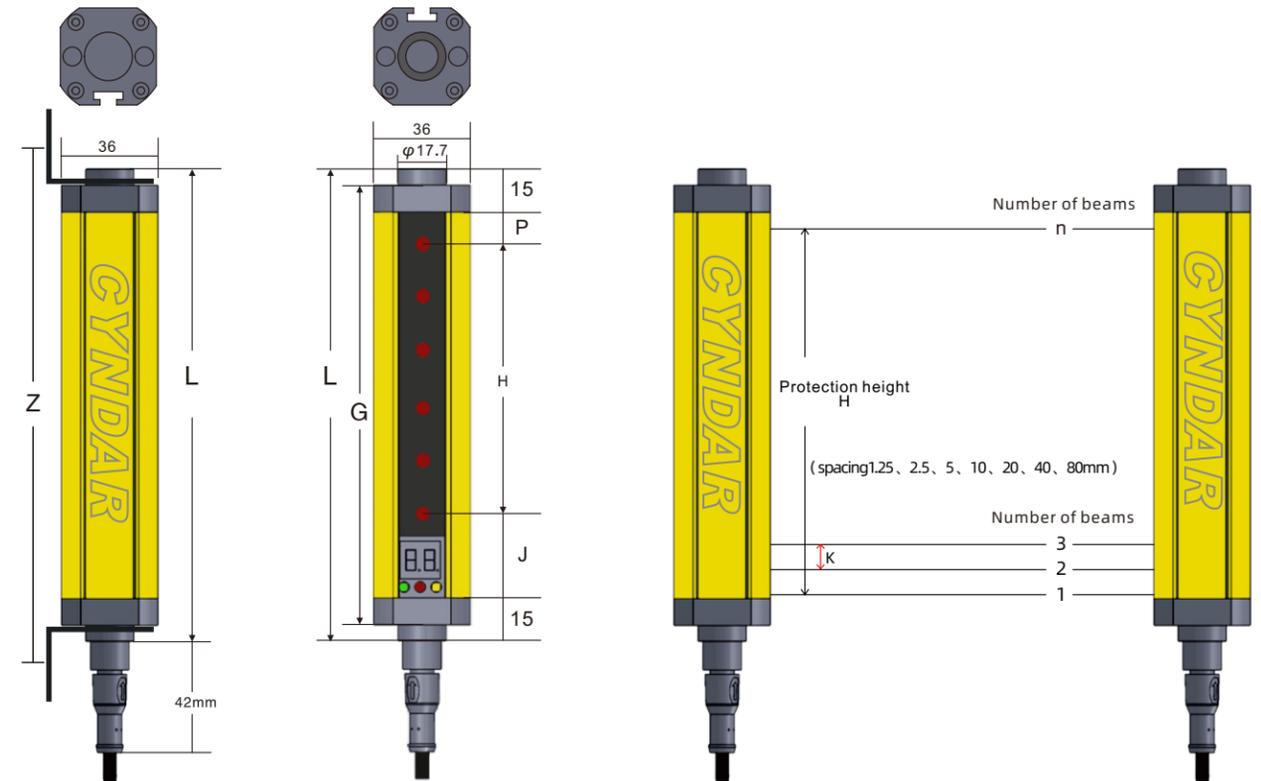

Bilateral polarization correction curtain (with protective tube)

Bilateral polarization correction curtain (two sets of combination)

◆ Dimensions

Remarks

$$H = (n - 1) * K =$$

Detection height

L: Total length of light screen

n: Optical axis number

$$Z = L + 30mm =$$

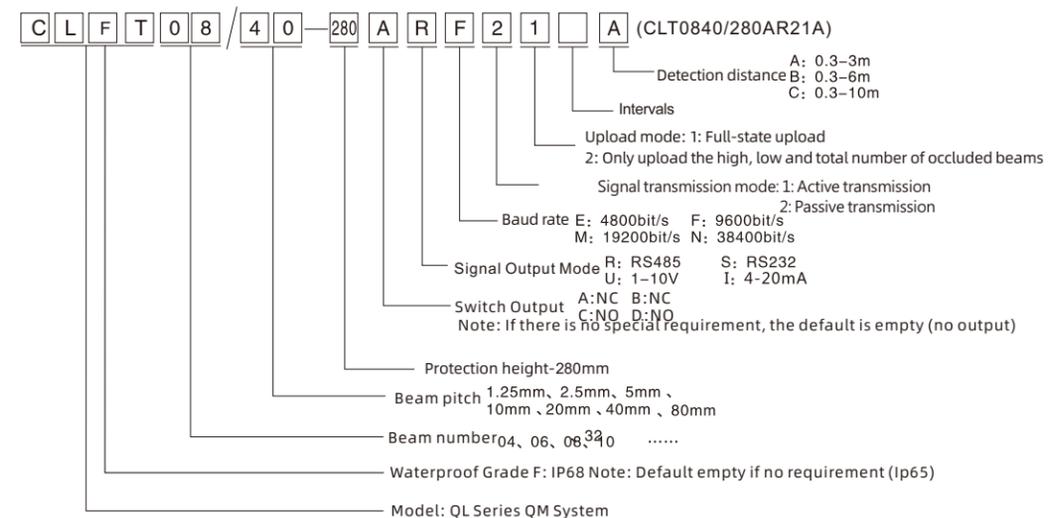

Center Distance of Fixed Mode of Upper and Lower Right Angle Frames

Optical axis spacing

$$L = P + H + J + 15mm + 15mm$$

K (mm)	2.5	5	10	20	40	80
P (mm)	1.25	2.5	5	10	10	10
J (mm)	25.75	27	29.5	34.5	34.5	35

◆ CLT ultra-thin safety light curtain specification sheet is as follows

QL08/40-280 A RA21A: Measure the protective height of 40mm spacing of 8 beams of light curtain 280 mm NPN NC Rs485 output baud rate 9600 bit/s passive transmission mode full-state upload detection distance of 3 meters. Detailed models can be found on the next page.

Note: The number of beams exceeding the above specifications can be indicated separately. Special specifications can be customized separately. The distance between 20 and 40 mm is more than 4 meters. Please explain in advance.

◆ Frame format

- Reference to Modbus RTU protocol customization, using RS485 communication;
- Baud rate 4800 bit / s, 9600 bit / s, 19200 BOT / s, 38400 bit / s, default 9600 bit / s;
- Data 8 bit; no parity check; 1 bit stop bit; 16 bit CRC check.

◆ Active transmission mode of RS485/232 signal

Active access: By default, data is automatically uploaded to the host computer every 100 ms (speed and time can be set).

◆ Passive transmission mode of RS485/232 signal

Passive access mode: multiple sets of light curtains are connected in parallel at the same time, and the upper computer sends instructions before uploading data. The address code can be modified arbitrarily.

◆ RS485/232 Communication Protocol (Mode 1)

The communication mode uploads the status of all light points directly to the upper computer, which processes data directly according to the requirements of use.

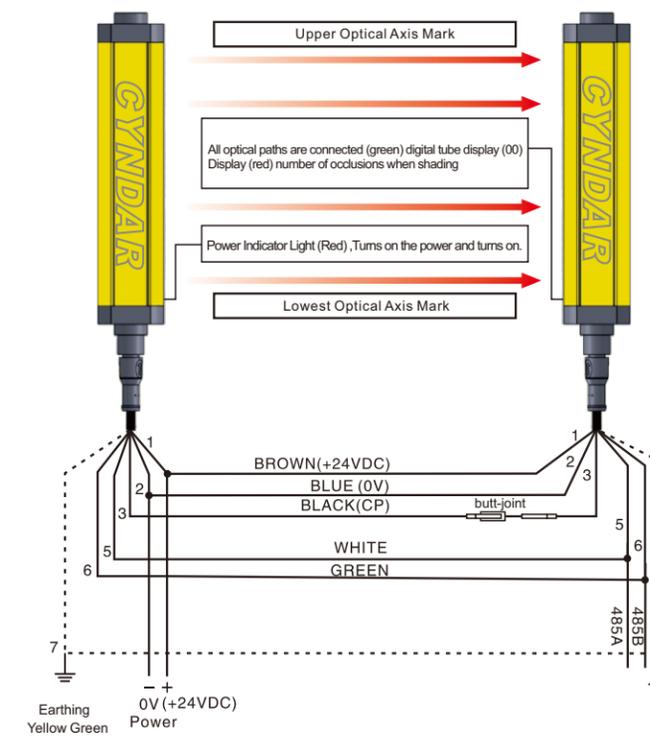

Free	0	1	2	3	---	N	N+1	N+2	Free
Starting position $\geq 10ms$	0x03H	Total spot count	Single frame data volume	Data 1	---	Data N	CRC Check High Bytes	CRC Check Low Bytes	Stop bit $\geq 10ms$

◆ RS485/232 Communication Protocol (Mode 2)

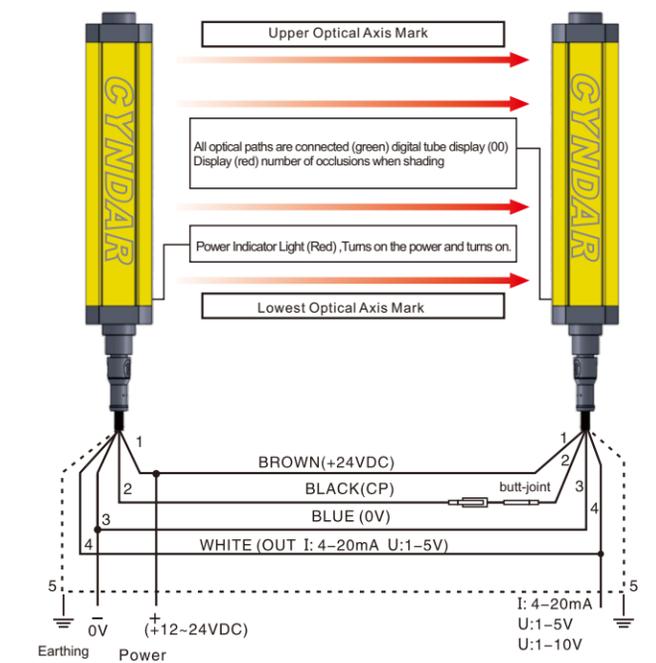

The communication mode only uploads the data of the highest point, the lowest point and the total number of photovoltaic shielded to the upper computer directly, and the upper computer processes the data directly according to the use requirements.

Free	First place	Second place	Third place	Fourth place	Fifth place	Sixth place	Seventh place	Free
Starting position $\geq 10ms$	0x03 Start code	Total spot count	0x07 Single frame data volume	The highest point of light screen occlusion	The lowest point of light screen occlusion	Total number of light screens	Check code	Stop bit $\geq 10ms$

◆ CLT 7-core RS485/RS232 series wiring diagram

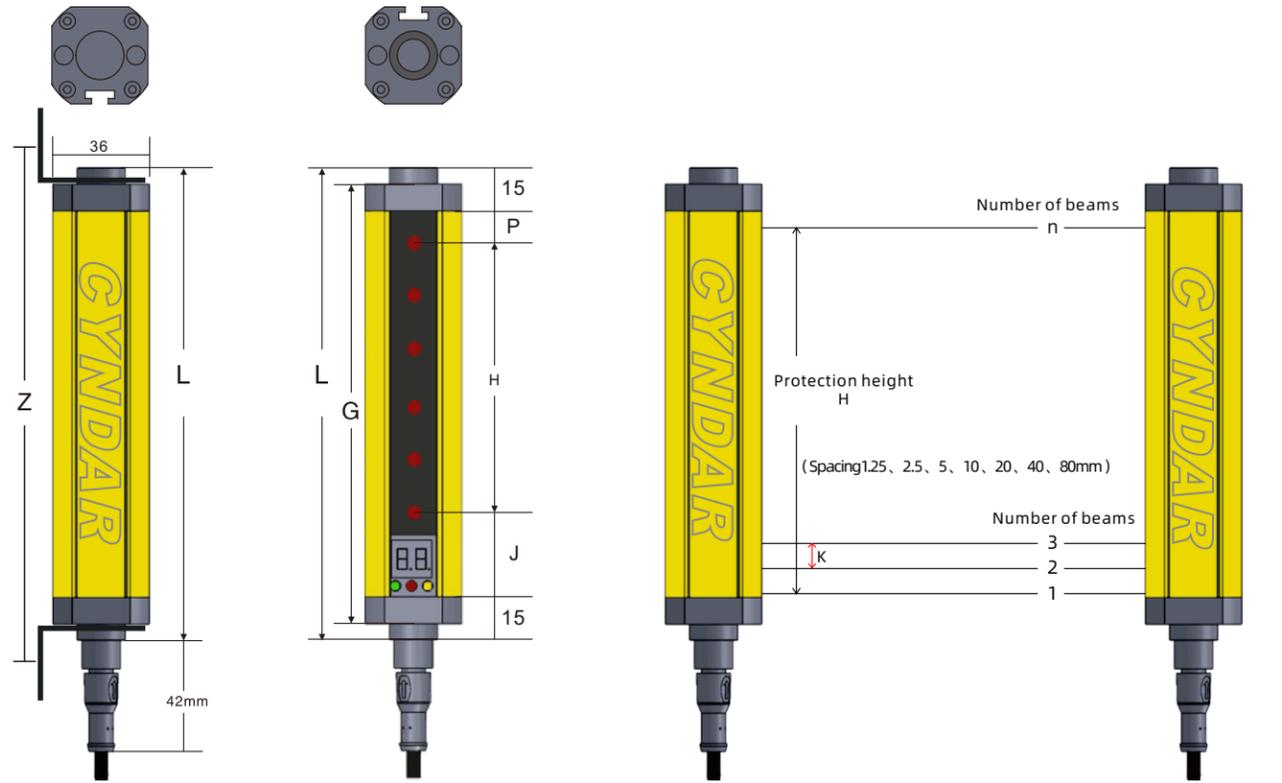

◆ CLT 5-core analog U/I series wiring diagram

You can attach a set of NPN or PNP outputs

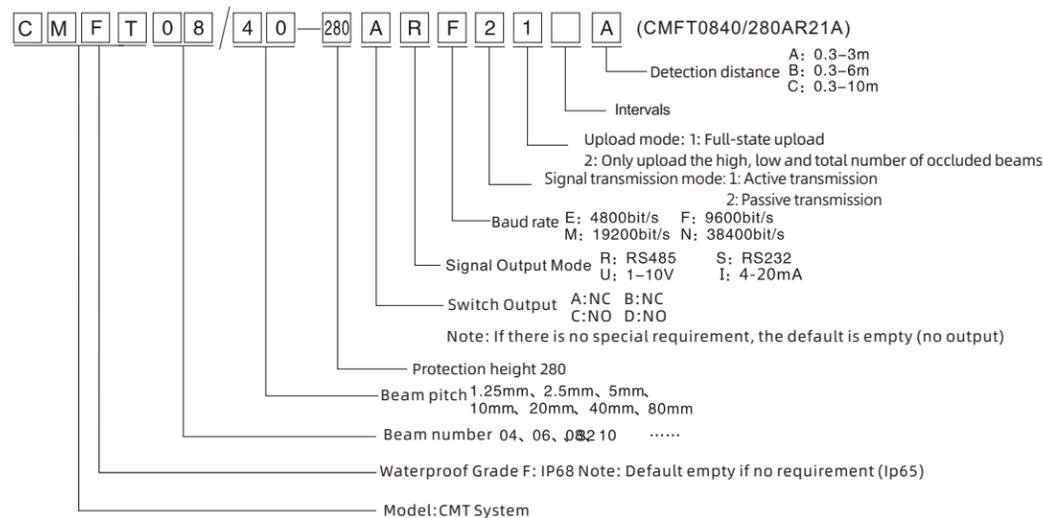

◆ CMT Dimensions

Remarks
 $H = (n - 1) * K =$ Detection height L : Total length of light screen n : Optical axis number $Z = L + 30mm =$ Center Distance of Fixed Mode of Upper and Lower Right Angle Frames
 K : Optical axis spacing $L = P + H + J + 15mm + 15mm$

K (mm)	2.5	5	10	20	40	80
P (mm)	1	4	5	10	10	10
J (mm)	24	24	28	33	33	35

◆ CMT ultra-thin safety light curtain specification sheet is as follows

QL08/40-280 A RA21A: Measure the protective height of 40mm spacing of 8 beams of light curtain 280 mm NPN NC RS485 output baud rate 9600 bit/s passive transmission mode full-state upload detection distance of 3 meters.

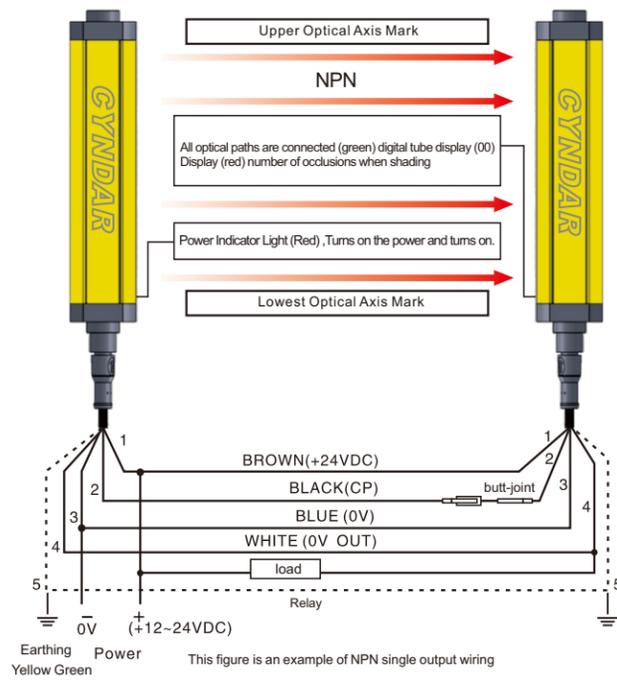

Detailed models can be found on the next page.
