

# Technical description of non isolated safety protection

# More protection / less concern

Psm4 / A31 non isolated safety protection device is related to personal safety. Please read the operation manual carefully before use! The instruction manual is an important document to guide users to correctly install and use the non isolated safety protection device. Agents, dealers and machine tool manufacturers must deliver the instruction manual to users with the optical safety protection device!

#### 1. Product introduction of non isolated safety protection system

Nonisolated safety protection system is used to detect people standing or stepping on in a specific area. In industrial application, it is a safety protection device of automatic equipment, which meets the highest safety protection requirements. The nonisolated safety protection system can detect whether there are people in the laid area within a specific time to prevent personal injury and danger caused by the movement of the machine.

Provide necessary safety protection for personnel working in hazardous areas.

The nonisolated safety protection system has the following advantages:

- 1) The sensing safety carpet has high trigger sensitivity and can provide safety protection for people weighing morethan 30kg.
- 2) The laying area of safety carpet is flexible, and safety carpets of different sizes or shapes can be provided according to user requirements.
- 3) Different types of safety carpets can be selected according to different working conditions and use environment. The correct use of nonisolated safety protection system depends on the following elements:

☐ Determination of wo	rking conditions of installation	area
☐ Correct selection of	laying area size.	
☐ Correct installation	method.	

### 2. Unit matching of non isolated safety protection system

The nonisolated safety protection system is composeoff a safety carpet in a protection area and a matching safety relay. A protection area can be a safety carpet or multiple safety carpet series areas. One area can be connected in series at most

5To 6 safety carpets. The total area of the protection area shall not be greater than 3 to 4 square meters.

#### ☐ This product is normally openwithout resistance. It needs resistance. Please contact our factory before customization. ☐ There are four core wires (black, white, red and yellow), in which black and white are a group of normally open and closed quantities, which will be connected under the action of external force (people step on it), so as to transmit signals to the controller or relay to control the machine. Redand yellow are also a group of normally open and closed values (white and yellow can also be used as a group, black and red as a group). The white and red lines are connected without external force (a group of normally closed points), and so are the black and yellow lines (the normally closed point is only for detection, can not be used as normally closed carpet, and has no function of normally closed carpet. Using this function needs to cooperate with A31 safety relay). ☐ This product is a pressure touch switch, which needs to be used with controller or relay. ☐ Wherfixing the frame, pay attention to the flat groundand fix it at four corners (if any). ☐ This product is not suitable for use in water. If it is used in this environment, please communicatevith our factory in advance.

3. Technical description of non isolated safety protection device components

#### 4. Product selection and technical standards

#### 1) Product introduction

Sensing safety carpet	Psm4type
Adaptive detection range	Detect the presence of operators and items
Recommended occasions	It is applicable to the safety protection of mixed areas of people and small vehicles
Service environment requirements	It is suitable for indoor and outdoor use, and the ambient temperature range is - 10 $^{\circ}\text{C}$ - + 60 $^{\circ}\text{C}$
Safety carpet thickness	14 millimeter
Surface protective material	NBRrubber
Surface pattern and color	Coppercoin, pattern anti-skid surface (black, yellow, red)
Edge banding form	Aluminumedgesealing
Applicable industry	Light and heavy industrial occasions such as paper industry, electronic industry, automobilewelding production line, forging production line, general industrial application and automatic palletizer
Ordering instructions	Provide the size of safety carpet and the size or pattern of safety protection area

#### 2) System technical standards

2) by stem teemile	ai Standarus		
size	It can be specially made according to requirements, with length of 200mm-1000mm and width of 200mm-2000mm		
Underpressure	Dynamic 500kg, solid 700kg		
Surface material	Rubber(red / yellow / Black optional)		
Control level	Shared with controller to reach level 3		
Degreeof protection	IP65		
ambient temperature	-10 °C to 60 °C		
thickness	14mm		
Trigger force	Adult 30kg		
Cable length	3Mand 5moptional		
response time	Less than 30ms		
weight	About30kg/ sq.m		
Chemical resistance	Less than 30ms		
Material ability	commonly		
service life	100Ten thousand times		
waterproof	commonly		
Anti mineral acid	commonly		
Anti organic acid	commonly		
Anti alcohol	commonly		
Anti ethanol	commonly		
Corrosion protection	commonly		
Anti petroleum solvent	commonly		
Anti bio oil solvent	commonly		
type of output	No(normally open)		
Maximum voltage	DC24V		

#### 3) General product specifications

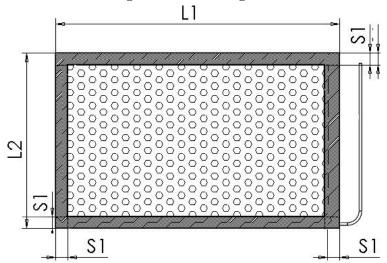

Product model	width	length	type of output	Entry cable
PSM4-250*500	250mm	500mm	NO	4core
PSM4-500*500	500mm	500mm	NO	4core
PSM4-500*1000	500mm	1000mm	NO	4core
PSM4-750*1000	750mm	1000mm	NO	4core
PSM4-1000*1000	1000mm	1000mm	NO	4core
PSM4-1100*1800	1100mm	1800mm	NO	4core

#### 4) Special shaped customization

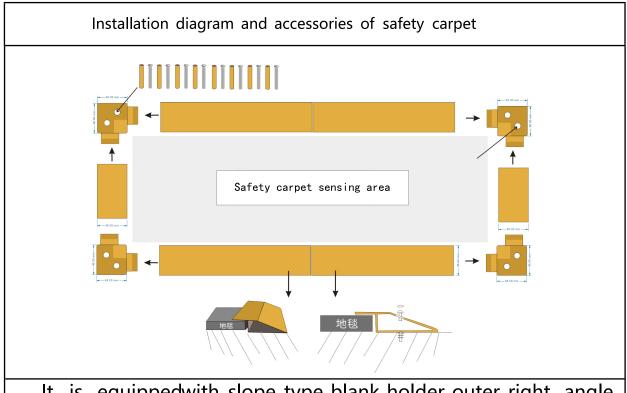

Users can customize the special-shaped design according to the drawings or dimensions, and consult our factory for details.

#### 5. Safety carpet product features

1) Effectivesize and edge non sensing area

- ☐ Effective area of standard safety carpet: L1× L2 ☐ 1.5 m² · For the protection area more than 1.5 m2, it is recommended to adopt the assembly methodof multiple safety carpets.
- ☐ The cable defaults to one corner, and the standard outgoing line is 3M.
- ☐ The edge of the safety carpet package is a nonsensing area, and the edge nonsensing area does not have sensing function.S1≈45mm
- □ Note: whenmultiple safety carpets are assembledinto one assembledsafety carpet, only the edge of non outgoing line can be spliced with the adjacent safety carpet.
  - 2) Saf**ety**carpetinstallatizencessories

It is equippedwith slope type blank holder outer right angle insert, slope type aluminumblank holder strip and several expansion bolts

#### 6. System installation

#### Installation of safety carpet

Please follow the steps below to install the safety carpet

- 1) Unpacking: take out the safety carpet and installation accessories, check whether the contents of the packageare consistent with the packagelist provided, and check whether the safety carpet is intact.
- 2) Preparation of installation site: the installation site shall be flat, and the installation groundshall not have holes with a diameter of morethan 20mm changes in the height of the ground. Any defect in the ground will lead to the loss of the safety function of the safety carpet.
- 3) Removedirt particles from the installation floor and ensure that the surface is dry.
- a. Drill holes on the installation foundation surface according to the position of the installation hole on the aluminumblank holder, and clean the dust on the aluminumblank holder, the foundation surface and the drilling hole (with a vacuumcleaner), otherwise the dust from the drilling will cause unevenness under the safety pad and aluminumsealing edge.
- b. Lay and wire the safety carpet used in series in each area, and connect the signal cable to the safety relay in the control cabinet.
- 4) Connectthe safety carpet and safety relay to the control system of the machine according to the system configuration.

Note: the cable is only used for signal output. The cable must not be draggedfor positioning during the installation of safety carpet.

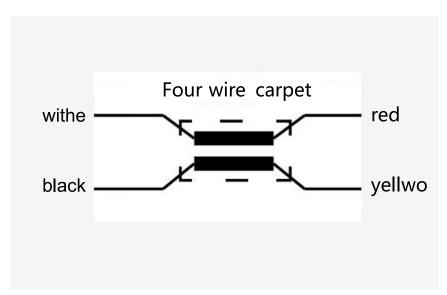

5) According to the working conditions and the type of safety carpet, different types of safety carpet adopt different installation accessories.

#### 7. Wiring instructions

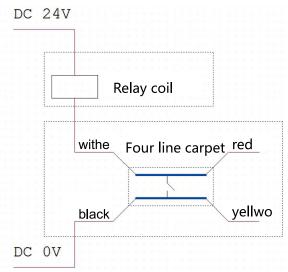

Note: This product must not be in direct contact with the powersupply. It needs the auxiliary use of relay or controller.

The maximum voltage is DC24V

#### Four wire carpet circuit diagram

1) Relay coil wiring diagram- this diagramis not a safe circuit and should be used with caution

This figure is a non safety circuit, use with caution!

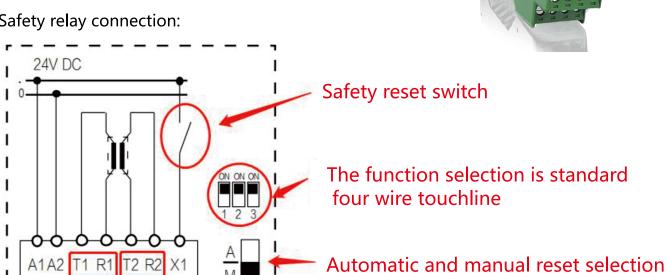

2□Wiring diagram of safety relay Safety relay model: Tner-A31

A1: connect +24V± 10% (20V~26V)

A2: connect 0V

Automatic reset: turn the toggle switch to A Manual reset: turn the toggle switch to M

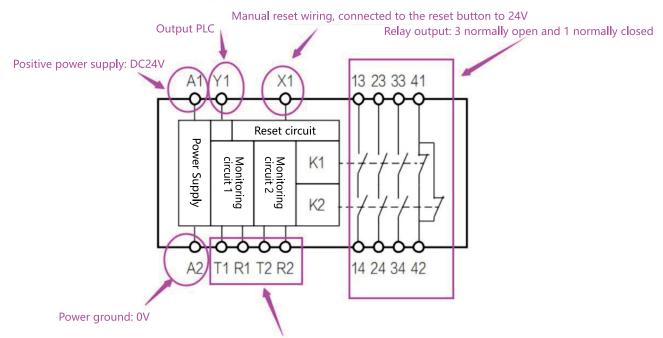

Safety relay connection:

6. Double channel 4-wire touchline / carpet safety input manual reset

White and red are a group, connected to T1 or R1 Black and yellow are a group, connected to T2 or R2 Red line and white line: connected to T1 and R1, regardless of order Black line and yellow line: connected to T2 and R2, regardless of order Or: red line and white line: connect T2 and R2, regardless of order Black line and yellow line: connected to T1 and R1, regardless of order

#### Safety relay system module diagram

Four wire carpet wiring: T1 and R1 are a group, T2 and R2 are a group

This product has the function of testing: whether the wiring of the four wire touch edge is correct and whether the wiring is falsely connected. If the wiring is wrongor the line is falsely disconnected, the safety relay will actively respond to the safety function.

#### Function description of safety relay terminal

A1	Power supply positive (24VDC)	- A1 and A2 as power supply	
A2	Negative pole of power supply (0V)		
T1	Channel 1 signal output	Type I signal source	
R1	Channel 1 safety input	Accept type I signal input, with short circuit, open circuit detection and mutual inspection of channel 2	
T2	Channel 2 signal output	Type II signal source	
R2	Channel 2 safety input	Accept type II signal input, with short circuit, open circuit detection and channel 1 mutual inspection automatic reset: when the input conditions are met, the unit is activated immediately	
X1	Reset input (manual reset or automatic reset can be configured)	Manual reset: the input conditions are met, and the reset circuit is then manually closed. After release, the unit is activated	
Y1	Transistor signal output	Output status signal indication, which can be input as PLC signal or connected to external indicator	
13/14			
23/24	23/24 Normally open instantaneous safety contact	The unit can be externally connected with tner-ts31 unit on the contact to increase the number of contacts	
33/34			
41/42	Normally closed instantaneous safety contact	It can be used as external signal lamp or control other devices	

## Technical parameters of safety relay

Power Supp <b>l</b> y	
Power supply	24V DC
Voltage tolerance	+10%/-20%
power waste	2.9w
output	
Relay safety output	3NO+1NC
Transistor signal output	<500mA 24VDC
Relay contact capacity	
AC-1	6A/250VAC/1500VA
AC-15	4A/240VAC
DC-1	6A/24VDC/150W
DC-13	4A/24VDC
Maximum switching capacity	12A (distributed on all safety output contacts)
contact resistance	<100mΩ
Minimum load	10 mA / 5V
Contact material	AgSn02+0.2μmAu
General parameters	
Output fuse (external)	5A GL/GG
Release response time	< 30ms (from input to output),
Input component end detection resistance (tentacle / carpet)	1ΚΩ~10ΚΩ
Electrical life	80000 lbs
class of pollution	two
working temperature	-25 ° C to 85 ° C
Working humidity	35% - 85% (exposed)
Impulse withstand voltage	2.5kV
Degree of protection	External IP30, sub IP20, IP54 pushed forward
Storage temperature	-40 ° C to 105 ° C
Shell material	Flame retardant PA66
Installation mode	Mark and subtract 35mmdin guide / spring clip
size	114.5mm x 100.5mm x 22.5mm
weight	172g
Connection parameters	
Available cross section range of rigid conductor	0.5~2.5mm²
Available cross section range of flexible conductor	0.5~2.5mm²
Minimum conductor cross section	AWG 24
Maximum conductor cross section	AWG 12
Strip length	8 mm
Minimum tightening torque	0.5 Nm
Maximum tightening torque,	0.6 Nm
Standard application	
	EN 60947-1:2007/A2:2014
	EN 60947-5-1:2004/A1:2009
accord with	EN ISO 13849-1:2015
decord with	EN 62061:2005+A2:2015
	CE

8. Design essentials and configuration of non isolated safety protection system

#### 1) Design essentials of nonisolated safety protection system

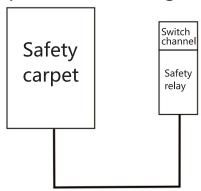

The non isolated safety protection system requires that when a person or protected object enters the protected area, the system shall immediately send a command to stop the machine in the area. The machine can not start working again until the operator sends a command after the person or protected object confirms to leave the protected area. According to the requirements, the design essentials are:

- ☐ The principle of full coverage shall be realized in the safety protection area to avoid personal safety accidents due to personnel in the dangerous area.
- ☐ The safety relay must use manual reset mode, and automatic reset can be used under special circumstances.
- ☐ The manual reset button must be installed in the non hazardous area to ensure the system reset after personnel leave the hazardous area.

#### 2) Configuration of nonisolated safety protection system

According to the area to be protected, it can be the safety protection area of a single safety carpet, or multiple safety carpets can be connected in series into a protection area. The following combination schemes can be selected according to the actual installation conditions and requirements:

Nonisolated safety protection of single safety carpet

#### □ Non isolated safety protection assembled by multiple safety carpets

This combinationis generally used in sensing output mode, single area and multipiece safety carpet assembly. A maximum of 5 to 6 safety carpets for this splicing method. The total area of the protection area shall not be greater than 3 to 4 square meters

Multiple carpets are used in series, and each carpet has four core wires (black, white, red and yellow)

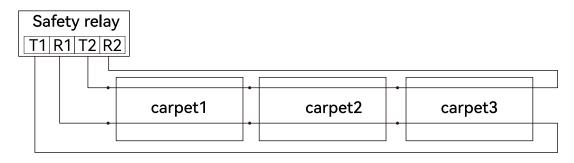

White and red are one way, connected to T1 and R1

Black and yellow are one way, connected to T2 and R2  $\,$ 

perhaps

White and red are one way, connected to T2 and R2

Black and yellow are one way, connected to T1 and R1

#### 9.matters needing attention

#### 1) Storage and installation precautions

# The following actions will cause damage to the safety carpet 80 max. (max.8h) 2 3 4 5 6

- 1. The safety carpet shall not be curled during use, installation and handling.
- 2 do not drill holes or cut the safety carpet.
- 3. The safety carpet cannot be cut
- 4 do not hammer the safety carpet or drive nails (screws) on the safety carpet.
- 5 do not drag the cable, move or handle the safety carpet
- 6. Do not place the overload on the safety carpet for a long time. The maximum bearing capacity is 80kg / cm <sup>2</sup> (8 hours)

#### 2) Precautions for use

- ☐ Be sure to select safety carpet and safety relay with safety function certification.
- ☐ When connected to PLC, it needs to be grounded according to the use requirements.
- ☐ Please regularly check whether the system works normally to ensure its safety function.
- ☐ Please replace the safety carpet beyond its service life in time.
- ☐ Please replace the safety carpet with damaged surface protective layer in time.
