GB/T 19001-2016

Product description

The working principle of the vehicle separation light curtain is to achieve synchronized scanning of vehicles through linear arrangement of infrared light emission and reception. It converts the light signal into an electrical signal to comprehensively detect vehicle data. Compared with other detection technologies, infrared vehicle detection products are technologically mature, easy to install, have high-speed response, strong anti-interference capabilities, and can output rich vehicle technical information. They can reliably detect various types of special vehicles. Infrared vehicle scanning systems are mainly used in general highway toll stations, non-stop toll systems (ETC), automatic vehicle classification systems (AVC), highway weigh-in-motion systems (WIM), fixed over-height detection stations, customs vehicle management systems, and others.

Product application

1. Access control and security: Vehicle classification light curtains can be used in access control systems and security controls. They can detect vehicles entering or leaving specific areas and trigger corresponding operations, such as opening doors or activating alarms.
2. Highway toll stations: In highway toll stations, vehicle classification light curtains can be used to detect the entry and exit of vehicles, as well as vehicle billing. They can accurately measure the length and speed of vehicles to ensure accurate billing and smooth traffic flow.
3. Rail transit systems: In rail transit systems such as subways, light rails, and train stations, vehicle classification light curtains can be used to detect people or objects entering the track area to ensure passenger safety and prevent unnecessary accidents.

protective cover

The protective cover is made of stainless steel or aluminum alloy material to provide protection for the separator. It is equipped with built-in electric heating glass, temperature controller, and humidity controller. It automatically heats up when the humidity is too high or the temperature is too low, ensuring reliable use of the vehicle separator in humid areas, rainy or snowy weather, and cold seasons.

(Order separately)

1. It is specially used for detecting the light curtain when it is installed outdoors to protect the light curtain from impact damage.
2. Built-in electric heating glass can be automatically heated.
3. Internal temperature automatic control, when wet or heavy rain and fog vapor, automatic removal of snow and rain on the glass surface;
4. Box material: stainless steel, cold rolled steel plate, aluminum alloy, etc.
5. Antifogging glass: electric heating wire plus wire safety tempered glass, power 200W/set, power supply 24VDC;
6. Start heating when the temperature is lower than 0 °C (can be set on site); start heating when humidity is above 96% (can be set on site);
7. Overheat protection control: disconnect the heating when the temperature is higher than 45 °C.

Technical data

Basic data	
Product model	QLV series
Contains	A set safety light curtain and protective cover
Suitable for	QT series and QL series safety light curtains
Suitable for number of beams	4, 6, 8.....72
Suitable for beam resolution	20mm, 40mm and 80mm
Detection field height	Detection height ≤1440mm safety light curtains
Protective cover height	1600mm and 1800mm optional (Contact customer service for customization of other sizes)
Protection distance	0.3-5m, 0.3-10m, 0.3-15m, 0.3-20m, 0.3-25m, 0.3-30m (optional)
Glass window length	≤1600mm
Protective cover data	
Shell material	Stainless steel or aluminum alloy material
Window material	Heatable glass
Type of fastening	Floor mounting , Mounting plate
Mounting material	Steel plate
Heating power supply	24V 10A
Main thermostat	Disc package Closing temperature 4°C Disconnecting temperature 29°C
Standby thermostat	Closure temperature of disc packaging 55°C and disconnection temperature 36°C
Humidity switch	Relative humidity of mechanical nylon membrane trigger switch is 20-80%.
Status indicator	Red LED light in front of heater when starting.
Temperature range	Normal operating temperature - 20°C+70°C.
Protection level	NEMA 3R (IEC IP54)

QLV series ordering information

Suitable for: Safety light curtains, Security grating sensors

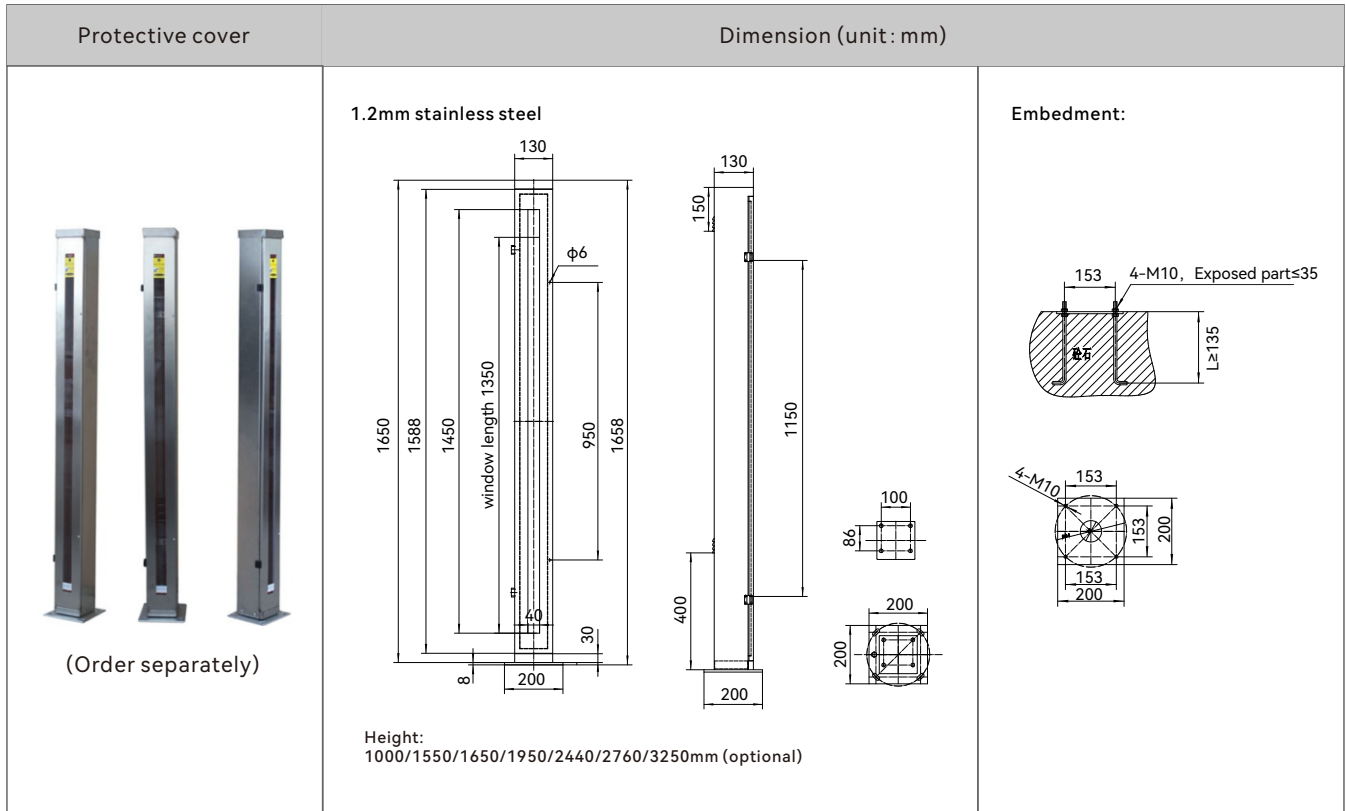

Resolution	Light beam	Protection height (H)	Total height (L)	Product model	Detection distance
20mm (K)	4	60	133	QLV04/40-60	0.3-5m
	6	100	173	QLV06/40-100	0.3-5m
	8	140	213	QLV08/40-140	0.3-5m
	10	180	253	QLV10/40-180	0.3-5m
	12	220	293	QLV12/40-220	0.3-5m
	14	260	333	QLV14/40-260	0.3-5m
	16	300	373	QLV16/40-300	0.3-5m
	18	340	413	QLV18/40-340	0.3-5m
	20	380	453	QLV20/40-380	0.3-5m
	22	420	493	QLV22/40-420	0.3-5m
	24	460	533	QLV24/40-460	0.3-5m
	26	500	573	QLV26/40-500	0.3-5m
	28	540	613	QLV28/40-540	0.3-5m
	30	580	653	QLV30/40-580	0.3-5m
32	620	693	QLV32/40-620	0.3-5m	

Resolution	Light beam	Protection height (H)	Total height (L)	Product model	Detection distance
40mm (K)	4	120	201	QLV04/40-120	0.3-5m
	6	200	281	QLV06/40-200	0.3-5m
