## PHOTOELECTRIC SWITCH SENSOR RETRO-REFLECTION **EGM18 series**

### Contents

- Functional Description
- Application Scenarios
- Technical Parameters
- Size parameters
- Wiring method

## Product Introduction

The EGM18 cylindrical photoelectric sensor series has a round 18 mm housing. Due to its unique design and superior performance, it has a wide range of application scenarios in multiple fields:

Semiconductor Industry

Logistics Packaging

Electronics Manufacturing

Automation Industry

Textile Industry

Printing Industry

1. In automated production lines, it can be used to detect the position, speed and existence of objects, thereby controlling the movement of equipment such as robotic arms and conveyor belts to ensure smooth and efficient production processes.
2. In the metal processing industry, it can be used to detect tiny objects such as metal chips, debris, etc. to ensure the cleanliness and safety of the production process.
3. It can be used for security applications such as intrusion detection and object tracking. When abnormal objects or personnel are detected, the alarm system can be triggered to ensure the safety of the site.
4. In the manufacturing and testing process of electronic equipment, it can be used to detect the position and integrity of components such as circuit boards and connectors to ensure the quality and performance of communication equipment.

## Functional Description

- ⊙ Two scanning ranges are optional;
- ⊙ Free switching between light-incoming action (L.on)/shading action (D.on);
- ⊙ The metal housing is sturdy and durable;
- ⊙ Short-circuit protection and reverse polarity protection functions;
- ⊙ Switching frequency can reach up to 5000Hz;
- ⊙ With 2m cable, fast response time.

## Application Scenarios

Detecting the presence of parts

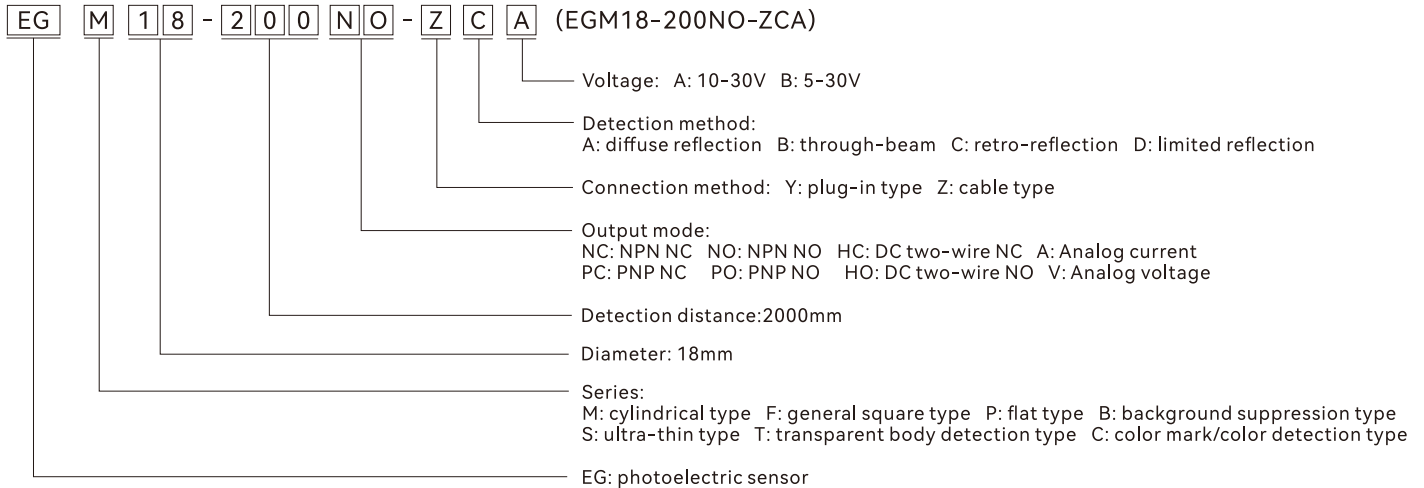

Detecting the presence of packaging bottles

Detecting the positioning of packaging

## Photoelectric sensor model specifications

## Technical Parameters

| Reflection method      | Through-beam  |           |
|------------------------|---|-----------|
| Model                  | EGM18-200   | EGM18-300 |
| Detection Distance     | 2000mm  | 3000mm    |
| Output Mode            | NPN NO / NC, PNP NO / NC  |           |
| Repeat Accuracy        | < 5%  |           |
| Switch Mode            | L.on (light-incoming action) / D.on (light-blocking action) switchable            |           |
| Indicator Light        | Yellow LED  |           |
| Response Time          | <5ms  |           |
| Operating Voltage      | 10~30V DC   |           |
| Consumption Current    | <30mA   |           |
| Load Current           | <200mA  |           |
| Operating Temperature  | -15°C~+55°C, no freezing  |           |
| Environmental Humidity | 35%~95%RH, no condensation  |           |
| Protection Circuit     | Reverse polarity protection/short circuit protection/anti-interference protection |           |
| Protection Level       | IP66  |           |
| Wire Outlet Method     | 3pin/4pin with 2M cable   |           |
| Material               | Nickel-copper alloy   |           |
| Light Source           | Invisible infrared light (880nm)  |           |

### Notes:

- NO**: Normally open. **NC**: Normally closed.
- NPN**: Common positive voltage, negative voltage output. **PNP**: Common negative voltage, positive voltage output.
- NPN NO**: Normally open. When an object is detected, the black line outputs a negative voltage signal.
- NPN NC**: Normally, the black line outputs a negative voltage signal. When an object is detected, the output signal is disconnected.
- PNP NO**: Normally open. When an object is detected, the black line outputs a positive voltage signal.
- PNP NC**: Normally, the black line outputs a positive voltage signal. When an object is detected, the output signal is disconnected.
